Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year, are shown in the table on page 1243.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that business operations during September were uneven, advances in some industries counterbalancing declines in the remainder. Enterprises normally reacting to economic fluctuations were generally less actice in the month under review, while in many cases industries concerned with the production of goods for direct consumption speeded up operations. Judged by contracts awarded and building permits issued, the construction industry obtained less business in September, though the gain in working forces on October 1, indicates that operations were on an extensive scale. One blast furnace at Hamilton was blown out during September with the result that only four furnaces were active in Canada at the end of the month. The output of pig iron was less than in any month since November, 1927, and the output of steel ingots and castings at 55,800 tons was less than in any month since September, 1927. The production of automobiles was at a subnormal level, the output being 7,957 cars and trucks.

Flour and sugar production was accelerated in the last period for which statistics are available. Imports of raw cotton and wool were considerably larger in September, indicating preparations for increased operations. The heavy volume of crude petroleum used by the refining companies was indicated by increased imports, amounting in the month under review to nearly 105,500,000 gallons. While the exports of copper were less than in August, mining operations, measured by an index based on production, exports and receipts at the Royal Mint, were in greater volume than at midsummer. Both imports and exports showed considerable expansion in September. The output of electric power showed a gain in the month, increases being recorded in four of the five economic areas.

Canada's coal output during September amounted to 1,229,883 tons, a decline of 9.2 per cent from the 1925-1929 average for the month of 1,355,103 tons. Mines in Nova Scotia produced 473,307 tons; in New Brunswick, 14,109 tons; in Saskatchewan, 32,789 tons; in Alberta, 546,652 tons; and in British Columbia, 163,026 tons. The output by Alberta mines during the month was at approximately the same level as in September, 1929. Production in the other coal producing provinces declined. Bituminous coal mined during September totalled 857,378 tons, subbituminous coal, 58,724 tons and lignite coal, 313,781 tons .

Imports of coal into Canada were 12 per cent above the five-year average for September and amounted to 2,046,866 tons. During September Canadian importers brought in 511,565 tons of anthracite, made up of 341,207 tons from the United States, 118,780 tons from Great Britain, and 51,578 tons from Russia. Bituminous coal imported totalled 1,534,273 tons, of which quantity the United States supplied 98 per cent. Lignite importations were of minor importance amounting to 1,028 tons shipped from the United States.

Exports of Canadian coal amounted to 67,384 tons, a 19 per cent decline from the September, 1925-1929 average of 83,150 tons. Seventy-two per cent of the current month's exports were consigned to Newfoundland.

Coal made available for consumption in Canada during September, reached a total of 3,209,365 tons, an increase of 3.7 per cent over the five-year average for the month of 3,094,929 tons. The current month's supply consisted of 2,326,346 tons of bituminous coal, 511,565 tons of anthracite, 58,724 tons of subbituminous coal and 312,730 tons of lignite.

EXTERNAL TRADE

A summary of Canadian trade by the Department of National Revenue shows that in September, 1930, the merchandise entering Canada for consumption amounted to $87,900,201 as compared with $77,906,294 in the preceding month and with $99,379,848 in September, 1929. The chief imports in September, 1930, were: Non-metallic minerals and products, $19,243,868; Iron and its products, $15,414,984; Fibres, textiles and textile products, $12,946,897.

The domestic merchandise exported during September, 1930, amounted to $81,046,227, as compared with $69,290,228, in the preceding month and with $87,751,034 in September, 1929. The chief exports in September, 1930, were: Agricultural and vegetable products, mainly foods, $30,392,563; Wood, wood products and paper, $21,188,800; Animals and animal products, $9,146,425.

Strikes and Lockouts

The time loss due to industrial disputes in October, 1930, was slightly less than that occurring during September, 1930, the number of workers involved also showing a slight drop. As compared with October, 1929, the figures for October, 1930, show that while the same number of strikes and lockouts occurred as during a year previously, there was a substantial increase in time loss, while the number of workers involved showed a slight decline. A strike of coal miners in Nova Scotia during October, 1930, involving over one thousand workers for several days, accounted for the increase in the time loss. There were in existence during the month ten disputes, involving 2,219 workers, and resulting in a time loss of 10,397 working days, as compared with eleven disputes, involving 2,599 workers and resulting in a time loss of 13,452 working days in September, 1930. In October, 1929, there were on record ten disputes, involving 2,530 workers and resulting in a time loss of 8,114 working days. At the end of the month there were two disputes recorded as strikes or lockouts, involving approximately 130 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off, or lapsed.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was again lower at $10.32 for October, as compared with $10.38 for September; $11.68 for October, 1929; $11.28 for October, 1928; $10.99 for October, 1927; $10.93 for October, 1926; $10.89 for October, 1925; $10.31 for October, 1924; $10.65 for October, 1923; $10.23 for October, 1922; $11.48 for October, 1921; $15.83 for October, 1920; $16.92 for June, 1920 (the peak); $13.54 for October, 1918; and $7.99 for October, 1914. The most important declines occurred in the prices of beef, mutton, cheese, bread, flour, rolled oats, prunes and potatoes, while seasonal advances occurred in the prices of eggs, butter and evaporated apples. Including the cost of fuel and rent with that of foods the total budget averaged $20.68 at the beginning of October, as compared with $20.75 for September; $21.96 for October, 1929; $21.52 for October, 1928; $21.18 for October; 1927; $21.14 for October, 1926; $21.11 for October, 1925; $20.67 for October, 1924; $21.16 for October, 1923; $20.87 for October, 1922; $22.01 for October, 1921; $26.46 for October, 1920; $26.92 for July, 1920 (the peak); $21.48 for October, 1918; and $14.48 for October, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, continued downward, being 81·4 for October, as compared with 82·5 for September; 96·7 for October, 1929; 95·2 for October, 1928; 97·2 for October, 1927; and 98·1 for October, 1926. In the classification according to chief component materials six of the eight main groups were lower, one was higher and one was unchanged. The groups which declined were: the Vegetables and Vegetable Products group, because of lower prices for grains, flour and raw rubber; the Fibres, Textiles and Textile Products group, due mainly to lower prices for raw silk, raw cotton, certain cotton fabrics and raw wool; the Wood, Wood Products and Paper group, due to lower prices for sulphite pulp and certain lines of lumber; the Iron and its Products group, mainly because of reduced quotations for pig iron, steel billets and tin plate; the Non-Ferrous Metals and their Products group, due to lower prices for electrolytic copper, copper wire bars, lead, zinc and silver; and the Chemicals and Allied Products group, because of lower prices for hemlock extract, shellac and carbon black. The Animals and their Products group was considerably higher, because of increased prices for canned fish, eggs, butter, milk, steers and calves, which more than offset lower prices for hogs, hides and sole leather. The Non-Metallic Minerals group was unchanged.

The Southwestern Ontario Retail Lumber Dealers' Association, at a convention in October, adopted a motion recommending that the Government's unemployment relief fund should be spent upon the erection of public buildings rather than upon grading and similar work, on the ground that the latter class of work gives employment almost exclusively to unskilled foreign labourers, whereas building operations employ all classes of skilled mechanics.

An account of the investigations of Canadian fuels and fuel testing that were carried out during 1928, by the Testing and Research Laboratories of the Mines Branch has just been issued by the Department of Mines. In addition to a general review of these investigations the volume contains special reports of carbonization and briquetting tests on lignite from northern Ontario.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF OCTOBER, 1930

DURING the month of October the Department of Labour received the report of a Board of Conciliation and Investigation which had been established under the provisions of the Industrial Disputes Investigation Act to inquire into a dispute between the employing master plumbers of Saint John, N.B., including those affiliated with the Canadian Construction Association, Saint John Branch, and certain of their employees being members of Local 574, United Association of Journeymen Plumbers and Steam Fitters of the United States and Canada. The dispute affected fifty men directly and from five hundred to seven hundred indirectly, and grew out of the employees' request for an increase of 5 cents per hour in the minimum wage to be effective August 1, 1930. The parties concerned mutually agreed to refer the differences in question to a Board of Conciliation and Investigation. The personnel of the Board was as follows: Reverend C. Gordon Lawrence, Saint John, N.B., chairman, appointed on the joint recommendation of the other board members, Messrs. John N. Flood and F. S. A. McMullin, both of Saint John, nominees of the employers and employees, respectively. The board submitted a unanimous report, the text of which is given below. The report, it will be observed, is accompanied by signed statements on behalf of the parties to the dispute undertaking to be bound by the unanimous decision of the board.

Application Received

An application for the establishment of a Board of Conciliation and Investigation was received in the Department during October from employees of the Temiscouata Railway Company being section foremen, assistant section foremen, sectionmen, snow plough or flanger foremen, bridge and building foremen, carpenters and pumpmen. Fifty-five employees were stated to be directly affected by the dispute, which related to the men's request for increased wages and improved working conditions. The application was under consideration at the close of the month.

Report of Board in Dispute Between Master Plumbers of Saint John, N.B., and their Journeymen Plumbers and Steam Fitters

Re *Industrial Disputes Investigation Act and re differences between certain of the Master Plumbers and Steam Fitters of Saint John, N.B., including those affiliated with the Canadian Construction Association, and certain of their employees, being members of Local No. 574, United Association of Journeymen Plumbers and Steam Fitters of the United States and Canada.*

Senator the Hon. G. D. ROBERTSON,
The Minister of Labour,
Ottawa, Ont.

SIR,—The Board of Conciliation and Investigation, to which was referred the above dispute, has the honour to report that it has done everything in its power to bring about an early settlement.

The following brief summary of facts is submitted as showing the nature and cause of the dispute.

The Local Branch (No. 574) of the United Association of Journeymen Plumbers and Steam Fitters of the United States and Canada was reorganized in 1929, after a lapse of about thirteen years. An agreement between the Union and certain individual employers in the Trade in the City of Saint John was drawn up, and was effective from August 1st, 1929, to July 31st, 1930. The minimum wage rate provided in this agreement was seventy-five cents per hour for competent journeymen plumbers and steam fitters. This minimum rate was an advance of twenty-two and one-half cents per hour over the average wage rate current in this city at the time when the agreement was made. Prior to its expiry, the Union attempted to have the agreement renewed with a new minimum wage rate of eighty cents per hour, effective from August 1st, 1930. This new rate of wages was not acceptable to the employers, and no new agreement was consummated. After a period of uncertainty and dispute, the difficulty was referred to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act.

The organization of the Board followed immediately upon the receipt of notice of the appointment by the Minister of Labour, of Mr. Felix S. A. McMullin, representing the Journeymen Plumbers and Steam Fitters, Mr. John N. Flood, representing the Master Plumbers and Steam Fitters, and Reverend C. Gordon Lawrence as Chairman, Mr. Lawrence being named on the recommendation of the other members. The members were severally sworn on September 5th, 1930, according to the requirement of the Act.

As expeditiously as possible, the Board has carefully inquired into all matters affecting the merits and right settlement of the dispute. Both parties gave the Board the fullest possible co-operation in its effort to learn the conditions affecting the Trade and its relations to the other branches of the Building Trades in the community. The Board made all such suggestions and did all such things as it deemed right and proper for inducing the parties to come to a fair and amicable settlement, but both parties were equally insistent in their expression of inability to meet each other's demands, or to accept each other's offers.

When it became certain that no hope for a settlement by the parties on a mutually agreed rate of wages could be found, the Board requested, and received, from each party a signed written agreement to be bound by the unanimous finding of the Board, which said agreements are enclosed herewith.

The Board has had considerable difficulty in framing a finding which could be presented unanimously. The desire of the journeymen to share in what appears to them a boom of prosperity in the local building industry, was admitted worthy of careful consideration. The argument of the master plumbers that increased labour cost would result in lessened employment by decreasing the ability of the employers to compete successfully with shops that do not observe the union rate of wages, had also to be studied.

The following is submitted as the unanimous finding of the Board:—

(*a*) That the minimum rate of wages for Journeymen Plumbers and Steam Fitters engaged in the building trade in and about the city of Saint John shall be seventy-five cents per hour, up to and including April 30, 1931, and eighty cents per hour from May 1, 1931, up to and including April 30, 1932, and thereafter from year to year, unless a mutually satisfactory agreement to the contrary is entered into before the expiry of a current year, negotiations for such an agreement to be entered into on the application of one party to the other in writing ninety days prior to such expiry.

(*b*) That, for the period laid down in paragraph A, a Joint Conference Board shall be set up, consisting of three representatives of the employers and three representatives of the employees, for the adjusting of any disputes which may arise, all such disputes to be referred to said Joint Conference Board. The Joint Conference Board to sit when necessary, and no strikes or lockouts to be permitted pending the settlement of such disputes by the Joint Conference Board, or failing this, by the operation of the Industrial Disputes Investigation Act.

(*c*) All plumbing and steam fitting work on original contracts in the building trade, signed and under way before the date of the publication of this report by the Department of Labour, shall be completed at the minimum rate of seventy-five cents per hour.

(*d*) The hours of employment for Journeymen Plumbers and Steam Fitters in the building trade, in and about the city of Saint John, shall be as follows: Eight hours shall constitute a day's work for six days, from 8 a.m. to 5 p.m., with one hour out for lunch, except during the months of June, July and August, when they shall quit work at 12 noon on Saturdays.

(*e*) All overtime work shall be paid for at the rate of time and one-half, and at the rate of double time on Sundays and the following holidays, viz., New Year's Day, Good Friday, Empire Day, Dominion Day, Thanksgiving Day, Christmas Day and Labour Day.

(*f*) We would strongly urge concerted action by both parties toward the development of an adequate apprenticeship training system in the plumbing and steam fitting trades, which system might, with advantage, avail itself of the facilities provided by the Vocational Training School.

All of which is respectfully submitted.

(Sgd.) C. Gordon Lawrence,
Chairman.
" John N. Flood,
Representing Employers.
" F. S. A. McMullin,
Representing Employees.

In accordance with Section 63, of Chapter 112 of the Industrial Disputes Investigation Act, we, the undersigned, agree on behalf of the employing master plumbers in Saint John, including those affiliated with the Canadian Construction Association, Saint John Branch, to be bound by the unanimous decision of the Conciliation Board now sitting in the matter of the dispute between Local Union 574, and the employing master plumbers in Saint John, including those affiliated with the Canadian Construction Association, Saint John Branch.

Signed on behalf of the employing master plumbers in Saint John.

Byrne & McGeouch,
Per (Sgd.) J. E. Byrne.
(Sgd.) R. E. Fitzgerald.
Philip Grannan, Ltd.,
(Sgd.) C. P. Grannan.
W. E. Emerson & Sons, Ltd.,
Per (Sgd.) W. E. Emerson.

Saint John, N.B., September 8, 1930.

In accordance with Section 63, of Chapter 112 of the Industrial Disputes Investigation Act, we, the undersigned, agree on behalf of the Local Union No. 574, United Association of Plumbers and Steam Fitters of United States and Canada, to be bound by the unanimous decision of the Conciliation Board now sitting in the matter of the dispute between the Local Union No. 574, and the employing master plumbers in Saint John, including those affiliated with the Canadian Construction Association, Saint John Branch.

Signed on behalf of Local Union No. 574 United Association of Plumbers and Steam Fitters of United States and Canada.

(Sgd.) F. T. BELYEA, *President.*
(Sgd.) J. H. ROBSON, *Secretary.*

Saint John, N.B., September 8, 1930.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Summary of a Recent Decision

ONE new decision was recently given by the Canadian Railway Board of Adjustment No. 1. This Board was established by a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods: the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railway Trainmen; the Order of Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers. Earlier decisions were outlined in the LABOUR GAZETTE, March, 1930, page 269, and in previous issues. The third report of the proceedings of the Board covering the decisions rendered from October 1, 1923, to September 30, 1927, was issued as a supplement to the issue of November, 1927.

Canadian National Railways, Central Region, and Brotherhood of Locomotive Firemen and Enginemen.

In accordance with orders, an engineer and fireman took a locomotive and delivered it at a point 113 miles off, subsequently "deadheading" back to the starting point. They claimed pay for 113 miles on the outward, and 100 miles on the return trip. The chief timekeeper disallowed the claim of the engine crew, deciding to couple both trips together and allowing pay for 140 miles, both trips being thus included as a "continuous service". The employees cited Article 7, paragraph A of the schedule, which by an agreement made in April, 1926, was interpreted as follows:—

"It is understood that crews will be notified when called whether they are for a turn-around or a straight-away trip, and that we would not make it a practice to change the classification of the trip while the men are en route or at the turn-around point, and due precaution would be taken by the supervisory forces ordering the crews to see that the spirit of the article is lived up to. In cases of emergency where conditions make it necessary, however, to change the classification, there would be no penalty imposed on the Railway, but the conditions referred to should be of such a nature as would justify making an exception."

The company contended that the Article in question did not apply to "deadheading" or where "deadheading" and service were coupled. They stated that it had always been the practice to compensate enginemen on the basis of continuous time, regardless of whether the crew had been ordered for a straight-away or turn-around trip.

The Board sustained the claim of the employees.

Representatives of the railway labour organizations of the United States and Canada met at Chicago on November 12 for the purpose of organizing a campaign for a six-hour working day as a solution of the unemployment problem. President A. F. Whitney, of the Brotherhood of Railroad Trainmen, in a statement issued before the meeting, said that committees would be organized at the Chicago conference to campaign all over the country to save two hours from the working day. Similar action was taken in 1916, when as a result the working day on the railway was cut from ten to eight hours. Mr. Whitney explained that a five-day week was a more popular suggestion in the shopcraft divisions and among office workers, but that the six-hour day was the more feasible plan for the operating unions because it was better suited to train services. "Something like a 40- or 42-hour week seems the most logical working arrangement for the operating unions," he concluded.

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1930

THE number of strikes and lockouts in existence in Canada during October, 1930, was ten, as compared with eleven during the preceding month, the number of workers involved and the time loss incurred showing a correspondingly slight decline. As compared with October, 1929, the figures for October, 1930, show that while the same number of strikes and lockouts occurred as during a year previously, there was a substantial increase in the time loss, although the number of workers involved showed a slight decrease. A strike of coal miners in Nova Scotia during October, 1930, involving over one thousand workers for several days, caused most of the time loss for the month.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Oct., 1930	10	2,219	10,397
*Sept., 1930	11	2,599	13,452
Oct., 1929	10	2,530	8,114

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Two disputes, involving some 1,400 workers, were carried over from September, and eight disputes commenced during October. Eight of these ten disputes terminated during the month, two in favour of the workers, four in favour of employers, and the results of two were recorded as compromises. At the end of October, therefore, there were on record two disputes recorded as strikes or lockouts as follows: hosiery factory workers, Guelph and Mount Dennis, Ont., and ornamental iron workers, Vancouver, B.C.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to four such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926, one employer; photo engravers, Toronto, Ont., January 7, 1929, one employer; motion picture projectionists, Vancouver, B.C., June 23, 1930, one employer; and bakery drivers, Saskatoon, Sask., Sept. 22, 1930, one employer.

The dispute involving coal miners in one colliery at Mercoal, Alta., included in the above list since July, 1930, is reported to have been called off by the Mine Workers' Union of Canada toward the end of October, 1930. The dispute arose through the demand of the Mine Workers' Union for an agreement with the company, claiming that the majority of miners in the mine had joined that union; but the company renewed a closed shop agreement with the United Mine Workers of America, following which about 35 per cent of the employees ceased work and picketted the mine. On September 27, two of the pickets were sentenced to one month's imprisonment and $50 fine and two others were sentenced to six months, on conviction of being members of an unlawful assembly and taking part in riots in July (Labour Gazette, September, pp. 1021-1022).

Information as to a strike of coal miners at Inverness, N.S., which occurred in September was received in the Department too late for publication in the October issue of the Labour Gazette. Employees of one company ceased work on September 23 objecting to the suspension of four employees for violation of the Mines Act. The following day the strikers resumed work and as a result of negotiations between the representatives of the employees and the management the suspended employees were reinstated on the understanding that in future the mining laws would be strictly observed.

Coal Miners, Springhill, N.S.—As reported in the last issue of the Labour Gazette, the strike of employees in the three collieries of one company, commencing September 27, to secure piece rates for a new section of longwall mining, higher than those offered by the company, was terminated early in October, work being resumed on October 7, 1930, as a compromise on the rate had been agreed to for a three months' trial.

BAKERY DRIVERS, SASKATOON, SASK.—As reported in the last issue of the LABOUR GAZETTE, the strike of bakery drivers for one company, who ceased work on September 2 demanding the discontinuance of special canvassers, was unterminated at the end of September, but early in October at the request of the union for mediation a representative of the Department of Labour proceeded to Saskatoon and negotiations were resumed. The union had attempted to secure a union agreement providing for higher wages, and the management had offered to take back the strikers if they would give up membership in the union. The bakery company belongs to a chain having establishments in a number of cities, and the general manager also reached Saskatoon during the negotiations. The management agreed to re-employ as many of the strikers as were needed when the routes were reorganized and withdrew its stipulation as to giving up union membership. The general manager stated that it was not the policy of the company to prevent any of the employees from joining unions, and that many of their bakers and drivers in their various establishments were

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1930

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to October, 1930.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Springhill, N.S....	1,400	7,000	Commenced Sept. 27, 1930; for higher piece rates; terminated Oct. 7, 1930; compromise.
MANUFACTURING—			
Vegetable Foods—			
Bakery drivers, Saskatoon, Sask.	17	150	Commenced Sept. 22, 1930; alledged discrimination against union workers; employment conditions no longer affected by end of October, 1930; in favour of employer.
(b) Strikes and Lockouts Commencing during October, 1930.			
MANUFACTURING—			
Fur and Leather Products—			
Fur trimmers, Toronto, Ont...	350	1,750	Commenced Oct. 16, 1930; for union wages and working conditions; terminated Oct. 22, 1930; in favour of workers.
Clothing (including knitted goods)—			
Men's clothing factory workers, Montreal, P.Q.	150	75	Commenced Oct. 7, 1930; to maintain union conditions; terminated Oct. 7, 1930; in favour of workers.
Textiles—			
Hosiery factory workers, Guelph, Ont., and Mount Dennis, Ont.	127	324	Commenced Oct. 29, 1930; against reduction in wages; unterminated.
Iron, Steel and Products—			
Ornamental iron workers, Vancouver, B.C.	6	100	Commenced Oct. 16, 1930; for increase in wages; unterminated.
CONSTRUCTION—			
Buildings and Structures—			
Bricklayers, Regina, Sask.	80	640	Commenced Oct. 15, 1930; for employment of union members only on Civic Hospital; terminated Oct. 24, 1930; city provided for union conditions on future civic contracts.
Plasterers, Toronto, Ont.....	50	250	Commenced Oct. 17, 1930; union jurisdiction; terminated Oct. 23, 1930; in favour of employer.
Electricinas, Ottawa, Ont.....	14	98	Commenced Oct. 24, 1930; for employment of union members only; terminated Oct. 31, 1930; in favour of employer.
SERVICE—			
Public Administration—			
Labourers (highway), near Sydney, N.S.	25	10	Commenced Oct. 20, 1930; for increase in wages; terminated October 21, 1930; in favour of employer.

members of unions. A small number of the workers on strike were offered reinstatement, and some of them returned to work, but the union refused to call off the strike. As reports indicated that employment conditions were no longer affected by the end of the month, the dispute is recorded as terminated, but is transferred to the list in an earlier paragraph of disputes not called off by the unions although employment conditions are no longer affected.

Fur Trimmers, Toronto, Ont.—Employees in thirty-six establishments, including thirty-two fur shops and four cloak factories, ceased work on October 16, 1930, to secure union wages and working conditions. On October 22 work was resumed, the employers having signed an agreement with the union providing for the eight-hour day and forty-four hours per week with not more than two and one-half hours over-time, with payment for over-time at the rate of time and one-quarter; and wages rates with an average increase of fifteen per cent; also equal division of work during slack periods.

Men's Clothing Factory Workers, Montreal, P.Q.—A number of employees in three establishments, men's clothing factories, ceased work on October 27, 1930, to enforce union conditions, particularly to prevent sending out of work to non-union contractors. Work was resumed the same day, the employers agreeing to the demands of the union.

Hosiery Factory Workers, Guelph, Ont.—Employees in two silk hosiery manufacturing establishments in Toronto and Guelph operated by the same company ceased work on the twenty-ninth and thirtieth of October respectively against decreases in wages reported to be seventeen and one-half per cent and thirty-five per cent. At the end of the month no settlement had been reported.

Ornamental Iron Workers, Vancouver, B.C.—Employees in four shops engaged in ornamental iron and bronze work went on strike at various dates during October, to secure an increase in wages from $7.50 per eight-hour day to $10. At the end of the month no termination had been reported.

Bricklayers, Regina, Sask.—Bricklayers on various jobs throughout the city ceased work on October 15, demanding that a sub-contractor for brick work on the power house of the Civic Hospital should hire union bricklayers only, or should give up the contract. The union had a closed shop agreement with the contractors' association, and held that the employment of non-union men on this work constituted a violation of the agreement. The city fair wage schedule provided for union wages and hours, and the City Council decided to include in future contracts for the city provision that work on such construction would be subject to the agreement between the union and the association of contractors. Work was resumed on October 24, 1930.

Plasterers, Toronto, Ont.—Plasterers on one building ceased work on October 17, 1930, as the result of a jurisdictional dispute with carpenters as to work in connection with a substitute for plaster. It was claimed that this work had been given to carpenters by the Board of Awards of the American Federation of Labor, but it appears that the dispute arose from a decision to use this substitute because the plasterers had objected to the specifications for plastering work. Work was resumed on October 23, the dispute having been settled between the two unions.

Electricians, Ottawa, Ont.—A number of electrical workers, inside wiremen, employed by a sub-contractor on one building ceased work on October 24, demanding that another sub-contractor employ union members only. There were some reports that other building trades would also cease work, but it was finally decided that a sympathetic strike would not be called as the main contractor was fair to organized labour. Work was resumed by the electricians on November 1, 1930.

Labourers (Highway), near Sydney, N.S.—Twenty-five labourers on a provincial highway near Sydney, N.S., ceased work on October 20, demanding an increase in wages from $2.80 per eight-hour day to $3.20. It was reported that about one hundred men remained at work, and, when the strikers saw that the other workmen would not join them, some returned to work at once and others, about ten, resumed work the following day. Others again did not return to work and were replaced.

There was an increase of 6·9 per cent in the estimated cost of buildings in the United States in September as compared with August, according to reports received by the United States Bureau of Labour Statistics from 291 comparable cities. The estimated cost of the building operations for which permits were issued in these 291 cities during the month of September was $147,748,370. Both new residential buildings and new non-residential buildings increased, comparing September permits with August permits. The increase in residential buildings was 2·3 per cent and in non-residential buildings 9·8 per cent.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1930, in the review of Strikes and Lockouts in Canada and Other Countries, 1929. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

Great Britain

The number of disputes beginning in September was 18, and 20 were still in progress from the previous month, making a total of 38 disputes in progress during the month, involving 6,300 workpeople and resulting in a loss of 41,000 working days. Of the 18 disputes beginning in September, 3 arose out of proposed reductions in wages, 6 on other wages questions, 5 on questions respecting the employment of particular classes or persons, 2 on questions of trade union principles and 2 on other questions. Settlements were reached in 18 disputes, of which 3 were in favour of workpeople, 4 in favour of employers, 11 ended in compromises; in 7 other disputes work was resumed pending negotiations.

In the dispute in the Yorkshire woollen industry which was reported in the LABOUR GAZETTE for May, June and July, although the great majority of the workers returned to work in June, a small number of overlookers remained out until September when they returned to work on employers' terms, thus terminating the dispute.

Germany

The number of disputes occurring in the second quarter of 1930 was 68, involving 1,425 establishments and 17,189 workers with a time loss of 204,682 working days. Corresponding figures for the first quarter of the year are 61 disputes involving 1,377 establishments and 17,438 workers with a time loss of 114,878 working days.

A strike of 126,000 metal workers at Berlin began on October 15, in protest against the award of a Government arbitrator recommending reductions in wages of from 6 to 8 per cent, as a part of the Government's new economic construction policy. It was reported that the strike was terminated on October 28 when both parties agreed to resume work at the old wage scale pending adjustment by a board of arbitration.

Netherlands

Revised figures for the year 1929 give the number of disputes as 214, involving 1,274 establishments and 19,500 workers. The total time loss for the year was 939,000 working days.

Sweden

The number of disputes reported for the year 1929 was 180, involving 489 establishments and 12,676 workers. The time loss for the year was 667,000 working days.

United States

The number of disputes beginning in August was 38, and 32 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 8,634 and the time loss 173,245 working days for the month.

The strike of children's dressmakers in New York city, which began on August 26 and was mentioned in the LABOUR GAZETTE for September, was settled on September 4, when it was reported that the former agreement was renewed with a minimum wage scale to be decided by an impartial chairman.

The strike of 4,000 textile workers at two mills at Danville, Virginia, which began on September 30, and was mentioned in the LABOUR GAZETTE for October, was still in progress at the end of October.

By letter of October 6, 1930, the Minister of Labour of Canada informed the International Labour Office that the Conventions and Recommendations adopted by the Twelfth (1929) Session of the International Labour Conference were receiving consideration from the law officers of the Crown in Canada, whose attention had been directed to the requirements of paragraph 5 of Article 405 of the Treaty of Versailles, regarding the submission of the decisions of the Conference to the competent authority. The Minister also stated that the Draft Conventions and Recommendations adopted by the Fourteenth (1930) Session of the International Labour Conference had been referred to the law officers.

UNEMPLOYMENT RELIEF ACT, 1930

Measures Taken in Co-operation With the Provinces, Municipalities and Railways

THE September issue of the Labour Gazette (page 1050), contains a summary of the proceedings of the special session of the Parliament of Canada, beginning September 8 and concluding September 22, summoned specially to deal with problems arising out of exceptional economic conditions with resultant unemployment. One of the measures enacted during the session was the Unemployment Relief Act 1930, under the provisions of which the sum of $20,000,000 was appropriated for the relief of unemployment under terms and conditions to be approved by the Governor General in Council. In the October issue (page 1140), reference was made to the agreements with the Provinces and the Railway Companies and regulations approved by the Governor General in Council were set forth.

The amounts allotted for public works and undertakings in the various provinces in accordance with the regulations are as follows:—

Nova Scotia	$ 700,000
Prince Edward Island	90,000
New Brunswick	500,000
Quebec	2,850,000
Ontario	3,850,000
Manitoba	900,000
Saskatchewan	1,000,000
Alberta	900,000
British Columbia	900,000
Yukon	20,000
For the railway Grade Crossing Fund (from which fund, under the provisions of the Railway Act, contributions are made for the purpose of obviating dangerous level crossings)	500,000

In addition to the foregoing, the Canadian Pacific Railway Company and the Canadian National Railways have agreed to advance contemplated construction and improvement programs from one to three years, the Government agreeing to compensate them by paying the interest on the estimated total expenditure for a period of eighteen months at the rate of 5 per cent per annum. The undertakings thus projected and commenced are to be completed within one year at a total cost of about $23,000,000. A list of these works is given at the close of the present article.

In the last issue of the Labour Gazette, reference was made to the agreements which were being made by the Dominion Government with the respective provinces. The text of the Order in Council issued by the Government of Ontario in reference to the administration of the Unemployment Relief Fund is appended to the present article.

The co-operation of the provinces and municipalities, and also of the railway companies, has been secured in arranging that the recruiting of the workers to be employed in the work assisted from the unemployment relief fund shall be done through the local offices of the Employment Service of Canada.

A list of localities and extent of expenditures for relief work in each locality is being furnished to the public press from time to time, so that the public, and particularly the unemployed, may have knowledge of opportunities for employment that are thus created.

The provinces are submitting their proposals for provincial and municipal work and undertakings under the agreements entered into with the Dominion government. The following joint expenditures have been approved by the Minister of Labour up to November 11:—

Expenditures Approved as at Date November 11, 1930

Nova Scotia	$ 109,100
Prince Edward Island	180,000
New Brunswick	406,300
Quebec	10,000
Ontario	10,069,667
Manitoba	469,940
Saskatchewan	1,381,841
Alberta	.....
British Columbia	1,325,482
Yukon	5,000
	$14,399,180
Canadian Pacific Railway Company	11,514,000
Canadian National Railway (approx.)	11,139,650

Village of Gibson's Landing—	
Opening and grading streets	400 00
Village of New Denver—	
Grading and gravelling streets, and cement sidewalks	1,800 00
	$1,132,850 00
Municipal public works	188,632 00
Provincial undertakings	4,000 00

Particulars of the above not yet received.

Construction Program of Canadian National Railways

The Canadian National Railways, by arrangement with the Dominion government, will undertake a wide program of construction, the government undertaking to assume the interest charges on the special program for a limited period, in order that these projects may be proceeded with at an earlier date than would otherwise have been the case.

The program provides for work in practically every section of the Dominion, including the following:—

Saint John, N.B.—The Canadian National Railways have recently constructed a new train shed and an office, baggage, mail and express wing. It is now proposed to build the head-house of the station proper.

Quebec City—Elevation of tracks and construction of subway by which traffic will cross underneath the railway at Canardière Road.

Chicoutimi, Que.—Relocation of certain portions of the company's line involving certain grade separations.

Oshawa, Ont.—Subway to be constructed under company's tracks.

Toronto, Ont.—Express company garage and additional store building to be constructed; St. Clair Avenue grade separation, Newmarket subdivision, providing for elevation of tracks with subway underneath.

Brantford, Ont.—Cut-off to be constructed around the north of the city of Brantford, to re-route freight trains on more favourable grades. This project is covered by a branch lines bill.

London, Ont.—Two subways to be constructed at once at Richmond and Wellington Streets. This is a part of the work contemplated under the agreement between the city of London and the National Railways respecting grade separations, new station, etc. The completion of the whole project is to be spread over a number of years.

Sudbury, Ont.—Bridge over Canadian Pacific and Algoma Eastern Railways tracks, which is being rebuilt on a slightly different location.

Fort William, Ont.—Freight shed to be constructed to replace structure destroyed by fire a few weeks ago.

Prairie Provinces.—One hundred and forty miles of tracklaying to be undertaken on new branch lines in the Prairie Provinces. In order to procure used rails for this purpose, it is necessary to lay new and heavier rail over 100 miles of the company's main line trackage in Western Canada.

In the matter of rails and ties, it is the intention of the Canadian National to place orders for rather more rails and ties than was originally contemplated.

Work is also proceeding rapidly on the Montreal terminal project, a number of contracts having been awarded and several others being pending.

The program outlined above is that which was laid down and approved by the government in the recent conference with the railways. It is in addition to the program which the company had already arranged to commence this fall and winter and in addition also to the extensive works which are now in progress in various parts of the Dominion, which will be carried through to completion.

Construction Program of Canadian Pacific Railway

Mr. E. W. Beatty, President of the Canadian Pacific Railway Company, in an address at Yorkton, Saskatchewan, on October 1, outlined the plans of the Company under the agreement with the Dominion Government as follows:—

"After conference with the Federal Government, an arrangement has been entered into whereby in consideration of the assumption by the Government of interest charges for a specified period on the capital expenditure involved, the Company will immediately embark on certain works, which had been approved for the future but which in ordinary course would not have been approached until 1931 or 1932. In framing the program, we have had particularly in mind the desirability of providing some relief to the agricultural industry by furnishing work for farmers and their work animals, and by carrying transportation facilities to these districts where the length of haul of the railway imposes an undue burden on the producer's time and resources. Other works on the list are designed to absorb as much as possible of the surplus labour in the towns and cities.

"The program follows:—Track will be laid on the branch line now graded from Crossfield westerly a distance of twenty-eight miles, and on the Lacombe and North Western Railway from thereby to a point of junction with the Calgary and Edmonton line twenty-two miles. Construction will proceed on the section of the Nipawin Prince Albert line from the end of the present grading to Henriburg, a distance of approximately twenty miles, from Medstead to a point on the Debden-Meadow Lake line, a distance of thirty-five miles, from Gunnworth to Rosetown, a distance of twenty miles, and from Hamlin easterly for a distance of twenty-five miles, and on the Kettle Valley Railway a link will be built connecting the tracks at the north end and the south end of Dog Lake. Rock ballasting will be taken in hand on an extensive scale on the Lachute subdivision, on the Galt subdivision, and on the Algoma district, all in eastern Canada.

"Gravel ballasting will be done on the New Brunswick district. One hundred miles of track in Ontario will be relaid with a heavier rail section, and one hundred and fifty miles of the heaviest rail section so far used in Canada will be laid in British Columbia. The manufacture of these rails will provide much employment in Canadian steel plants, in addition to the labour involved in the actual track work. It is intended also to start at once on the task of providing more commodious station accommodation at Regina. Plans of the station building and track lay-out are now practically completed. Contracts for the grading of the branch lines will probably justify entering on some grade revision work along the Thompson River in British Columbia and provision has been made for the necessary outlay."

Administration of the Unemployment Relief Fund in Ontario

Order in Council

Order in Council approved by The Honourable the Lieutenant-Governor, dated the 14th day of October, A.D. 1930:

Upon the recommendation of the Honourable Geo. S. Henry, Acting Prime Minister, the Committee of Council advise that Your Honour may be pleased to approve the following recommendations for the administration of the Unemployment Relief Fund:

1. Except where the context otherwise requires in this Order in Council the expression "Minister" means the Minister of Public Works and Labour.

2. There shall be reserved and paid out of the moneys appropriated by Special Warrant dated 14th October, 1930, one-third of the expenditures of municipalities for direct relief where suitable work cannot be provided for the unemployed, in addition to one-third to be paid by the Dominion Government, and

one-half of direct relief in unorganized districts, in addition to one-half to be paid by the Dominion Government.

3. The Minister may enter into an agreement with any municipality for the payment by the Ontario Government of one-third of the said municipal expenditures for direct relief, in addition to one-third to be paid by the Dominion Government.

4. The Minister may enter into an agreement with any municipality for the payment to such municipality by the Government of Ontario of twenty-five per centum of the cost of such public works and undertakings as may be necessary to provide suitable work for the unemployed in addition to twenty-five per centum of the said cost to be paid by the Dominion Government, and that fifty per centum of the said cost shall be assumed and borne by the municipality.

5. The Minister may enter into an agreement with the Government of Canada for the carrying on by the Ontario Government of public works, improvements and other undertakings that will assist in providing suitable work for the unemployed, the cost of such public works and improvements to be borne by the Ontario and Dominion Governments in such proportions as may be agreed upon.

6. All agreements made with municipal authorities involving the expenditure of any portion of the moneys appropriated by the Act for public works or undertakings shall contain provisions for the payment of fair wages and hours of work in accordance with the intent of the Fair Wages and Eight Hour Day Act, 1930, and the Fair Wages Policy of the Government of Canada as set forth in Order in Council (P.C. 1206), dated 7th June, 1922, and amendments thereto. Agreements involving the expenditure of any portion of the said moneys for public works or undertakings shall contain a provision to the effect that all persons employed on such public works or undertakings shall be, as far as practicable, residents of the locality in which the work is being performed, and that in no case shall discrimination be made in the employment of any persons by reason of political affiliation.

7. Statements of accounts for expenditures by municipalities for direct relief or for public works and undertakings made under the provisions of this Order in Council shall be rendered monthly in duplicate accompanied by a certificate of the appropriate municipal authority that expenditures have been duly made in accordance with such statements.

8. The Minister may at any time require the municipality to furnish information, detailed or otherwise, in connection with statements of account rendered by the municipality.

9. The administration of this Order in Council shall be vested in the Minister of Highways, the Minister of Public Works and Labour, the Minister of Lands and Forests, the Minister of Agriculture, and the Minister of Mines, and they shall be an advisory committee on expenditures to be made under this Order in Council.

10. Mr. J. A. Ellis is hereby appointed Secretary of such advisory committee.

11. All payments hereby authorized shall be made on the certificate of the Secretary of such advisory committee countersigned by the Minister of Public Works and Labour.

MEMORANDUM

Ontario Unemployment Relief

Relief may be granted to municipalities as provided for in the annexed Dominion and Ontario Orders in Council and Regulations.

An application for a grant must be made to the undersigned by the Council of the municipality.

The following requirements must be observed:

1. It must be shown that the unemployment conditions existing in the municipality at the time of the application are acute and serious and worse than usual, and that the funds asked for are for emergency work to relieve the situation. Figures should be given if possible to show the number of persons in the municipality out of employment, and whether or not they are likely to remain unemployed, and if so for how long.

2. Labour to be employed in the construction of works in respect to which aid is granted must be distributed as widely as possible amongst the unemployed. Where there is not sufficient work for all the unemployed on full time it should be endeavoured to give them all work for some time.

3. It is very desirable that work should be provided if possible before direct relief. Grants for direct relief will only be made in respect to the excess over and above that usually expended by the municipality.

4. Grants will not be made for works which have already been undertaken by the municipality whether such works have been commenced or not, but grants will be made where new works are undertaken primarily to relieve unemployment.

5. In making grants preference will be given to those works for which the largest possible amount of labour will be necessary.

6. If possible works should be undertaken for which the municipality already has legislative authority. Where this is not the case the fact should be stated in the application.

7. Applications for grants in aid of grade separation must be made to the Dominion Railway Board.

8. In making application for grants for the construction of works an estimate of the cost of the work, and of the amounts to be expended for labour must be furnished. Also when it is proposed to commence and complete construction. No payment will be made by the Province in respect of any excess cost of such estimate.

9. Applications for direct relief must be accompanied with a statement showing the direct relief expended by the municipality each month since 1st October, 1929.

Address all communications to J. A. Ellis, Secretary, Ontario Unemployment Relief Fund, Parliament Buildings, Toronto.

UNEMPLOYMENT SITUATION IN THE UNITED STATES

PRESIDENT Hoover recently announced new plans for strengthening the organization of the Federal Government's activities to stimulate employment in the United States during the coming winter. A summary of the existing situation in regard to unemployment and the measures taken for its relief, is given below:

Extent of Unemployment

Estimates of unemployment, ranging from 1,874,000 to 8,000,000, led the United States Senate some time ago to direct its Committee on Labour to investigate the causes of unemployment and the proposed methods for its control. Upon a recommendation of this Committee, which Congress adopted, the Bureau of the Census undertook this year for the first time to collect scientifically acceptable statistics of unemployment in the United States. Preliminary returns from the unemployment census of 1930 have been compiled and published to date for the entire country, for States by counties, and for cities of 100,000 or more. These census figures, so far as they go, shed the first trustworthy light upon the total number of persons out of work. Persons not at work on the day preceding the enumeration were defined by the Census Bureau in seven classes, as follows:

Class A—Persons out of a job, able to work and looking for a job.
Class B—Persons having jobs, but on lay-off without pay, excluding those sick or voluntarily ill.
Class C—Persons out of work and unable to work.
Class D—Persons having jobs, but idle on account of sickness or disability.
Class E—Persons out of a job and not looking for work.
Class F—Persons having jobs, but voluntarily idle, without pay.
Class G—Persons having jobs and drawing pay, though not at work (on vacation, etc.)

On August 23, 1930, the Director of the Census announced that, according to preliminary returns covering the entire continental United States, the total number of persons usually working at a gainful occupation who were reported at the time of the census in April as without a job, able to work, and looking for a job (Class A), amounted to 2,508,151, or 2·0 per cent of the total population of the United States (122,698,190). It is estimated that the number of gainful workers is probably not far from 40 per cent of the total population—that is to say, 49,079,276. Thus the total number of persons in Class A was 5·1 per cent of the established number of gainful workers. The percentages of unemployment (Class A) given for the different states ranged from 0·5 per cent of the total population in South Dakota and Mississippi, to 3·2 in Rhode Island and New Jersey, and 3·3 per cent in Michigan. Preliminary figures for Class A for the 94 cities of 100,000 inhabitants or more showed that Duluth, a mining centre, had the greatest unemployment percentage, with 5·4 per cent of the population without jobs, able to work and looking for jobs. Detroit was second, with 5 per cent. Next in order were Camden, New Jersey, with 4·7 per cent; Lowell, Massachusetts, New York City, and Cleveland, with 4·6 per cent; Indianapolis and Portland, Oregon, with 4·4 per cent; and Chicago with 4·3 per cent.

Official figures for Classes B to G are not yet available. It is expected, however, that Class B will prove to be the most numerous group; 1,000,000 has been mentioned as a conservative prophecy of the total number of persons in this class. The Bureau of the Census has estimated that Classes C and D will include at least 765,000 persons. In order to arrive at an approximately accurate picture of the present unemployment situation, there should be added to the Class A figure of

2,508,151 (in addition to the figures for Classes B, C, and D) the net increase in the population since the Census owing to admission for permanent residence of immigrant aliens. On account of the downward trend of employment indices during this period there is no reason to believe that any appreciable number of these immigrant aliens has found work. Moreover, the Class A figures should be supplemented by the number of persons graduated from educational institutions, able and willing to work, who have not found employment. A careful unofficial recapitulation of the Census, immigration, and school and college figures, to present an estimate of the total extent of unemployment in the United States, recently appeared, as follows:

Census returns—

Class A	2,508,151
Class B (estimated)	1,000,000
Class D (estimated)	765,000
Net increase in number of employable immigrant aliens, April to September, inclusive	30,000
Estimated number of school and college graduates in 1930 who have neither entered other educational institutions nor found employment.	500,000
Total	4,803,151

According to this summary some 4,800,000 persons—about 4 per cent of the total population, or almost 10 per cent of the number of persons gainfully employed—are unemployed in the United States. This estimate, of course, is not complete, since it does not include net reductions in employment since April, when the census was taken. Nevertheless, the figures afford a fair measure of the number of unemployed persons able and willing to work on the census date, and a basis from which to estimate the subsequent trend of unemployment.

No attempt has been made officially to supplement the Census figures, but in view of reductions in the number of employees reported for the iron and steel, automobile, and lumber industries over the past five months, it seems reasonable to believe that current unemployment figures would show a substantial increase over the Census enumeration of April last.

President's Emergency Committee

In any case, the announcement of preliminary figures from the Census returns, and the recent demonstrations by unemployed in widely separated sections of the country have moved the Administration to renewed interest and another attempt to remedy the situation. In this connection, President Hoover, after conferring with a number of business and industrial leaders, announced on October 17 that he had formed a special committee of the Cabinet to formulate and submit to him plans for strengthening the organization of Federal activities for employment during the coming winter. The committee, which, with one exception, consists of members of the Cabinet, has as its chairman Mr. Robert P. Lamont, the Secretary of Commerce. The other members are the Secretaries of the Treasury, Interior, Agriculture, and war departments and the Chairman of the Federal Reserve Board. The three branches of activity which Mr. Hoover recommended to their attention will be pursued simultaneously in plans to push governmental construction of public works, to encourage remedial State action, and to promote the co-operation of private industries.

The work of carrying out the Cabinet Committee's program will be largely in the hands of Colonel Arthur Woods, former Police Commissioner of New York City, who has been appointed by the President to organize industrial and other forces for relief work. Colonel Woods has a national reputation as an able administrator and public leader. His achievements as Police Commissioner of New York City and as organizer of unemployment relief in 1919 and 1921 were noteworthy. Colonel Woods arrived in Washington on October 23 and immediately took over his new duties. Meantime, announcements of co-operation have reached him from Federal, State, and municipal authorities.

Measures to Create Employment

Several federal departments have taken direct action to extend employment. The United States Shipping Board has announced the temporary abandonment of a reorganization plan, thus saving positions for 700 men and women. The Postmaster General has issued an order suspending all overtime work for regular employees in his Department, and has directed that this work be performed by part-time substitutes. Post Office employees will be limited to their regular eight-hour shifts, making it possible for others to obtain work as substitutes at the regular rate of 65 cents per hour. The War Department has taken action to "stagger" employment on flood-control work on the Mississippi River project. In this connection the Secretary of War stated that: "Employing 2,000 men for three days a week, instead of 1,000 for six days, would at least provide a meal ticket for the greater number." He added that he was considering expanding the system through his Department's entire construction operations as an emergency measure for winter employ-

ment. In another field the Departments of State and Labour are co-operating to restrict the immigration of labour from abroad through the refusal of visas to persons considered liable to become public charges, strict examination of new arrivals at the border, and rigorous application of the contract labour laws.

Municipal Activities

The following activities of municipal authorities may be mentioned. On October 18 the City of New York passed an appropriation of $1,000,000 for unemployment relief, this being the first time that any fund toward the alleviation of unemployment has been voted by the city. An equal amount was recently appropriated by the City of Boston for the same purpose, and a citizens' committee has been appointed to raise an additional $2,000,000 by soliciting public subscriptions. An Associated Press despatch, dated October 21, reported that in Detroit the recognized relief agencies now are supporting 15,000 families and 1,000 single men. The total number of unemployed in Detroit was estimated at 100,000. The United Press reported on October 21 that a $1,000,000 program to provide work for at least 12,000 unemployed was started in Minneapolis on that date.

Prospects for Winter

The Federal Reserve Board's report for September indicates that employment in manufacturing establishments increased less than is usual at this season, the increase being chiefly in fruit and vegetable canning, and in clothing industries, while reductions in the number of employees were reported for the iron and steel, automobile, and lumber industries. The most encouraging news from industry during the past week was an announcement by the Fisher Body Corporation that ten of its plants outside of Detroit would be stepped up from three days a week to full week basis.

Present indications are that unemployment will occasion many hardships over the next few months. Nevertheless, no immediate legislative relief is seriously contemplated, except possibly to secure from Congress in December authority to make funds immediately available for speeding up the construction of public works already authorized by law. With strong possibilities of a deficit already manifest, the Treasury is not likely to favour any very large expansion of the already enormous building program for which appropriations have been voted.

Co-operation with Local Authorities

For the first time in dealing with unemployment—a matter of public concern and controversy since the President's conference on Unemployment of 1921—the Administration is giving less consideration to "public works" as a solution, and has apparently reached the conclusion that fundamentally the problem is one that must be chiefly dealt with through the State and municipal authorities. This, at any rate, is the aspect of the problem which is now being emphasized. The President, in announcing the appointment of his Cabinet Committee (now referred to as the "President's Emergency Committee for Employment"), said: "There are three directions of organization in which the Federal Government's activities can co-operate. First, co-operation with Governors and employment organizations of the States and local committees; secondly, development methods with the national industries; and thirdly, in directing Federal employment in public works, etc." In subsequent oral statements the President is reported as stressing the urgent need for co-operation with the local authorities as a leading factor in the solution of the problem.

National Survey Conference

Nearly a year has elapsed since relief was promised "by development of methods with national industries" and through creation of jobs by the expansion of Federal and State "public works." It will be recalled that ten months ago the President brought to Washington leaders of industry, commerce, labour, and agriculture, in the interest of stimulating business and to formulate plans for increased employment. The outcome was the organization of the National Business Survey Conference Committee, representative of approximately 150 organized lines of trade and industry. Measures designed by this Committee to sustain business levels and absorb slack in unemployment include:

(1) Vigorous prosecution of necessary public works programs by federal, state, and local governments.
(2) Prompt attention to private construction needs.
(3) Utilization of the next few months by private business to make necessary extensions, betterments, replacements and renovations of plant and equipment.
(4) Concentration upon home modernization.

The Committee worked vigorously for about three months. During the summer, however, a slackening in its activities was noticeable, and while it is possible that the committee's

efforts to combat business depression may have contributed in a measure to sustaining employment, its accomplishments fall short of what had been prophesied by the Administration. On October 26 Mr. Julius H. Barnes, Chairman of the Committee, made public a summary of economic conditions in the United States for the first nine months of 1930. The Committee placed no interpretation upon the facts published in the summary. Although it was mentioned that "in the preparation of this summary several factors were apparent," the Committee was content to note two among the many trends: "The large amount of new capital confidently provided for productive purposes, and evidences of stabilization or advancing tendencies in prices of raw materials."

The summary offers a slight contrast to the facts published last June in the same manner. At that time, slightly more than six months after the sharp decline of the Stock Market in October, 1929, a mixed situation was reflected, with continued slackness in many lines and encouraging signs in others. Now, one year after the stock market decline, in the new summary there is perhaps slightly more tangible evidence of advancement in certain lines, reflecting a recovery, however sluggish, in basic business. Touching upon world business conditions, the Conference Committee found more favourable conditions principally in Canada, Belgium, the Netherlands, Japan, and China, and said: "While generally abroad the business dullness has not lifted, there are promising signs of stable conditions and also of improvement in a variety of industries scattered throughout many of the countries included in the survey."

Work of Federal Government

When one reviews the actions of the Government of the United States during the last year to relieve unemployment one finds that rather more public works are being constructed than in normal times; direct employment by the government is being stretched to spread over more workers the same amount of work and wages; immigration has been limited; appropriations in aid of state highway construction have already been increased and will probably be further augmented; fuller information concerning unemployment than was before available has been collected; and the establishment has been undertaken of a proper statistical system.

The main emphasis has been on co-operation and co-ordination—with states, municipalities, industries, trade unions, charities, Boards of Trade and other interested bodies. The new cabinet Committee and other national bodies are expected to prove useful as disseminators of information, and as a means of combating panicky reports. In the small area in which the Federal Government can directly extend employment, these bodies may achieve a good deal. Outside that area their efforts may help to restore confidence, and the data which they are accumulating should at least permit a fairly accurate picture of national conditions to be drawn. One can feel certain that no new remedy for the relief of unemployment has been attempted; and there is no likelihood that the present Administration will consider any such scheme as unemployment insurance. In President Hoover's recent speeches on economic conditions before the American Bankers' Association and the American Federation of Labor the public is being urged to buy more; the farmer is being told that the way to prosperity for him is the curtailment of his operations by restricting his acreage in staple crops; the cure for "technological unemployment" is said to be new inventions to create new wants to satisfy which new factories will be required.

Eight-Hour Day in Argentina

A report prepared by the Statistical Division of the Argentine Ministry of Labour states that no worker employed in an industrial undertaking, workshop or wholesale trading establishment in the federal capital has worked more than eight hours a day since 1920. This statement is based on the results of an inquiry carried out in 1924, the assumption being that the position has not changed since then.

The Argentine Government on December 12, 1929, promulgated an Eight-Hour Day Act which came into force on March 12, 1930. Various difficulties have arisen in connection with the enforcement of this Act, and the legislative division of the Ministry has received many requests for explanations from the employers' and workers' organizations concerned. One of the chief difficulties was that of discovering whether the Act did or did not abrogate the provisions of the Act regulating the employment of women and children under 18, which fixes the daily hours of work at eight for women and six for children, with a six-day week, with no provision for a Saturday half-holiday. There was thus a danger that women might be placed in a less favourable position than men, who were entitled to the Saturday half-holiday under the new Act. The authorities propose to issue a new Decree providing for equality for men and women in regard to the distribution of the 48 hours of work in the week. The new Act further provides that in unhealthy workplaces hours may be reduced to six in the day or 36 in the week.

PROPOSED BOARD OF CONTROL FOR THE MINING AND DISTRIBUTION OF COAL IN AUSTRALIA

THE Royal Commission on the Coal Industry appointed by the Australian Government in May, 1929, recently presented a voluminous report containing recommendations for the reorganization of the industry. The two main causes of the recent depression were found to be the over-capacity and overmanning of the mines and the spirit of hostility between capital and labour. The problem of the Commissioners, therefore, was first, to find some practicable means of making the productive powers of the collieries conform to the demand, and, second, "to substitute for the spirit of hostility that has led to incessant disputes, a degree of co-operation between the employers and employees, comparable at least to that which does exist in other industries." In regard to the first of these problems the commission had to consider the difficult questions as to which mines should cease to operate, how the displaced miners should be provided for, and what financial provisions should be made for reaching these objectives. A further urgent problem was to suggest some immediate result from "the mischief that is being done by the continuing high price of coal."

Various suggestions for re-organizing the industry are discussed in the report. "The aim," it is stated, "must be to devise a method of dealing effectively and promptly with selling prices and industrial disputes, of meeting as speedily as possible the existing troubles connected with over-capacity and over-manning, of providing and enforcing a defined policy for the future conduct of the industry and of ensuring a greater measure of co-operation between capital and labour than has prevailed up to the present time."

The Commissioners discuss the following proposed methods of dealing with the situation in the industry: (1) nationalization; (2) collective contracting; (3) profit sharing and industrial co-partnership; (4) rationalization; (5) publicity of facts and intensive control.

They discuss the advantages and defects of nationalization, concluding with the statement that "no one in the industry has submitted an argument in favour of nationalization, and, on the ground of expense, if for no other reason, it would appear to be completely impracticable".

Collective contracting also is found to be still in a highly experimental stage and to be open to many objections.

On the subject of rationalization the report points out the length of time that would be required for the introduction and development of reorganization, the limits of its efficacy, and the possibility of a more direct and effective method of procedure in Australia.

Industrial co-partnership or "profit and prosperity sharing" is among the recommendations of the Commission, subject, however, to the proviso that no such measure can succeed unless the evil of the over-capacity of the mines has been dealt with first.

Proposed Board of Control

The main proposal of the Commission is for the appointment of a Board of Control consisting of three members, which would be vested with almost complete authority in regard to the production and distribution of coal. Such a body, it is stated, should be carefully selected without regard to the political affiliations of the members. "The endeavour should be to procure the services of a chairman of sound training and recognized tactfulness and with ability to weigh evidence, and of two colleagues of proved business ability preferably having in addition special qualifications in economics, engineering or accountancy. The assistance would also be required of an expert staff comprising members trained in accountancy, statistics and mining engineering, who should retain their status and privileges in the civil service if drawn from that source."

The functions and powers of the proposed Board will enable it to give effect to the following reforms in the industry:—

(1) The elimination of uneconomic mines or those which cannot, after internal reorganization providing for adequate remuneration to capital and labour, produce coal at a price competitive with that of other mines similarly dealt with. This step, by abolishing over-capacity and intermittency and thus ensuring to every colliery the opportunity of working full time, will on the actual records of costs of production, mean a large saving without any further adjustment and thereby increase the margin of profit.

(2) The restoration of a proper measure of discipline and managerial control. The effect of this reform will necessitate the elimination of surplus employees and the greater efficiency of those retained, the removal of the troubles

16387—3½

of absenteeism and the "darg"* and of objections to the introduction of coal-cutting machines and other mechanical equipment, and the modification or abolition of the system of "cavilling."† By this means, a further substantial saving in costs of production can be obtained.

(3) The adjustment and reduction of rates of wages and the restriction of "consideration" payments to an extent sufficient to restore substantial parity between the rates paid in the coal-mining and other industries. The actual extent of the necessary adjustments and reductions will be in the hands of the Board; but, as already mentioned, this Commission has assumed certain rates, for the purpose of applying a test, which conform with the basic rates of general application in New South Wales and still leave the opportunity to mine workers to earn a greater average income than in past years. The savings in the cost of production under this heading also are large.

(4) The fixation of selling prices of coal in such a way as to reduce excessive profits and to ensure only a fair return on the actual capital that is ascertained, after inquiry and valuation to be employed in the industry.

(5) A reasonable reduction in freight charges.

In addition to the savings mentioned in the preceding statement, the Commission is of opinion that further possible reduction in the price of coal may be effected by—

(*a*) The introduction of a centralized system of electric power supply to collieries. It is anticipated that by means of the scheme outlined by an expert for the purposes of the Commission, costs of production may be benefited to the extent of from 2d. to 5d. per ton excepting the southern field.

(*b*) The amalgamation of interests. In this connection, it is recommended that exemption should be allowed from payment of ad valorem duty on any transfers of colliery assets that are made to give effect to the combination of one or more undertakings.

It is recognized that some considerable time must elapse before the legislatures of the Commonwealth and of the State of New South Wales can frame and put in force the necessary enactments to enable the proposed Board to fully exercise all its essential functions. The Commission therefore considers it to be imperative that action should be taken immediately to provide some measure of temporary relief. It is recommended, accordingly, that the Board should be appointed forthwith, and its powers limited in the first instance to determining and fixing a maximum selling price for coal in each district of New South Wales, and the wage rates and labour conditions that should operate until the Board can be clothed with the necessary authority to carry into effect the whole scheme which has been outlined above.

* This term is applied to a practice whereby the local lodge determines the number of skips of coal which shall be the maximum produced by a pair of miners per shift. Miners claim that it is a method of providing for the even distribution of available skips to the miners throughout the pit.

† The practice of drawing lots every quarter for the working places in a mine.

FARMERS' CO-OPERATIVE MARKETING AND PURCHASING IN THE UNITED STATES, 1920-30

THE position of farmers' co-operation in the United States is described in a pamphlet entitled "Co-operative Marketing and Purchasing, 1920-1930," just published by the United States Department of Agriculture. In 1930 there were 12,000 associations, in addition to several hundred farmers' organizations formerly engaged in co-operative marketing, which have ceased to function as marketing enterprises, although the associations still continue their corporate existence, and in many cases own plants, such as creameries, cheese factories, grain elevators, warehouses, etc., which are rented to other marketing agencies.

The 11,400 associations listed in 1928 had an estimated membership of 3,000,000. This membership represented approximately 2,000,000 farmers. Nearly one-third of the farmers engaged in buying or selling together were members of farmers' elevator associations, and about one-fifth belonged to co-operative creameries, cheese factories, or milk-marketing associations. The study, which was made by the division of co-operative marketing of the United States Department of Agriculture, did not take into consideration memberships in credit societies, mutual insurance companies, or mutual telephone companies. Had such memberships been included the percentages would have been much higher than those given. Co-operative intensity varies greatly from State to State. In those States in which the merits of the co-operative method of do-

ing business have long been recognized, the farmers seem to be members of more different enterprises than in those States in which co-operation has become of importance only in recent years.

Classes of Societies

Co-operative cotton-marketing associations have decreased in number since 1915. However, the associations functioning to-day are transacting a much larger business annually than was the case 14 years ago. The 125 associations listed by the department in 1928 had an estimated membership of 140,000, and for the 1927-28 marketing season transacted business amounting to nearly $100,000,000. Nearly one-half of the associations listed were in Oklahoma and Texas. The other leading States as regards number of associations were Georgia and Alabama.

More associations were engaged in the handling and marketing of dairy products in 1928 than in 1925. The estimated business for 2,197 associations listed in 1925 was $535,000,000, whereas the estimated business for 2,500 associations listed in 1928 was $640,000,000. This indicates an increase in amount of business of approximately 20 per cent for the three years. The largest group among the associations handling dairy products is that which includes the co-operative creameries. More than 80 per cent of these associations are located in three adjoining States, namely, Minnesota, Iowa, and Wisconsin. The 1,400 associations in the entire group handled about 500,000,000 pounds of butter in 1928 and the associations in the three States named above handled more than 73 per cent of the creamery butter made and marketed by co-operatives.

Approximately 120,000,000 pounds of cheese was handled in 1928 through the 740 co-operative associations listed by the United States Department of Agriculture. More than 77 per cent of the total co-operative cheese was handled by associations located in Wisconsin, and approximately 90 per cent of the total by the associations in Wisconsin, Oregon, and Minnesota. There was a decline in co-operative activity as regards the manufacture and marketing of cheese during the two years from 1926 to 1928. In the earlier year 32.5 per cent of all cheese produced was handled by co-operatives, whereas the percentage for 1928 was but 28.1.

Associations of producers for assembling fluid milk and marketing the same either at wholesale or retail or both in the larger cities are of fairly recent origin. A considerable quantity of fluid milk is marketed co-operatively through price-bargaining associations. These organizations confer with the milk distributers in the cities to which the members deliver milk and determine the price that shall be paid by the dealers to the producers. Deliveries are made direct to the milk dealers, who, in most cases, pay the producers direct, except for a small deduction paid to the association. There are nearly 50 active milk-bargaining associations. More than 100,000,000 pounds of milk was marketed in 1929.

A slightly larger number of associations engaged in the marketing of fruits and vegetables was listed by the Department of Agriculture in 1928 than in 1925. Among the fruits and vegetables that are important in co-operative activity are citrus fruits, apples, grapes, and potatoes.

In 1928 there were listed by the United States Department of Agriculture, 3,455 associations that were engaged in the marketing of grain. These associations had an estimated membership of 900,000 and transacted business to the amount of $680,000,000 in 1927-28. The number of associations listed at the beginning of 1930 was 3,448. More than 85 per cent of all the associations were located in 10 of the North Central States. This group of organizations had 85 per cent of the estimated membership for all associations and handled 82 per cent of the business for the 1927-28 marketing season.

There are to-day more than 2,000 local live stock shipping associations and there are 28 terminal market sales agencies. In 1928 the shipping associations had an estimated membership of 450,000 and were forwarding to market live stock with a sales value of $320,000,000. More than 85 per cent of the total membership was in the eight States of Iowa, Illinois, Minnesota, Missouri, Ohio, Indiana, Wisconsin, and Michigan. Eighty-eight per cent of the live stock shipped co-operatively was forwarded to market by the associations in the same eight States. Sixty per cent of the total co-operative shipping is by the associations in Iowa, Illinois, and Minnesota.

The 40 farmers' associations engaged in marketing nuts co-operatively had an estimated membership in 1928 of 15,000 and transacted business to the amount of $14,600,000 during the 1927-28 marketing season. Most of the associations were located in California.

Ninety associations marketing poultry or eggs or both had an estimated membership in 1928 of 50,000 and handled business to the amount of $40,000,000 during 1927-28. The largest number of associations was in Minnesota.

CHILD PROTECTION AND MOTHERS' ALLOWANCES IN SASKATCHEWAN

THE annual report of the Bureau of Child Protection of Saskatchewan outlines the administration of the Child Welfare Act and The Old Age Pensions Act during the fiscal year ended April 30, 1930. The information contained in that section of the report relating to old age pensions is reviewed quarterly in the LABOUR GAZETTE.

Mothers' allowances in Saskatchewan are administered by the commissioner of the Bureau of Child Protection, who is appointed under the Children's Protection Act. Under the provisions of the Mothers' Allowances Act of 1922 (now incorporated in the Child Welfare Act) the Legislature makes an annual grant, to be spent in monthly payments in order to provide support or partial support for the dependent children, under sixteen years of age, of any woman who by reason of poverty is unable to take proper care of her child or children. The commissioner has authority in regard to all applications for allowances, subject to the minister in charge of the Act.

In stating the policy of the administration the report emphasizes the importance of maintaining the sense of parental responsibility and points out the "general superiority of the foster home as a substitute for the natural home over any type of institutional service." There are 1,377 children placed in foster homes which are regularly inspected by the field force of inspectors.

The total number of wards as at April 30, 1930, including those of Children's Aid Societies, was 1,565. During the year 1929 there was a total of 340 wards discharged, while the commitments during the same period were 212. Since the inception of the work there have been 3,698 children made permanent wards of the Bureau by Court orders and legal surrenders where it was not possible to make parents or relatives responsible for their care. This number does not include those made wards of children's aid societies.

In order that the local communities may be made responsible for child welfare work, volunteer agencies have been established in 23 points in the province under the provisions of the Act. These child welfare committees report to the Commissioner and offer a point of contact where he may get in touch with cases arising in the respective towns and districts, which seem to require the attention and help of the Bureau.

Mother's Allowances.—The annual report of the Mothers' Allowance Branch of the Bureau states that the number of mothers supported and amount expended indicate the same steady increase as was shown in former years, but in view of the failure of the crop in 1929 and the difficulty of obtaining employment for the older children, many mothers found it necessary to apply for assistance who had in former years been able to finance themselves without assistance from public funds.

The report observes that "in comparison with other parts in Canada the amount expended is much below the average paid in other provinces who have in force similar legislation, and also, with the exception of British Columbia, Saskatchewan is the only province where the provincial government bears the whole of the cost, the other provinces dividing the cost with municipalities."

The number of widows receiving allowances as at April 1930, was 1,426; the number of dependents, 344; the number of guardians 30, while the total number of children under sixteen years of age was 5,465. During the fiscal year ended April, 1930, the total amount paid in allowances was $467,575. The average paid per receipient was $23.52, and the average paid hper child was $7.63.

In addition, the report of the Bureau deals with juvenile offenders, feeble-minded and other defective children, the legal adoption of children, and the children of unmarried parents.

The Police Magistrate at Ottawa, in a decision given on November 13, ruled that when a workman accepted an I.O.U. for part of his wages, his only way to recover the money was through the civil courts. The workman in this case had for several weeks received an I.O.U. for $5 as part of his wages, on the understanding that they would be paid so soon as business picked up. The claim was for the amount of the I.O.U's and two days pay additional.

All available members of the Police Department were instructed by Mayor Walker to take a census of the unemployed and needy in New York City, on October 23. He announced that recreation piers and the Bronx Terminal market and other municipal buildings would be thrown open to the homeless and that minor employees of the city would be asked to contribute $1 a month for relief, while citizens would be requested to send clothing for the needy to the police station.

FAMILY ALLOWANCES IN BELGIUM

IN the Labour Gazette, August, 1928, page 868, a summary was given of a new act which was passed in Belgium in that year amending the existing system of family allowances. The 1928 act required all contractors for public works carried out or subsidized by the State, the provinces or the communes, and all manufacturers to whom a contract to the value of 50,000 francs or more is given by the State, the provinces or the communes, to join an approved compensation fund for the payment of family allowances. (A compensation fund is a pooling arrangement for the even distribution of the costs of family allowances.) This Act is to be superseded by an Act of August 4, 1930, the provisions of which are to be made effective not later than July 1, 1932, and the object of which is to extend and develop the system of family allowances in Belgium. Compulsory membership of a fund for the payment of family allowances is to be imposed on all employers, including State, provincial and communal administrative departments and undertakings, except in cases where the workers live on the employers' premises. Artisans who work directly to the orders of their customers, and who, apart from members of their family, are assisted by only one or at most two workers under 20 years of age, are also excepted.

Provision is made for three types of fund: approved compensation funds, special funds approved or set up by Royal Decree, and an auxiliary compensation fund. In order to be approved, the compensation funds must ordinarily have a membership of at least seven employers, employing at least 1,500 persons. The special compensation funds will be established for employers employing dock labourers and other workers whose occupation is of a casual nature, and who customarily work for more than one employer. The auxiliary compensation fund is to be established by the Government for those employers who, at the date when the Act comes into force, are not members of any existing approved compensation fund or special fund.

The State, provincial and communal authorities may pay the allowances directly, and are then regarded, for this purpose, as compensation funds. This privilege may also be extended to the National Railway Companies and other public utility undertakings.

The rates of contribution to the compensation funds payable by member employers are to be 65 and 35 centimes for each day of actual work performed by male and female workers respectively. The contributions will be payable monthly or quarterly, and, in addition, a share in the cost of the administration of the fund to which they belong will be payable by employers.

Provision is also made for the establishment of a National Family Allowance Compensation Fund, to which all the other funds will be affiliated. The National Fund will receive an annual State subsidy of 30 million francs, and, in addition, amounts, to be distributed among needy funds, will be paid into it by approved funds when the total amount received by the latter in contributions exceeds the amount required for payment of the minimum rate of allowance. The subsidy of 30 million is to be used exclusively for the payment of allowances in respect of the third and subsequent children, and will be distributed in the first place among the approved and other primary funds which are unable to pay the minimum statutory scale. A surplus will then be distributed among all the primary funds throughout the country for payment in respect of all third and subsequent children. In addition the National Fund will be responsible for payment of allowances to certain specified classes of workers who do not receive allowances from the ordinary funds, including workers who live on their employers' premises, victims of industrial accidents, etc.

The minimum monthly scale of allowances, which are payable until the child reaches the age of 14 years (or 18 in the case of children continuing their full-time studies or covered by an approved apprenticeship contract), is fixed at 15 francs for the first child, 20 francs for the second, 40 francs for the third, 70 francs for the fourth, and 100 francs for the fifth and each subsequent child. Other scales, however, may be authorized provided they are not less favourable to the beneficiaries. Payment of the allowances may be either monthly or quarterly, and is calculated on the basis of the number of days actually worked, no deduction, however, being made for breaks occasioned by sickness, accident, involuntary unemployment, or other justifiable reason for absence.

An emergency employment committee in New York City, composed civic, industrial and financial representatives, held a meeting towards the end of October, and agreed to assist in a plan to raise $150,000 a week to be used by the Charity Organization Society and the Association for Improving the Condition of the Poor to provide work for heads of families in Manhattan and the Bronx.

REPORT ON THE FEASIBILITY OF A CONTRIBUTORY HEALTH INSURANCE SCHEME IN MANITOBA

By Dr. E. S. Moorhead, Chairman of the Welfare Supervision Board, Department of Health and Public Welfare of Manitoba

IT is impossible to enter on the subject of the application of Health Insurance to the province of Manitoba, until we have made a short survey of the trend of social economics, and the remedial legislation which has been brought into being during the last few decades to mitigate the disabilities of those who work for a daily wage.

Medical Service in the Past

May I take you back to an early stage in English history, where you will find that much of the medical service was supplied by the monks, and hospital accommodation was provided in the monasteries. We still have terms in medicine which show this influence, such as Friar's Balsam, Jesuit Bark from which quinine is obtained and Monk's Hood or Aconite. St. Bartholomew's Hospital was founded in London by a monk in the year 1123. We then take a jump to the reign of King Henry the Eighth. The Crown seized the monasteries, ejected the monks, and organized medical service, as far as we know, ceased to exist. After a long period, three events took place which were associated with the beginning of a new economic system in England, a system which was to draw the inhabitants from purely agricultural pursuits. These were the developments of industry; the migration from country to town, and the erection and endowment of hospitals.

In the past, and until quite recently, the daily wage earners were included in the penniless group when sickness, accident or old age overtook them. They were entirely dependent on private or voluntary charity, and it was almost obligatory on the wealthy to leave some form of endowment to assist their less fortunate brethren. When the sufferings of the poor became greater than the relief supplied by voluntary organizations, it was recognized that some form of official recognition must be taken, and some relief given. This was administered in a crude and unsympathetic manner by parish, municipal or county officials, who seemed to take pleasure in increasing the distress of the poor by pointing out the stigma attached to support at the expense of the taxpayer. Dickens in several of his books did much to force this point of view on the attention of England; and from that time, though the progress has been slow, a different outlook has arisen.

Beginnings of Public Insurance

During the last fifty years, it has come to be recognized that the man who has spent his life, or has become sick or injured in the service of the industry of his country, is entitled to something more than a haphazard charity, or a grudging existence in a work or almshouse. When this was accepted it appeared that the State alone should be required to provide any comforts necessary, but by degrees it came to be acknowledged that such a scheme could not be carried on indefinitely, nor to the extremes which the socialist element demanded. It discouraged thrift, it cast an increasing burden on the taxpayer, and at a time when industrial output was diminishing, and huge expenditures had to be met, the state decided that benefits must be paid for, in part, by the recipient of them. It is at this period that we find plans brought forward whereby benefits were secured by a form of insurance; to which the insured, the employer and the State subscribed in varying proportions. These were the steps which led by slow degrees to the present state of affairs in social economics. It must be remembered that there is a marked difference in the application of the regulations to the different subscribers, depending on the political outlook of the party in power. On one side, we have the condition in Russia where all contributions are made by the employer, as opposed to Roumania where the employee pays all the premiums. There remains that condition which we find in many of the newer countries, when the state or province assume the whole responsibility, and the employer and the employee make their contributions indirectly through general taxation. It would be wise to make a brief study of those systems which have proved to be most popular in the older countries, with a view to fitting them into the economic system of the younger countries.

Features of a Contributory Scheme

Take the system where the employer, the employee and the state contribute certain fixed sums per week; this presupposes several premises:—

First, that a large percentage of the population can be placed in the relative positions of employer and employee. While this holds good in highly industrialized communities, it

is not at all applicable to this country. Here, we have the farmer, who for several months of the year may be quite independent, even to the extent of being an employer of labour; during the remainder he may be an employee working in a lumber camp or other winter occupation.

Second, that a week's, or a month's work will represent a definite sum which will be paid at regular periods and over a fixed number of months in the year. We have two difficulties—the farmer employer never knows until his crop is sold what his average weekly wage will be; in case of local or general disaster, the weekly wage may be non-existent; similarly, the employee of a farmer may fail to recover the wages which were promised to him owing to such misfortunes as hail, drought, or, an unsold crop; further, while it has been possible in the past for actuarial departments to make an accurate estimate of the weeks of employment which may be expected by every working man, the world-wide wave of unemployment has upset all these calculations, and countries are finding that the subscriptions of the employer and employee are much less than had been anticipated, and that the only form of adjustment which can be made, if the pledge made to the employee is to be kept, results in a larger share of the cost being shouldered by the State.

Thirdly, the success of an insurance scheme presupposes a reasonable fixity of residence, or similar forms of administration in the different parts of the Dominion. Both of these are markedly absent in Canada. A fairly large percentage of the labouring population is not fixed in its habitation, but travels to whatever district offers for the time being hopes of profitable employment. For instance we have the migration of harvesters from British Columbia and eastern Canada to the west where the work is carried out by labourers over a period of six to twelve weeks, after which the migrants return to their own homes.

Finally, there is the lack of uniformity in the legislation in the different provinces. There is not, and as far as one can see there is not likely to be, any similarity of regulations as it affects the various areas which compose the Dominion. If a man has acquired a status, and a province an obligation by the fact that during a period of work the former has parted with a sum of money which is to be used for insuring him against disabilities, it is unreasonable that he should be penalized by moving to another province, though still living in the same country and under the same flag. Yet, that is exactly what would happen to him. To judge by the number of traffic laws, our legislators would appear to be cognizant of the fact that the world has taken to wheels, but they appear to be unaware of the fact that wheels which are functioning tend to reduce both time and space.

I think we all agree that it is reasonable that the man who is given medical assistance and relief to carry him over a period of illness should subscribe to it during the period when he is able to work.

Voluntary System in Denmark

We then have to ask ourselves should the plan be put into practice as a voluntary or a compulsory system. Many countries have tried the voluntary system and failed. One alone, Denmark, has succeeded. It is difficult for us living in the West to appreciate the density of the agricultural population, and equally difficult to estimate the wonderful spirit of co-operation found there. Denmark is surrounded by thickly populated countries highly industrialized, where she finds a ready market for her produce; some years ago she was able to overcome her chief competitor Ireland in supplying eggs and butter to the English market. Denmark has something like 60 per cent of her population of three and a half millions insured against illness by the voluntary system, but Manitoba has no reason to suppose that she can follow this example.

Compulsory Insurance

Let us now consider the compulsory system, first, as applied to the employee; and second, as it concerns the individual, be he farmer, watch-maker, small store-keeper, etc., who earns a small livelihood, while maintaining his independence. The latter may be just as much in need of medical assistance and subsistence during illness as the employee. How are you going to collect from him? You certainly cannot do it through the mails. If he pays no attention to the notices that you send him weekly are you going to put a lien or mortgage on his property, or will you hale him into court? The courts would soon be clogged by the numbers appearing for judgment. Are you going to employ collectors or inspectors travelling over the immense distances which comprise the province of Manitoba? The cost of collection would probably be 50 to 75 per cent of the money turned in, and no system of insurance could stand an overhead like that. In England, highly industrialized and thickly populated as it is, where only employees are accepted, and where those employees are frequently to be

found to the number of thousands in one establishment, the cost of collection and administration is 12½ per cent. How much more would it be for us with our population which is mainly agricultural and certainly widespread? To set up a system which would only include Winnipeg and other cities, and would be limited to employees is to approach the fringe of a difficult problem, and leave the main body untouched.

Summed up as between a system of health insurance entirely supplied by the state, or one mainly provided by employer and employee and subsidized against emergencies by the state, the latter is the better. As between the compulsory and the voluntary, the advantage lies with the latter. In each case it does not appear to be possible to devise a collecting machine which will be efficient, moderate in cost, and able to overcome the physical difficulties found in the province of Manitoba.

State Subsidies to Doctors

In leaving this angle of the question it seems appropriate to refer to the means which other countries have taken to solve somewhat similar difficulties, difficulties which are entirely due to physical causes. Three may be mentioned, the Highlands and Islands of Scotland; certain communities in the mountainous cantons of Switzerland, and South Africa. The National Health Insurance Act of Great Britain is operative legally over the whole of Scotland; but it is found that in certain sparsely populated districts where the inhabitants are poor, and not engaged in any steady industry, it would not be feasible to collect the weekly dues, and even if it were, no doctor could afford to work for the income provided, more especially when long distances and difficulties of transportation are taken into account. Therefore, the State induces doctors to settle in these areas by means of subsidies. The scale of fees to be charged by the doctor takes into consideration the poverty of the patient, but does not allow for the distance to be travelled. That is, the fee is based on the supposition that the doctor lives near to his patient. The State adds to the fees received a sufficient sum to bring the income to $2,500 per annum. Travelling allowance and house are also provided.

In some of the higher altitudes in Switzerland there are communities which are shut off from other towns to such an extent that they would be unable, on account of snow, etc., to procure a doctor at certain times of the year, and unable to pay him for the time and distance covered. In such cases, younger doctors are induced to abide for a time which is usually limited by the necessity of providing better education for growing children. The doctor is paid partly by a tax assessed on every member of the community, and partly by a state subsidy. In the thinly populated districts of South Africa, instead of a direct subsidy the doctor's income from patients is increased by giving him official or state appointments such as health officer, sanitary inspector, coroner, etc., but the inducements to remain are not as a rule very great.

Abuses of Sick Benefits

There are two difficulties which have developed in the working of the Acts to which I must draw your attention, for they may do a great deal to militate against the success of it. I will state a provisional case. A farmer develops an attack of bronchitis in December; the doctor sees him and satisfies himself that he has the disease, advises him to stay indoors, and gives him some cough medicine. At the end of the week the doctor is asked to send some more medicine, and the attack may easily be made to last six or eight weeks. It would come to an end promptly if the patient found some profitable occupation. Seeing, however, that he has no work to do, that he might as well be drawing sick pay, and that he always has a bit of winter cough, you can see his point of view. You cannot say that it is fraudulent, but you can appreciate how much it will add to the cost. The same condition may arise in any case where there is seasonal unemployment, or where owing to economic conditions a large number are out of work. The man who loafs at home with nothing to do and no prospect of getting work develops digestive troubles and various neuroses, which he considers entitle him to sick benefits. It is just this state of affairs which has caused a tremendous increase, about 100 per cent during the last ten years, in the number of people who are receiving medical services and sick benefits in England. It is a condition for which we have to be prepared if we undertake a provincial health insurance scheme, similar to those in Europe. In my public ward service in the General Hospital there are numbers of adult men who on one plea or another endeavour to remain as bed patients during the worst months of the winter, but suddenly get rid of all their complaints as soon as milder weather brings a promise of employment.

Then there is the bottle habit, which also shows an alarming increase, and the custom of visiting the doctor for the weekly certificate and another bottle, adds heavily to the cost.

There seem to be two reasons for this. A bottle of medicine in the kitchen or bedroom is an outward and visible proof of an illness, which might otherwise be questioned. Secondly, there is the feeling that one is getting something tangible in return for the money that has been paid. Some countries try to discourage the habit by requiring the patient to pay a definite percentage of the value of all medicines, etc., supplied to him.

Farm and Town Conditions Contrasted

It would add to the success of any method of State Health Insurance which might be introduced that it should be applicable to the whole province, in other words, that it should fit both the industrial worker and the farmer. Such a project would at once introduce a difficulty which at present seems insuperable. The industrial worker's outlook is based on a pay day which occurs every week or every fortnight. He bases his budget on an expenditure which has to be met and settled at regular intervals. His grocer, his butcher, etc., sell him goods on the understanding that he will not require credit for longer than two weeks. He frequently buys his winter supply of fuel by payments which are spread over the whole year. If he indulges in something expensive, or a luxury such as a car, a gramophone, etc., he takes possession on condition that he will make regular monthly payments. His pay is therefore definitely assigned in advance for either necessities or luxuries, with little or no leeway for any misfortune. To such a man, sickness of more than ten days' duration is a disaster. His credit, which was good as long as he was working, at once ceases. He may lose possession of his car, etc., but of much more importance he and his family are lacking in the necessities of life. To this man, sick benefits must be combined with medical services.

As opposed to this there is the farmer who might be said to have one big pay-day per annum. There will of course be smaller sums from time to time when he sells milk, eggs and butter, stock, etc., from the farm. He is supposed to clear up his obligations every fall, lay in whatever will be necessary during the winter, and arrange for his credit during the year. For this man sickness does not mean ejection for non-payment of his rent; he has probably food and fodder sufficient for his family and stock for some time; in many districts, he will have a good supply of fuel laid in for little more than the labour of getting it. The renewal of his clothing may have to be postponed. This man, when ill, is not nearly as much in need of sick benefits as the industrial worker in the city. Another point which I had forgotten is that the members of a farming community are more neighbourly and more helpful to each other than are the shifting members of a city block. I do not say that sick benefits to the farmer would not be convenient, and helpful, but he has not the same urgent need for regular payments as has the industrial worker.

Some Difficulties in State Medical Service

Having discussed the question from the point of view of the sick man we must now turn to the outlook of the doctor, the druggist and the hospital. I am supposing that competent actuaries would deal with the amount of sickness that would ordinarily arise in the province, and that from this the amount of money necessary to provide the various services would be found. The hospital would certainly have to be reimbursed in case of a deficit, since no hospital could be allowed to close its doors for lack of funds. Doctors could be expected to undertake treatment on a whole time, or part time, basis, or on something like the panel system in England. The whole-time doctor, appointed by the State, drawing a fixed salary, entitled to a pension, as a civil servant subject only to dismissal for gross causes, while a success in institutions, is looked at askance by the civil community to whose houses he may be summoned for sickness. The liberty of personal choice has been removed; there seems to be to the patient a lack of sympathy in their misfortunes, and a lack of understanding of their difficulties. In place of a family friend and physician, they find a policeman who quarantines them for infectious disease, and an autocrat who announces that the sickness is over and that no more visits will be paid and no more benefits received. Requests for medical services at inconvenient times, or where no real illness exists leave a feeling of irritation on both sides which is not beneficial to the smooth working of the plan. A physician, especially one who has been in practice for himself, rather resents the interference of the State. There are unnecessary forms and reports to be made out; medical inspectors visit him from time to time, causing annoyance, and a disgruntled patient may put him to a great deal of inconvenience by sending a report to headquarters bureau. As against that the security of tenure and salary, and the certainty of a pension, with a reasonable annual holiday do much to modify the various drawbacks. I do not think that this applies to the municipal doctor, but I shall deal with that later. The part-time doctor is little more

than a makeshift. He is guaranteed certain gifts within the power of the State, accompanied by a certain salary, and he is expected to make the balance of his livelihood from the private patients whom he treats. This is not always satisfactory, because the income from private practice frequently turns out to be less than the estimate made by the State. In return for certain benefits the State requires him to look after poor people who cannot afford a fee; there is occasionally disagreement over the border line cases. It is characteristic of this type of appointment that it always appears to be more attractive at the time of application than it subsequently turns out to be. From the point of view of the doctor, this type of appointment has many drawbacks. He is not a civil servant. There is no security of tenure; he feels that if he works hard and makes a success of it, his subsidy may be reduced. Such practices are usually to be found in isolated districts where the amenities of social life are few, and the outlook for a wife and growing family disheartening.

The English System

National Health Insurance in England with its panel system is only suited to industrial areas or thickly populated rural areas. I may devote a few words to it. In a certain locality, there are let us say, fifty doctors. Thirty-five of them announce that they are willing to take patients under the panel system. That means that the names of these doctors are put on a list, board, or panel. Let us suppose that there are in this area 50,000 people who come under this system by right of the fact that deductions are made from their wages for medical services and sick benefits. Everyone of this 50,000 must sign up with one of the thirty-five doctors, provided the latter are willing to take them. There are certain conditions. No doctor can have more than, I think, 2,000 names on his list. There will be some patients whom nobody wants, but as the doctors have to give medical service to all the insured, these are usually divided amongst them. The doctors in most cases are paid on a per capita basis, and not on work done. Patients are allowed the privilege of changing their doctor, but with certain restrictions. The State lays down what service is to be given which consists mainly of such attendance as can be provided by a general practitioner. He would not be required to do major operations, or to attempt the duties of an eye and ear specialist, etc. There are several advantages. First, and most important, there is free choice on the part of patient and doctor. If a doctor is open to taking panel patients, then he probably wishes to get as big a list as possible; therefore there will always be the stimulus of doing his best work, in order that he may acquire a reputation which will induce patients to leave another doctor and come on his list. Finally, it is to the doctor's benefit to use every endeavour to prevent illness, seeing that his pay per head per annum is fixed, and that it is less trouble to look after a well than a sick man. There are of course complaints. The patients want the service of specialists when their illness is such as to require expert assistance. The doctors feel that the bureaucratic hand of the State is too much in evidence. Too many reports to be made; too many records to be filled; too much disciplinary action in case of large drug bills. On the whole, the system appears to work fairly well, and gives satisfaction to a large proportion of fifteen or sixteen million people.

I mentioned in an earlier part of the report the fact that unemployment tended to increase the cost considerably. I should also have mentioned that the rural practitioner is allowed mileage. Even with this, as I pointed out, there are certain areas so sparsely populated that the panel system would not work.

Conclusions

There emerge then the two great drawbacks to the panel system of health insurance as applied to Manitoba; the impossibility of collecting the regular dues from the people who are not in steady employment under a corporation or owner; and the impossibility of giving satisfactory service over large areas, where the population is too small to support a doctor by its contribution.

There has been tried out of recent years a new method, namely, the municipal doctor, which seems able to adjust itself satisfactorily to conditions in the country. It is not necessary for me to go into details. Roughly, it consists in the payment of a doctor for all services by means of a land tax. The spirit of co-operation which is so necessary for all these plans, is further evident in the project by which municipalities are combining to maintain a hospital, and pay a competent surgeon and staff.

A provincial contributory system of health insurance does not appear to be feasible at present in Manitoba; it might be applied to the cities; it would be too expensive for the average country district; and the unorganized territories, far from contributing for medical service, will probably have to be helped out for some time by means of a state subsidy.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Safety Work at Flin Flon Mine

The safety activities at the Flin Flon mine of the Hudson Bay Mining and Smelting Company in Northern Manitoba were reviewed by Mr. W. B. Patton, safety engineer of the plant, in a recent issue of the *Canadian Mining Journal*.

At the outset, Mr. Patton declares that "in most modern industrial organizations only about 15 to 20 per cent of the accidents that occur can be directly attributed to faulty plant or unguarded machinery." At Flin Flon the percentage was even lower, and during the past four months the percentage of accidents directly due to mechanical deficiency was only eight. This low percentage is stated to be "partly due to the benefits derived from the experiences of other companies and partly due to the fool-proof nature of a modern mining and engineering plant." Yet in spite of this almost "fool-proof" plant, the accident percentage, particularly of fatal accidents, remained comparatively high at Flin Flon. Then, the management "who are enthusiastic safety first men realized that something must be done, and they did it."

Early in the campaign (during the construction period) it was realized that with a large percentage of central European labour employed, "no fixed set of rules could be devised to cope with such a human conglomeration." Accordingly, the first steps were to stop all danger channels by permanent warning signs, and all possible hazards and danger zones were safeguarded by placards. Safety slogans and warnings were posted in different languages, and these were supplemented by verbal messages and safety advice given to workmen by officials. "If a workman was caught performing an unsafe action, he was given a lecture and shown the safe method. If he continued in the old rut, he was let out as being careless and therefore undesirable, and his lay-off was a lesson to others."

In connection with mining operations, a series of safety talks was prepared by the safety engineer who outlined every phase of this dangerous calling, the first subject being explosives. Some features of the campaign may be gleaned from the following paragraphs:

Workmen are given the opportunity of submitting suggestions and ideas concerning safety and economy by means of suggestion boxes placed in conspicuous locations. Underground shift bosses are encouraged by prizes for a "no-accident" month, this plan being extended to other departments as they go into operation.

A monthly report is issued by the safety engineer on the accidents for the previous month. In this report, a copy of which is given to the superintendent of each department, percentages are tabulated on a *pro rata* basis for each department and the overall percentages given.

The success of the safety effort may be judged from the following overall percentages: March, 4·37 per cent; April, 3·00 per cent; May, 2·25 per cent; June, 1·83 per cent; July, 1·98 per cent; August, 1·73 per cent. These percentages are calculated from accidents which have caused over 3 days' loss of work, and probably around 50 per cent of them have caused less than 8 days' absence. During the period from April to the end of August there has been one fatality and only three accidents of consequence.

The safety engineer manages the company's compensation business and investigates each claim with a view to preventing accident repetition.

As each department is going into operation, an open letter—particularly directed to the workmen of that department—is put on the bulletin board with a view to urging the men to maintain the perfect safety conditions with which the plant is starting off.

The chief safety measures and apparatus are outlined as follows:

A perfectly trained fire-brigade under a competent fire chief. In addition, all the principal buildings are equipped with the "sprinkler" system and every bunk house, etc., is stocked with hand extinguishers, while a high pressure pipe line extends over the works and townsite with hydrants placed at strategic points.

A capable first aid team, certificated and recognized by the St. John Ambulance Association, with a large preparatory class are also taking up this work.

Two fully equipped rescue teams are being trained for the mine while a fully equipped rescue station is in close proximity.

Practically little timber is used underground, and it is made compulsory for all rubbish, paper, empty powder boxes, etc., to be removed daily from the mine. Careless handling of explosives is further reduced by the introduction of special paper bags to transport powder underground. The magazine for the mine is located about a mile from the main shaft. It is a circular brick building, and is electrically heated.

Where it is deemed practical and necessary, miners underground, scalers in the open pit and attendants at the gyratory crusher, etc.,

are compelled to wear safety belts. Every underground worker must wear "hard boiled" hats while at work; grinders, chippers, welders, etc., are compelled to wear goggles, and suitable masks are worn by acid sprayers, lead burners, cyanide pumpmen and crusher attendants.

A modern hospital, with two qualified doctors, two qualified nurses, operating theatre, X-ray apparatus, and autopsy room, is in close proximity to the plant.

Occupational Mortality in United States

The United States Public Health Service has published a pamphlet summarizing the results of a recent investigation into occupational mortality in the United States which was carried out jointly by the Actuarial Society of America and the Association of Life Insurance Medical Directors. It is pointed out that the data used in this study have a valuable advantage over official mortality data by occupation in that the information as to the number exposed to risk and the number of deaths is based on the same source, namely, the individual insurance policy. The fundamental weakness of official occupational mortality data, it is pointed out, lies in the fact that the information as to the population depends on the occupational census and the information as to the deaths on the death certificates (with the doctor's statement as to occupation). In life-insurance data the deaths are checked off against the original policies. We know that, at the time of issuance of the policy, the man was employed in the occupation to which his death is actually assigned.

Two important tables are given in the summary, the first showing the death rates for occupational accidents, by specific occupation; the second showing the death rates by all causes except accidents, adjusted for age and the number of years the policy had been in force.

The accident table shows that there is a large group of occupations that are subject to a severe accident hazard. The hazard is most marked among linemen and cable splicers in electric and power plants, oil and gas field rig builders and handlers of explosives, skilled coal miners (underground), and iron-mine operatives (underground). But it is also found that there is a large number of occupations where the occupational accidents must form an important part of the total mortality in the group.

In the other mortality table, from which accidents are excluded, high rates are found for unskilled and not specified operatives in coal mines (underground), keepers of hotels, semi-skilled operatives in iron and steel works; and on the other hand, low rates were found for builders and contractors, electricians, and farmers. But a close inspection of the table indicates many inconsistencies, such as a high mortality level for undertakers and policemen, and a low mortality level for delivery men (auto), semi-skilled fur workers, etc. "The data," it is stated, "do not appear to be capable of further analysis in regard to mortality. The failure to obtain any clear-cut distinctions in different economic or social levels may be due to an extent to the factor of selection present in all life-insurance data."

Some comments on the incidence of particular diseases are as follows:—

Tuberculosis is three times as heavy at each age group among unskilled labourers as it is among the upper and middle classes of society. This consideration may explain the presence of high tuberculosis rates among farm labourers, general labourers, hucksters, and freight elevator tenders. Dust is an important factor in connection with tuberculosis. Examples of dust hazard are found among miners of copper, gold, or silver, stonecutters, workers in sawmills, chippers of metal and other skilled metal workers, moulders in brass and bronze, carders and combers of cotton, and upholsterers. It has been suggested that alcoholism may have an influence on the tuberculosis rate, and this report shows a high mortality from tuberculosis among hotel keepers, waiters, and cooks in hotels, restaurants, and clubs, indicating that the suggestion has some foundation. The mortality from this cause was low among farmers and druggists.

Pneumonia appears of importance in 17 classes, the principal factor in which is exposure to abnormal temperatures. Thus, there are included seven underground mining classes, as well as rollers, roll hands, and labourers in steel mills. Inclement weather conditions may lead to high death rates from this cause among chauffeurs, and alcoholism among actors and saloon keepers. Social class seems to have little importance in regard to pneumonia.

Bright's disease or chronic nephritis was significant in 10 classes, and cerebral hemorrhage or apoplexy in 5 classes. It may be mentioned that four of the latter are in the same occupations as the former, namely, the group of underground coal miners, buyers and shippers of livestock, guards, watchmen, doorkeepers, and hotel-keepers. Bright's disease was also important among section foremen, locomotive engineers, motormen, proprietors driving their own express wagons, and police-

men. Heart disease—which some investigators have found to be correlated with both Bright's disease and cerebral hemorrhage—appears as a significant cause in eight occupations of this investigation, and five of these have already been mentioned in reference to these two other causes of death.

Cancer as a cause of death has given rise to much speculation in recent years. The 10 employments showing a high death rate from cancer in the present research are railroad section foremen, janitors, junk and rag dealers, blacksmiths, workers in non-alcoholic beverages, hotel keepers, freight elevator tenders, tailors and semi-skilled clothing workers and guards, watchmen and doorkeepers. Those last mentioned have had in many cases some other principal occupation before becoming guards, watchmen, and doorkeepers as a method of partial retirement from active service.

Appendicitis was prominent in the following classes: Farmers, mine officials, mine foremen underground, druggists, and policemen. In the case of farmers and those attached to mines, the difficulty of obtaining adequate medical and surgical attention for this acute disease has been suggested as a reason for the high death rate from appendicitis.

Cirrhosis of the liver was significantly high among bartenders and saloon keepers, and also among the large group of underground coal miners. It showed a low rate among farmers. This cause is well known to be closely related to alcoholism.

Accidents in Building Trades in New York in 1929

The Building Trades Employers' Association of New York, recently published a study of the accident records of the building industry in 1929. It is pointed out that accident frequency rate is the number of lost-time accidents per one million man-hours worked, and accident severity rate is the number of days lost per one thousand man-hours worked.

1. Two hundred and ninety-eight firms, with 18,838 employees, worked 39,962,397 man-hours.

2. The frequency rate is 42.36, which compares favourably with last year's rate of 49.67, being a drop of 15 per cent.

3. The severity rate is 3.49, which compares favourably with last year's rate of 5.74, being a drop of 40 per cent.

4. One hundred and nineteen firms in 22 different groups, with 2,336 employees working 4,720,217 man-hours, completed the year without a lost-time accident.

5. One hundred and fifty-six firms in 16 different groups, with 26,006 employees working 53,119,133 man-hours, reported for the years 1928 and 1929 with a combined frequency rate of 50.65 and a severity rate of 5.60.

6. The frequency rate for 1929 was 49.71 as against 51.56 for 1928, being a drop of 4 per cent.

7. The severity rate for 1929 was 4.78 as against 6.38 for 1928, being a drop of 25 per cent.

8. Thirty-three firms, with 1,205 employees working 2,337,819 man-hours, completed both years without a lost-time accident.

Importance of Regular Inspection

The Director of the Division of Industrial Safety of the Massachusetts Department of Labour and Industries, in his annual report for 1929, outlines the inspection work of his division as follows:—Enforcement of labour laws rests upon the principal of regular inspection of industrial establishments. Through this means the protection afforded by statute for employees in the industrial establishments of the commonwealth is made possible. Compliance is secured with laws and regulations for the safeguarding of dangerous machinery. Suitable lighting is furnished in work places. The exposure of employees to the danger of inhaling irritant dust and fumes is prevented. Sanitary requirements are enforced. These include rules and regulations for suitable toilet and washing facilities, adequate ventilation of industrial establishments, maintaining proper temperature in weaving and spinning departments of textile mills, providing pure drinking water and enforcing the statutes restricting the employment of women and children, and the laws enacted for their protection.

Within the scope of this inspection work building operations are included and regulations enforced to maintain safe scaffolding and working platforms for employees in these hazardous trades. Requiring compliance with the statutes in relation to employment in the construction of work, including provisions for citizens' preference, the eight-hour day and the customary and prevailing rate of wages for mechanics and teamsters, are prominent features in this work.

Lighting in Factories and Workshops

The British Home Office has published a third edition of a pamphlet on "Lighting in Factories and Workshops," showing the importance of suitable illumination in regard to the health, safety and efficiency of the worker

and its effects on the general efficiency of the work. The various ways in which the lighting of a factory may be defective are indicated in the following series of questions:—

Adequacy.—(*a*) Is the lighting adequate for affording safe access from one part of the factory to another? Does the minimum illumination reach the standard recommended by the Committee on Factory Lighting? Are all dangerous parts of the machinery or plant adequately lighted? Are the walls and ceilings kept light in colour?

(*b*) Is the lighting adequate for carrying on the work? Do the workers sit or stand naturally or is there a tendency to "peer" into the work? Do they complain of eyestrain or headache? Is there much spoilt work? Where materials of different colours are used, is provision made for the proper illumination of the darkest of these? Is it desirable that the height of light sources should be adjustable? Are the windows cleaned periodically and kept un-obstructed on the inside? If the windows are overshadowed by near buildings, is it possible to whitewash the obstructing surface or to provide reflectors for vertical light? Are the light sources in good condition and kept clean? Is the system of lighting up-to-date?

Suitability.—(*a*) Is the lighting constant and uniform? Do the light sources flicker? Is the whole of the area made use of by the workers sufficiently lighted?

(*b*) Is glare present? Does any near source of light shine directly into the worker's eyes? Are the sources shaded, and if so is the shade sufficiently deep? Should the sources be slightly raised? If highly polished material is used, is adequate provision made for the prevention of "regular" reflection or "glare" by adjusting the source or by suitable shading?

(*c*) Are all troublesome shadows absent? Are the light sources properly placed to prevent the shadow of any worker or any part of the plant from falling on the material worked on? Would the provision of a few additional sources tend to eliminate shadow? Is any part of the plant (e.g., a travelling crane) liable to move under a light source, so that its shadow is cast on the work or floor?

Industrial Health Research in England

The tenth annual report of the Industrial Health Research Board of Great Britain (formerly the Industrial Fatigue Research Board) reviews the work of this body during the calendar year ended December 31, 1929. The functions and purpose of the Board are described as follows: "To suggest problems for investigation, and to advise upon or carry out schemes of research referred to them from time to time by the Medical Research Council, undertaken to promote better knowledge of the relations of hours of labour and of other conditions of employment, including method of work, to functions of the human body, having regard both to the preservation of health among the workers and to industrial efficiency; and to take steps to secure the co-operation of industries in the fullest practical application of the results of this research work to the needs of industry."

On the above basis, the investigation and research activity of the Board during the year was conducted along three main channels. (1) The first section dealt with particular problems of wide industrial importance, and were as follows: physiology of heating and ventilation; vision and lighting; noise and vibration; accident causation; absenteeism due to sickness; sickness records; incidence of nervousness; physique of men; labour turnover; repetitive work; effects of posture; occupational fitness of mental defectives; occupation analysis. (2) The second group consisted of specific problems submitted by government departments and industrial associations and included such investigations as: sickness among printers; sickness among cardroom operatives; sickness incidence in the pottery industry; causes of absenteeism among coal miners; effect of pit-head baths; vocational selection for government departments. (3) The third division comprised such laboratory researches as: transfer of acquired skill; relative effects of concentrated and distributed practice; effects of noise and vibration; characteristics of learning curves; effects of variety and uniformity of work; effects of incentives.

In a concluding summary, it is pointed out that a great deal of the work has been of a preparatory nature, and that some of the investigations have not yet emerged from the experimental stage while others have not yet reached a point at which definite conclusions can be formulated. "In one direction definite conclusions have been reached as to the value of scientifically designed and well-adjusted lighting and work in this direction is still proceeding. In other directions definite conclusions have been reached offering well ascertained benefits to operatives and of sufficiently general application to industry to merit widespread adoption. In this category may be included—in the case of work demanding the discrimination of fine detail—the practical value to workers generally (whether of normal or abnormal vision) of fine spectacles. It has been conclusively estab-

lished that short rest-pauses, introduced into the usual spells in the case of repetitive work are beneficial to the operative and tend to increase output. The limits beyond which temperature and humidity in factories and mines tend to have an injurious effect upon health, and directly or indirectly on output, have been studied, and definite conclusions reached, and important work has been done which tends to establish the existence of definite seasonal variations in the output of men engaged on heavy muscular work. These conclusions involve no revolutionary change in factory routine, and in some cases do little more than place upon a scientific and statistical basis empirical practices adopted by individual workers or by enlightened firms, as the outcome of careful observations. Their value is demonstrated by the fact that they have already been adopted in certain branches of industry, and their utility would be greatly increased by more widespread acceptance."

COAL STATISTICS OF CANADA FOR 1929

COAL production in Canada during 1929 was slightly lower than in the preceding year, but was nearly 12 per cent higher than the average for the past five years, according to a recent bulletin compiled by the Dominion Bureau of Statistics.

Production during 1929 was 17,496,557 short tons, or 0·4 per cent less than the 1928 total; imports totalled 18,619,300 tons; exports reached 842,972 tons. An apparent consumption during the year of 35,272,885 tons is thus indicated as compared with 34,414,648 tons in 1928. The provinces of Nova Scotia, New Brunswick and Saskatchewan all reported increases in output. Alberta's production dropped 2·5 per cent in the year, while the decrease in British Columbia was 11·2 per cent, due largely to the extensive use of fuel oil and by the development of hydro-electric energy in that province. Contributing factors to the general decrease in production of 5,076,019 tons were lack of orders, mine disability, car shortage, absenteeism, etc. It is also estimated that labour disputes at the coal mines in 1929, involving 3,045 men with a consequent loss in working time of 15,805 man days, were the cause of a further loss of 38,880 tons.

Nova Scotia, New Brunswick, British Columbia and the Yukon produce only bituminous coal; Saskatchewan mines yield lignite only; Alberta produces bituminous, subbituminous and lignite. Some anthracite was formerly mined in Alberta, but the only such mine has been closed since 1923.

Railroads in Canada consumed 5·2 million tons of Canadian coal in 1929. This tonnage represented 32·9 per cent of the total shipments from the mines. Quebec provided the largest market for Canadian coal during 1929. Exclusive of coal for the use of the railroads, 2,372,541 tons of Canadian coal were shipped to Quebec points.

The report states that the Federal Government assistance to test movements of Canadian coal to consuming points within the Dominion, which was authorized by legislation in 1928, was continued during 1929, and that "this assistance provided a wider range of distribution for Canadian coal in the central provinces than at any previous time."

The following paragraphs from the report summarize the salient features of coal statistics for Canada:

Coal cleared through Nova Scotia and British Columbia ports accounted for 96 per cent of the Canadian exports. The United States and Newfoundland provided the principal markets for Canada's external shipment of coal.

Receipts from Great Britain consisted of 729,458 tons of anthracite and 115,368 tons of bituminous, making a total of 844,826 tons, an increase of 25·98 per cent over the 1928 imports of 670,612 tons. The principal supply of coal imported into Canada came from the United States, this tonnage was made up of 14,469,831 tons of bituminous, 3,173,043 tons of anthracite and 14,108 tons of lignite.

Shipments of anthracite coal from Russia to Canadian points commenced in December, 1928, and during the calendar year 1929, the tonnage received assumed important proportions amounting to 117,304 tons. Small quantities of coal were also received from Newfoundland and Japan.

The coal mining industry furnished employment to 29,739 employees during 1929. In eastern Canada steady employment was afforded the 13,929 men working in or about the coal mines; in western Canada the usual summer seasonal decline was apparent. Salaries and wages paid in this industry amounted to $42,376,378 as against $43,320,811 in 1928. There were 28,227 wage-earners working in the coal mines of Canada in 1929;

of these 6,323 worked on the surface and 21,904 underground. An average of 275 days' work was furnished surface men while underground men worked 246 days.

Records for the industry show 7,117,692 man-days work done during the year and from this total it has been computed that the average daily earning power per man was $5.49. Calculated on the same basis, the average in 1928 was $5.57 and in 1927 it was $5.03.

Capital employed by the companies operating in the coal mining industry in Canada in 1929 was $141,766,727. The value of fuel used in the operation of Canadian coal mines in 1929 was $3,087,105 and consisted principally of bituminous, sub-bituminous and lignite coal, although small quantities of gasoline, kerosene and wood were also used. Electricity purchased amounted to 40,326,458 k.w.h. valued at $570,250, in addition to which 108,944,704 k.w.h. were generated by the operating companies for their own use. A further quantity of 6,554,222 k.w.h. was produced and sold for use apart from coal mining operations.

Canadian domestic and industrial consumers used large quantities of coke, manufactured and natural gas, fuel oil and electricity, in addition to the 35·27 million tons of coal consumed in 1929. Coke manufactured in 1929 amounted to 2,712,337 tons; sales totalled 1,183,762 tons; exports were 25,208 tons, while imports of coke were recorded at 1,226,853 tons. Coke made available for consumption during the year was 3,913,982 tons. The coal equivalent of the coke imported for consumption was 1,887,464 tons. Canadian coal used at the collieries for the manufacture of coke amounted to 115,482 tons in 1929.

Manufactured gas is used extensively for household purposes and in 1929 the sales of gas in Canada totalled 17,638,942 thousand cubic feet.

Natural gas consumed for domestic purposes amounted to approximately 16,000,000 thousand cubic feet; industrial users utilized 12,000,000 thousand cubic feet. It is calculated that the domestic consumption was sufficient to displace 640,000 tons of coal.

The Canadian consumption of fuel oil for industrial and domestic purposes continues to increase. In 1929 the total quantity of fuel oil available for consumption in Canada was 514,567,878 gallons as compared with 435,327,021 gallons in the preceding year. The Dominion Fuel Board survey of domestic fuel consumption in 1928 showed a total distribution of 34,263,000 gallons of fuel oil for domestic heating in the Canadian acute fuel area, Ontario and Quebec. This quantity indicates a possible coal displacement of 273,000 tons.

Employment on Railways in the United States

The Bureau of Railway Economics, Washington, D.C., has recently published a statistical summary of railways in the United States designated as Class 1, namely, carriers with annual operating revenues above one million dollars. These Class 1 railways operate approximately 92 per cent of the total railway mileage of the United States, and earn about 97 per cent of the total revenues. Switching and terminal company statistics are not included. The tabular summaries contain information respecting investment and income account; fixed charges and dividends; employees and their compensation and traffic statistics; traffic averages; equipment in service; locomotive-miles and train-miles; car-miles; distribution of railway operating revenues; taxes (by States); fuel consumed by locomotives; rails and ties laid; freight and passenger operating statistics.

The following table summarizes the information given in the report as to railway employees, their wages, hours, etc.

NUMBER OF RAILWAY EMPLOYEES, WAGES, HOURS, ETC., IN THE UNITED STATES

—	Number of employees	Total hours paid	Average hours per employee	Aggregate wages	Average hourly pay per employee	Average yearly pay per employee
1920	2,022,832	5,446,740,533	2,692·6	$3,681,801,193	$ 0·676	$ 1,820·12

NOTES ON TECHNICAL EDUCATION AND APPRENTICESHIP

Apprentice Training at Hamilton Technical Institute

During the past seven years this school has endeavoured to co-operate with the trades and industries in the training of apprentices. Practically every industry employing apprentices at Hamilton, has co-operated in carrying out the following arrangement. The apprentice attends special apprentice classes held in the school one-half day and one evening per week during the four years of his apprenticeship. The employer is responsible for the attendance, remuneration and discipline of the apprentice, while the school shoulders the responsibility of accommodation and instruction. The courses of study are arranged jointly by the firm and the school. The success of this co-operative policy may be judged from the fact that while in 1923 the attendance of industrial apprentices was less than fifty, largely coming from one firm, this year there is an attendance of over 150 apprentices coming from fifteen of the leading industries of the city.

Five years ago a co-operative plan was arranged between the school and the employers of the building trades, whereby the carpentry and bricklaying apprentices attended classes in related drafting and practical work. The value of this training became so apparent to the employers that the plan was extended to include plastering, plumbing, sheetmetal, electrical installation and painting apprentices. The results attained in this line of education were largely responsible for the passing of the "Ontario Apprenticeship Act" which was modelled on the scheme of apprentice training in this school. All printing apprentices in the city attend Technical School at least four half days per month, and are required to pass a series of examinations before securing journeyman rating.

At present the apprentice enrolment is as follows:—industrial apprentices, 159; building trade apprentices, 120; printing apprentices, 67.

(The foregoing note is based on an article appearing in *Canadian School Journal,* October 1930, over signature of Mr. R. A. Kirkpatrick, President of the Technical Section of the Ontario Educational Association.)

Apprentice Training Classes are Planned

Apprentice training classes will be concentrated in different centres throughout the Province of Ontario, according to a recent statement by Mr. A. W. Crawford, Inspector of Apprenticeship for the province. If the number of apprentices in any particular trade at any centre is not sufficient to justify establishment of local classes, the apprentices affected will be sent to another centre where a better representation has been established. As a result of this arrangement, where necessary, the grant to the latter centre from the Department of Education will be increased and the grant to the former decreased by an equivalent amount. The classes will run for eight weeks commencing in January next, for five days a week and eight hours a day.

Extent of English Cotton Industry

The present condition of the English cotton industry is discussed in the *Harvard Business Review,* January, 1930. It is pointed out that this industry counts some 57,136,000 spindles and 795,000 looms, and is still by far the greatest in the world, having about as many spindles as the three countries following in importance taken together, the United States (35,542,000), Germany (11,153,000) and France (9,770,000).

"Besides the spinning and weaving sections, which are almost entirely mechanical processes, England also has a great finishing industry, which includes dyeing, bleaching, printing and mercerizing. In the cotton industry alone no less than 569,950 persons are employed (Census, 1927), while some hundreds of thousands earn their living in industries directly dependent on it; and indirectly there are many more still who do so. Without exaggeration one may say that some 5,000,000 inhabitants of England are dependent on the cotton industry for their daily bread. This huge industry is located almost entirely within the confines of the county of Lancashire."

The writer, Mr. J. Wisselink, discusses the efforts now being made to bring about concentration in the English cotton industry as one of the most important economic occurrences of the day, and concludes with the statement that "the industries in other countries will therefore do well to reckon seriously with the possibility of the formation in England of a big complete vertical trust with its own selling organization, or some equivalent corporation composed of closely interlocked horizontal groups."

AMERICAN FEDERATION OF LABOR

Summary of Proceedings of the 50th Convention

THE fiftieth annual convention of the American Federation of Labor was called to order in the Statler Hotel in Boston, Mass., on the morning of October 6, by Mr. Harry Jennings, chairman of the local Entertainment Committee, who introduced Mr. Nathan Sidd, president of the Boston Central Labour Union, and who called on Cardinal O'Connell, Archbishop of Boston, to deliver the invocation. Mr. Sidd followed with an addresss on behalf of organized labour of the City of Boston, and presented the president of the federation with a souvenir in the form of a gavel. Mr. James T. Moriarty, president of the Massachusetts State Federation of Labour extended greetings on behalf of the State body. Governor Frank G. Allen welcomed the delegates on behalf of the Commonwealth of Massachusetts, and Mayor James M. Curley acted similarly for the city of Boston. On behalf of the Boston Central Labour Union, Mr. G. Henry Dunderdale presented another gavel to Mr. Wm. Green, president of the federation, who on declaring the convention open for business called for the report of the Credential Committee. This report showed 435 delegates present, divided as follows: 277 represented 93 national and international organizations; 4 departments, 34 state bodies, 79 central labour unions and 36 trade and federal labour unions were represented by one delegate each; five were fraternal delegates, one of whom represented the Trade and Labour Congress of Canada and two the British Trades Union Congress. Mr. Leo F. Greene was appointed assistant secretary, G. Harry Dunderdale, sergeant-at-arms, and Thomas F. Powers, messenger, after which the various committees were named.

President Hoover's Address

Following these proceedings President Hoover and Mrs. Hoover arrived at the convention hall, the latter on introduction to the delegates being presented with a cluster of roses by Mrs. T. A. Rickert (This was the second occasion on which a president of the United States addressed a convention of the American Federation of Labor, the first being in 1917 when President Woodrow Wilson attended the Buffalo meeting). President Hoover spoke as follows:—

In his invitation that I should address you on this occasion President Green spoke in terms of high praise of the benefits to labour from the nation-wide co-operation initiated at the White House last November for mitigation of the effects of the present depression.

At those White House conferences the leaders of business and industry undertook to do their utmost to maintain the rate of wages. They also undertook in case of shortened employment to distribute work as evenly as possible over their regular body of employees. The leaders of labour undertook to urge effort in production and to prevent conflict and dispute. The public officials and the managers of industry and utilities undertook to expand construction work to mitigate unemployment.

We have now had nearly a year in which to observe the working of these arrangements. These, the first undertakings of this character in our history, have been carried out in astonishing degree. There are, of course, exceptions, but in the large sense our great manufacturing companies, the railways, utilities, and business houses have been able to maintain the established wages. Employers have spread their employment systematically. For the first time in more than a century of these recurring depressions we have been practically free of bitter industrial conflict.

The fine co-operation in providing organized emergency employment through Federal, State and municipal public works and utility construction has been an important contribution in taking up the slack of unemployment. The measure of success is easily demonstrated. The Department of Commerce reports to me that public works and the construction work by the railways and utilities in the last eight months amount to about $4,500,000,000, as compared with about $4,000,000,000 in the same period of the boom year of 1929, or an increase of about $500,000,000. In all previous depressions these works decreased, so that the gain is more than even the apparent figures.

We have thus had nation-wide co-operation and team play which have greatly ameliorated the hardship of this depression. These measures have served as a practical system of unemployment insurance. There are some unexpected by-products. Through distribution of employment, large numbers of workers have been saved from being forced into competition for new jobs; the sense of security that the job is theirs by part-time employment has contributed to relieve much of the fear, despondency, and discouragement that come to men and women in search of new jobs in hard times.

I would indeed be remiss if I did not express an appreciation, in which I know you share, to the thousands of men in leadership of business and labour who have served in bringing about these results. In the face of decreasing prices it has required great courage, resolution, and devotion to the interest of their employees and the public on the part of our great manufacturers, our railways, utilities, business houses and public officials.

The leaders of labour have likewise contributed their part. Our freedom from strike and lockout is well evidenced by the statement of the Department of Labour that in the last

depression there were more than 2,000 labour disputes, many of them of major character and accompanied by great public disorder, as compared with less than 300 disputes in this period, and these mostly of minor character. And the great body of labour itself deserves much praise, for never was its individual efficiency higher than to-day.

The undertakings made at that time represent a growing sense of mutual responsibility and a willingness to bend private interests to the general good.

We still have a burden of unemployment. Although it is far less than one-half in proportion to our workers than in either England or Germany, no one can contemplate its effect in hardship and discouragement without new resolves to continued exertion and to further effort in solution of our great economic problem—stability in employment.

Your chairman has spoken of my interest in the development of an American basis of wage. Both the directors of industry and your leaders have made great progress toward a new and common ground in economic conceptions, which, I am confident, has had a profound effect upon our economic progress during the last few years. That is the conception that industry must be constantly renovated by scientific research and invention; that labour welcomes these labour saving devices; that labour gives its full and unrestricted effort to reduce costs by the use of these machines and methods; that the savings from these reduced costs shall be shared between labour, employer, and the consumer. It is a philosophy of mutual interest. It is a practice of co-operation for an advantage that is not only mutual but universal. Labour gains either through increase of wage or decrease or reduction of cost of living or shortened hours. Employers gain through enlarged consumption, and a wider spread distribution of their products, and more stable business. Consumers gain through lower cost of what they buy. Indeed, mass production must be accompanied by mass consumption through increased standards of living.

A conception of this sort does not at once find universal application. We ought not to forget that it is something new in the world's economic life. And there are, of course, those who do not yet believe. It is as far apart as the two poles from the teachings of the economists of 100 years ago, who took it for granted that the well-being of the worker could be purchased only at the expense of the well-being of the employer or some other group in the community, and further that wages could never rise above subsistence or the number of workers would so increase as to pull the weaker back into the cesspool of poverty.

If we survey the Nation broadly we shall find that the diffusion of cost economies between wages, profits, and prices has worked out fairly well. In fact, due to competition and the necessity to average profits over the losses of lean years, industry in the national sense is probably to-day getting the least of the three.

From the acceptance of this basis of industrial relation I believe America is making more progress toward security, better living, and more hours of leisure than those countries which are seeking to continue old conceptions of the wage and to patch up the old system with doles of various kinds which limit the independence of men. Any comparison of the situation of our labour with the labour of those other countries, whether in times of high prosperity or to-day in times of temporary depression, should carry conviction that we are on the right track.

No system is or can be free of difficulties or problems. The rapidity of our inventions and discoveries has intensified many problems in adjusting what we nowadays call technological unemployment. I am co-operating with President Green and representatives of employers' associations in an exhaustive inquiry into its various phases. If we stretch our vision over the last 10 years we shall find much to convince us that the problem is not at all insurmountable in the long run. It is estimated by some of our statisticians that in this period over 2,000,000 workers have been displaced from older industry due to labour-saving devices. Some way, somehow, most of these were re-established in new industry and new services. Nor is there any reason to believe that we can not revolve our economic system in such fashion that further new discoveries and inventions will further increase our standard of living and thereby continue to absorb men who are displaced in the older industries. Nevertheless there is a period of readjustment in each case of new discovery, and industry has need of a larger understanding of the facts.

It is this process of readjustment that partly causes our present difficulties in the bituminous coal industry. In that industry the encroachments of electrical power, of natural gas, of improvements in consumption, have operated to slow down the annual demand from its high peak, leaving a most excessive production capacity. At the same time, the introduction of labour-saving devices has decreased the demand for mine labour. In addition to its other difficulties must be counted the effect of the multitude of 6,000 independent mine owners among 7,000 mines, which has resulted in destructive competition and final breakdown of wages.

All these conditions have culminated in a demoralization of the industry and a depth of human misery in some sections which is wholly out of place in our American system. The situation has been under investigation of our Government departments, by Congress, together with commissions and committees of one sort or another, for the past 10 years. The facts are known. One key to solution seems to me to lie in reduction of this destructive competition. It certainly is not the purpose of our competitive system that it should produce a competition which destroys stability in an industry and reduces to poverty those within it. Its purpose is rather to maintain that degree of competition which induces progress and protects the consumer. If our regulatory laws be at fault they should be revised.

But most of these problems are problems of stability. With the job secure, other questions can be solved with much more assurances. You, as workers, know best of all how much a man gains from security in his job. It is the insurance of his manliness, it upholds the personal valuation of himself and of his family. To establish a system that assures this security is the supreme challenge to our responsibility as representatives of millions of our fellow workers and fellow citizens. The discharge of that responsibility does not allow present difficulties to rob us of our clear vision or the

wholesale faith and courageous aggressive character for which our country has been long the leader of the world.

The demonstration of nation-wide co-operation and team play and the absence of conflict during this depression have increased the stability and wholesomeness of our industrial and social structure. We are justified in feeling that somethink like a new and improved tool has been added to the working kit for the solution of our future problems.

No one would invite either war or business depression, but from them may come some new inspirations. We find in these times courage and sympathy, generous helpfulness from our workpeople to those unfortunates suffering not alone from the present but from fear for their future. We find inspiration in the courage of our employers, the resolution of the Nation that we shall build steadily to prevent and mitigate the destructiveness of these great business storms. It is this inspiration which gives confidence for the future, and confirms our belief in fundamental human righteousness and the value of our American conception of mutuality of interest in our daily work.

Report of Executive Council

The report of the executive council covered 94 pages and dealt with the activities of the federation during the past fiscal year. A synopsis of the report as read by First Vice-president Frank Duffy dealt with the following subjects:—Unemployment; White House conferences; labour's unemployment program; union progress; jurisdictional problems; changes in names of organizations; organization work; older workers; service and educational work; national legislation; anti-injunction legislation; convict labour; non-partisan political campaign; modification of the Volstead Act; old age pensions; railroad consolidation; and Porto Rico. The various sections of the report were referred to the appropriate committees for consideration and report.

Report of the Secretary

The report of the secretary, Mr. Frank Morrison, showed receipts, including the balance from the previous year, of $895,154.31; expenditure amounted to $531,442.93, leaving a balance on hand at the close of the fiscal year, August 31, 1930, of $363,721.38, of which $61,474.58 is in the general fund and $302,246.80 in the defence fund.

The membership represented by the federation consists of 29,226 local unions comprised in 104 national and international organizations with a membership of 2,942,946, and 348 directly affiliated local unions with a combined membership of 18,150, the total paid-up membership being 2,961,096. The report of the treasurer showed how the funds of the federation were invested. The report of the trustees of the A.F. of L. building, with the balance from the previous year, showed receipts of $79,355.40, and expenses of $24,284.82, leaving a balance on August 31, 1930, of $55,070.58.

The financial statement was referred to the Auditing Committee, which later reported having found all books and records correct. This report was adopted.

Committee on Organization

The Committee on Organization, to which was referred several sections of the report of the executive council as well as a number of resolutions, reported that in accordance with the instructions of the Toronto convention plans had been made to more thoroughly organize the south; that national and international unions not only contributed financially to the plan, but had assigned organizers and speakers to assist in the work; that headquarters for the plan had been established in Birmingham, Alabama, under supervision of a representative of the A.F. of L.; that President Green took an active part in the campaign, and that much had been accomplished. The committee also stated that as a result of the campaign 112 local unions had been organized in different crafts in different states, that five central labour unions had been formed, that city central bodies and state federations of labour have been revived and are now actively engaged in the organizing campaign. The committee approved of what had been accomplished and urged the executive council to continue the campaign, if possible with increased forces and resources during the next year. This recommendation was adopted.

The committee concurred in resolutions (1) That the executive council give assistance to the International Ladies' Garment Workers' Union in its organizing campaigns; (2) Urging support of organizing campaign of Bookkeepers, Stenographers and Accountants' Union of New York; (3) In favour of continuing the southern organizing campaign; (4) Appeal for support of textile workers on strike at Danville, Va., in which the executive council was authorized to issue an appeal to all affiliated organizations for financial aid. The committee approved of a resolution aiming to encourage the equalization of labour standards throughout New England, and recommended referring to the executive council a resolution asking assistance for the sleeping car porters' unions, the members of which seek recognition from their employers, a living wage and reduced hours of labour, with a view to "relieving them of the necessity of depending upon tips for a living." The committee concurred in a request for endorse-

ment of the efforts of the American Federation of Teachers to organize the school teachers of the United States, and closed its report, the whole of which was adopted, by urging all organizations affiliated to the American Federation of Labour to plan immediately for the organizing of the working men and women of America.

Union Labels

To the Committee on Labels only one resolution was referred, and this asked that the federation forward a request to all central labour bodies urging patronage for retail stores which employ union clerks. This resolution was adopted, as was also a statement by the committee challenging "all true friends of the union labour cause to new wars on union label aggressiveness."

Legislation

The Committee on Legislation dealt with the references in the report of the executive council as well as with several resolutions. The committee noted with approval the progress made legislatively during the 71st Congress despite the antagonistic attitude of leaders in the House of Representatives. The committee recommended "that the executive council take appropriate steps toward bringing about a liberalization of the House parliamentary rules to prevent the throttling of legislation by sharp parliamentary tactics which are subversive of representative government." The committee approved of the executive council's efforts to secure the passage of legislation designed to provide for the payment of prevailing rates of wages on public works and buildings in the United States, and also urged the council to continue its endeavours to secure the early enactment of the Panama Retirement Bill on behalf of the employees of the Canal Zone.

Satisfaction was expressed with the efforts made to prevent unfair prison competition with free labour, as well as with the passage of a liberalized civil service retirement law. On the question of wages in road building the committee recommended that the executive council inquire into the feasibility of legislation limiting or withholding federal appropriations for road construction to those States that will not guarantee certain prescribed standards of employment.

The committee also recommended that the executive council (1) press for the speedy establishment of a safety bureau in the United States Department of Labour; (2) "expose the fallacy and danger" of the proposed "equal rights" constitutional amendment, (3) to fight for a constitutional change which will prevent the blockage in the House of Representatives of legislation which has had favourable action in the Senate, (4) endeavour to secure legislation which will not deny the school teachers in Washington the right of freedom of utterance or approach to committees of Congress for redress of their employment grievances.

On the question of convict labour competition with free labour the committee joined with the executive council in urging State federations of labour to take action with a view to securing suitable convict labour legislation. The committee approved of the success of the officers of the A.F. of L. in having legislation adopted to bar foreign convict labour products from importation.

The Committee on Legislation also approved of resolutions as follows: (1) Endorsement of bills designed to correct abuse of patents in the Radio Act of the United States, (2) Endorsing bill providing for modernization of United States battleships, (3) Favouring bill providing for four-hour day on Saturdays throughout the year for all Federal employees, (4) Favouring passage of bill proposing restriction of employment of enlisted men in Navy in competition with civilian workers, (5) In favour of radio broadcasting rights for U.S. Departments of Agriculture, Labour and Interior for apportionment of stations of the most representative groups, (6) Endorsing Senate bill providing pensions for crews of transportation vessels used in U.S. military service, (7) Urging immediate enactment of bill regulating immigration of Filipinos, (8) In favour of shorter working week in U.S. Postal service, (9) In favour of law providing that only civilian mechanics shall be employed on Federal penal institution construction work, (10) In favour of improved employment standards for the U.S. civil servants, (11) In favour of increased wages for U.S. postal labourers. The committee recommended referring to the executive council a resolution favouring extending age limit for applicants for employment in Federal Government service.

In regard to the importation of Russian anthracite coal to the United States the executive council reported that an investigation was in progress by the government, report on which would be made to the next session of Congress. The Committee on Legislation, the report of which was adopted, recommended that the executive council watch carefully the legislative developments that may follow as a result of the investigation mentioned.

Committee on Executive Council's Report

The Committee on the Executive Council's Report which in the main dealt with trade jurisdictional matters, expressed satisfaction with the data which the council presented in regard to benefits provided by the various national and international organizations. The committee congratulated the officers and members of the trade union movement on their tendency to compose their jurisdictional differences. The report stated that the disputes between the stationary firemen and engineers and that between the hodcarriers and the independent bricklayer's union of New York city had been settled. Where adjustments had not been effected the committee recommended that the executive council continue their efforts to this end. These include (1) Cigarmakers—tobacco workers; (2) Flint glass workers—glass bottle blowers; (3) theatrical stage employees—electrical workers and some other organizations affiliated with the Building Trades Department; (4) Teamsters—railway clerks; (5) Flint glass workers —machinists. The committee approved of the changes in titles of three organizations as well as in the selection of a successor to the late J. P. Noonan on the executive council, and also recommended (1) that the request of the Hotel and Restaurant Employees and Beverage Dispensers' International Alliance for transfer of sleeping car porters to that union be referred to the executive council, and (2) that the painter's request for extension of jurisdiction be also referred to the council. The report of the committee was adopted.

Committee on Building Trades

The Committee on Building Trades in dealing with the section of the executive council's report in regard to prevailing rates of wages on government buildings commended the council for their efforts in behalf of securing the necessary legislation, and stated: "The Government of the United States should be first in upholding the American standard of living, not only by calling conferences at the White House, but in actual execution of work carried on by the Government." The committee reported favourably on resolutions protesting against (1) The labour policy of chain stores, (2) the labour policy of War Department in West Point construction work; (3) employment of convict labour in cutting granite for state office building in Madison, Wis. The recommendations were adopted.

Five-Day Week

The Committee on Shorter Work Day in reporting on the section of the executive council's report entitled "Union Progress," and with particular reference to "Five Day Week," commended the council for the survey made on the subject. The council was also commended for the efforts made to secure a four-hour day on Saturday for all Federal employees. Resolutions were recommended for adoption as follows:—(1) In favour of eight-hour day for fire-fighters (2) In favour of eight-hour work day for all women and minors in the States not now having 48-hour work week.

Favourable report was made by the committee on a resolution asking for declaration by the federation for a basic five-hour work day. The Committee disapproved of a demand for a demonstration in favour of the same request, wherein the workers were asked to lay down their tools for one day "as a symbol of their determination to secure the five-day week as labour's contribution towards the stabilization of employment."

The report of the committee was adopted.

Jurisdictional Disputes

To the Committee on Adjustment was referred four resolutions in regard to jurisdictional claims, the first being a complaint from the International Federation of Technical Engineers, Architects and Draftsmen's Unions that the National Federation of Federal Employees was infringing on its jurisdiction and asking that the executive council investigate and adjust the dispute. The committee reported favourably on this request. On a complaint by the Building Trades Department against the United Brotherhood of Carpenters and Joiners the executive council was instructed to make an effort to compose the differences. A dispute over jurisdiction between the International Union of Pavers, Rammermen, Flag Layers, Bridge and Stone Curb Setters and the International Hod Carriers, Building and Common Labourers was referred to the president of the federation to call a conference of the unions concerned within 90 days after the adjournment of the convention with a view to adjusting the difficulty. In regard to a controversy between the Paving Cutters' Union and the Granite Cutters' Association over the cutting of ashlers the committee reported in favour of the work being conceded to the granite cutters. This and other recommendations of the committee were adopted.

Older Workers

The Committee on State Organizations approved in the recommendation of the executive council that all State federations urge upon their state labour bureaus the necessity for making studies of older workers within their respective jurisdictions, as it was considered that out of such studies would come additional material and constructive suggestions as to how to best care for the elderly workers, the facts to be given to the public. The Committee concurred in the recommendation of the executive council that the conditions in Porto Rico should be remedied by legislation, invoked by American labour, and should be immediately acted upon.

On a resolution seeking to have a more general affiliation of local unions with state federations of labour and city central bodies the committee recommended that each international organization in affiliation with the federation include a provision in its constitution to the effect that its local unions shall become identified with the various state and central bodies in their respective localities.

Education

The Committee on Education expressed its congratulations that intelligent, constructive forces throughout the nation are looking more and more to labour for the development of increased social support for education. In order that the historic concern of organized labour with education, and especially with public education, may be maintained, the committee recommended that State federations of labour and local central labour bodies be urged to maintain committees on education which will include representatives of teachers' unions wherever they exist.

The committee reported on the various sections of the executive council's report which were referred to it for consideration, these including (1) The *American Federationist,* (2) A.F. of L. *Weekly News Service,* (3) *Monthly Review of Business,* (4) Labour Library, (5) Notes for speakers, (6) Organizing literature, (7) Legal Information Bureau, (2) Committee on education, (9) Workers' Education Bureau, (10) Maternity and infancy, (11) Free text books, (12) Censorship, (13) Vocational education and rehabilitation, (14) Workmen's compensation, (15) Labour's special days, (16) Samuel Gompers' Memorial, (17) Celebration of 200th Anniversary of Birth of George Washington.

The Committee on Education called attention to the growth of Parent-Teachers' Associations and urged the federation to inform its members regarding this movement and encourage participation in its activities. Regarding a resolution on illiteracy which asked the federation to declare for a standard equivalent to that reached by fourth grade children in the elementary schools, and asking that this standard be adopted by the Federal Government and used in census enumerating and in other situations where literary tests are required, the committee recommended its adoption. The committee also approved of a resolution in favour of tenure of positions by school teachers after two years of temporary service, and urged this as a policy for boards of education; and recommended referring to the executive council a resolution in opposition to military training in the public high schools, the executive to investigate the matter and report to the 1931 convention.

The report of the committee on all items was adopted.

Industrial Relations

To the Committee on Industrial Relations were referred resolutions, which protested against the labour policy of certain employers, as follows:—(1) A United States railroad; (2) A Chicago company; (3) Hotel managers in Cleveland, Ohio; (4) A New York hat company; (5) A Louisville tailoring establishment. These were, on recommendation of the committee, referred to the executive council to endeavour to bring about satisfactory settlements. The executive council was also instructed to assist the Stove Mounters' International Union in a controversy with a New Jersey firm.

The Committee on Federated Bodies, had only one resolution referred to it. This asked authorization for the formation of separate unions of municipal supervisors and inspectors. The request was referred to the executive council.

Unemployment

The first matter reported on by the Committee on Resolutions was the reference in the executive council's report on unemployment. After a discussion of the subject the committee submitted the following recommendations:

1. That the Executive Council be instructed to request the President of the United States to immediately appoint a national committee to recommend measures for immediate relief, having in mind proposals that can be carried out by private and quasi public agencies and enterprices, as well as by the departments of the federal government, the departments of the state governments and by municipalities, counties, school districts and other divisions of government.

2. That the Executive Council be instructed to call upon all State federations of labour to request the governors of their respective states to appoint state committees to co-operate with the national committee proposed in paragraph one, and to initiate recommendations within their respective states.

3. That the Executive Council be instructed to call upon all affiliated central bodies in the United States to urge the mayors or similar officials of their respective cities to immediately appoint city committees to co-operate with the state and national committees provided for in paragraphs one and two and to initiate relief programs within their respective cities.

4. That the Executive Council be instructed to proceed in such manner as the Council may find practicable to bring about the establishment of similar committees in localities where there are no affiliated central labour organizations through which to act.

5. That the Executive Council determine the best procedure to follow in obtaining appointment of similar committees in the territories of Alaska, Hawaii and Porto Rico.

6. That the affiliated central bodies in the Dominion of Canada be urged to co-operate with the Canadian Trades and Labour Congress in the promotion of unemployment relief measures in Canada.

The recommendations of the committee were adopted.

Unemployment Insurance

Four resolutions in favour of unemployment insurance were referred to the Resolutions Committee, together with a resolution proposing the appointment of a committee to make a study of remedial legislation to relieve unemployment. On recommendation of the committee all the resolutions were referred to the executive council for consideration in connection with the study of the subject which the council recommended in its report as part of labour's program, and which was endorsed by the convention.

The committee expressed approval of the employment statistics which the executive council had gathered, and also concurred in a resolution requesting the President of the United States to create a long range planning committee of public works to avert unemployment, as well as in a demand proposing adjustment of patent laws so that workers and society may be benefited by automatic machinery and scientific processes which now cause unemployment.

"Yellow Dog" Contracts

Under the above heading the Resolutions Committee referred to the section of the report of the executive council which read as follows:

The outstanding victory of labour was the defeat of the confirmation of the appointment of Judge John J. Parker to be a member of the United States Supreme Court, mainly because of his decision upholding the "yellow dog" contract.

The committee congratulated the executive for the effective and intelligent manner in which the members successfully opposed the appointment of Judge Parker "because of his anti-labour prejudices".

Border Crossing Privileges

The Resolutions Committee approved of the report of the executive council on the subject of immigration and recommended that the council urge Congress to enact legislation designed to reduce immigration into the United States. The convention approved of a resolution in favour of legislation providing for appropriation for border patrol to enforce restrictions against Mexican immigration. Approval was also given to resolutions (1) Urging enactment of legislation restricting Filipinos and Mexican immigrants; (2) In favour of the abolition of border crossing privileges for the purpose of employment. to the end that workers in the United States living near the border shall be freed from competition of those not living in the United States.

Modification of Volstead Act

The Resolutions Committee recommended adoption of that portion of the report of the executive council which dealt with the modification of the Volstead Act so as to provide for the manufacture of beer of 2.75 per cent alcoholic content by weight, and which pointed out that the council was in no way demanding repeal of the eighteenth amendment to the constitution of the United States. Two resolutions were also introduced favouring the repeal of the Volstead Act, but the convention accepted the recommendation of the committee for modification, and the two resolutions were not concurred in.

Anti-Injunction Legislation

The executive council's report referred to the injunction problem in labour disputes in the United States, and submitted a copy of the anti-injunction bill prepared by a subcommittee of the Committee on Judiciary of the United States Senate as a substitute bill, which follows the general outline of the bill as endorsed at the Toronto convention in 1929. The Resolutions Committee recommended that the action of the Toronto convention be reaffirmed in that the executive council be again authorized to provide for

such changes or amendments to the anti-injunction bill as in the judgment of the council may seem necessary. The committee also urged that the members of every affiliated union and delegate body do their utmost to bring about the election of congressional candidates favourable to the labour cause and to secure defeat of those who stand for a continuance of the present injunction evil. The report of the Resolutions Committee was adopted.

A resolution seeking to promote enactment of injunction relief legislation was referred to the executive council.

Non-Partisan Political Campaign

The Resolutions Committee approved of the report of the executive council which related the activities engaged in during the year under the non-partisan political policy of the federation. The committee urged all wage-earners and all sympathetic to labour's appeal to join wholeheartedly in the non-partisan political campaign of the federation.

Navy Yard Employees

At one of the sessions the attention of the delegates was called to what was termed an attempt to reduce wages in the navy yards of the United States by a reclassification of employees. On the strength of this information it was decided that the president of the federation and the officers of the Metal Trades Department call on the President of the United States and enter a vigorous protest against the orders which affect the wage structure in the navy yards, and that the president and secretary of the federation send a telegram immediately to the President of the United States protesting against the practice complained of.

Sought to Force Affiliation

To the Committee on Law was submitted a resolution which sought to amend the constitution of the federation so as to compel branch unions of the affiliated organizations to affiliate with State federations, city central bodies and building trades councils in their respective districts upon notification to so affiliate being received from the presidents of the respective organizations, or have their charters revoked. The committee pointed out that the affiliated national and international organizations are guaranteed the right to administer all matters pertaining to their internal affairs, and therefore non-concurrence was recommended. The committee, however, further recommended that the president of the federation make a special effort during the year to bring about a more complete affiliation of local unions with these delegate bodies. The report was adopted.

Other Resolutions

Approval was given to the report of the executive council on old age pensions, in which it was stated that agitation for old age pension legislation was spreading throughout the nation. The convention referred to the executive council a resolution asking for representation of joint councils of women's auxiliaries in A. F. of L. conventions. Other resolutions approved by the convention were as follows:—

In favour of the executive council investigating the program of the Pan-American Institute of Reciprocal Trade Relations and giving support if warranted;

Protesting against the establishment of a luggage factory in the Missouri Penitentiary;

Urging adoption of legislative program for relief of people of Porto Rico;

Urging establishment of a federal bureau to test the effect upon the health of workers of chemical materials used in industry;

Endorsing the appeal of actors and musicians for support of the popular movement against mechanizing the cultural arts;

In favour of the extension of trade union organization among theatrical wardrobe attendants;

Proposing protective legislation for union labels in the District of Columbia;

Urging the employment of civilian workers on mechanical work for army and navy;

To protect interests of union labour in Boulder Dam work;

In favour of legislation in the matter of radio broadcasting;

Urging patronage of fair concerns in the textile industry;

Protesting against modification of what is known as the Packers' Consent decree, by which the packers agreed to confine their activities to the packing industry;

Urging legislation for the disposition of the Muscle Shoals project in such a way as to protect the public;

In favour of the Independence of the Philippine Islands;

Condemning lynching;

Proposing the use of granite in new post office buildings;

Favouring a pardon for Thomas J. Mooney and Warren K. Billings;

Endorsing the program of the celebration of the 200th anniversary of the birth of George Washington;

Opposition to all forms of intervention in behalf of the present government of Cuba;

Opposition to the employment of alien workmen upon construction of ships built by the United States.

A resolution proposing memorial tribute to Samuel Gompers and deceased leaders was referred to the executive council.

Aid to Danville Strikers

At the morning session of the eighth day two representatives from the striking textile workers in Danville, Va., gave accounts of the strike in that locality. Following the addresses the representatives were given permission to pass among the delegates and solicit financial assistance, the sum of $1,121 being realized.

Memorial to Deceased Members

At the morning session of the fourth day a memorial service was held as a tribute to 46 well-known trade unionists who had passed away since the 1929 convention, the delegates and visitors standing in silence for a brief period.

President Green Honoured

The Resolutions Committee directed the attention of the delegates to an honour which had been bestowed on Mr. Wm. Green, president of the federation, he having been selected by the Roosevelt Memorial Association as one of the three citizens of the United States who had contributed distinguished service to social progress. The outstanding service of President Green to industrial peace in the past year was cited by the association as the basis for the award. The committee expressed gratification that the president should have been so signally honoured.

Fraternal and Other Addresses

At the afternoon session of the fourth day the addresses of the fraternal delegates were delivered. Mr. Wm. E. Stephenson, of Moose Jaw, Sask., member of the Brotherhood of Railway Carmen, extended the greetings of the Trades and Labour Congress of Canada, the fraternal messages from the British Trades Union Congress being given by Mr. Allan A. H. Findlay, general secretary of the United Pattern Makers' Association, and Mr. Arthur Shaw, general secretary of the National Union of Textile Workers. Fraternal greetings from the National Womens' Trade Union League were extended by Miss Matilda Lindsay, and from the Womens' International Union Label League and Trade Union Auxiliary the greetings were offered by Miss Anna Fitzgerald.

Others who addressed the delegates during the course of the convention were: Hon. James J. Davis, United States Secretary of Labour; Hon. P. J. Hurly, United States Secretary for War; Hon. Robt. F. Wagner, Senator from the State of New York; Hon. David J. Walsh, Senator from Massachusetts; Mr. John P. Frey, secretary-treasurer of the Metal Trades Department of the A.F. of L.; Miss Mary Anderson, chief of the Women's Bureau of the United States Department of Labour; Hon. J. Hanford McNider, United States Minister to Canada; Mr. Eugene P. Carver, Jun., past commander, Veterans of Foreign Wars; Judge Frank Murphy, mayor of Detroit; Rabbi Edward Israel, chairman of the commission on social justice of the Central Conference of American Rabbis; Mr. Hugh K. Martin, former commander, Department of Ohio, American Legion; Rev. W. J. McGuire, president, St. Viator's College, Bourbonnais, Ill.; Mr. Ralph T. O'Neil, national commander of the American Legion; Rev. Chas. S. MacFarlane, general secretary of the Federal Council of the Churches of Christ in America; Rev. Charles N. Lathrop, D.D., national secretary of the department of social service of the Episcopal Church; Mr. J. Foster Smith, of Salem, Mass.; Mr. John P. O'Connell, of the United Textile Workers; Mr. Chas. Francis, of New York City; Miss Elizabeth Ward, of the Industrial Department, Young Women's Christian Association; Mr. Spencer Miller, Jr., secretary, Workers' Educational Bureau of America; Gen. Jacob S. Coxey, of Coxey Army fame; Dr. Lucas, the department commander of Massachusetts of the Veterans of Foreign Wars.

Presentations to Fraternal Delegates

In accordance with the established custom, the president of the federation made presentations to the fraternal delegates. To the two representatives from the British Trades Union Congress gold watches and chains were given, wrist watches being presented to their wives. Similar tokens were presented to the delegate from the Trades and Labour Congress of Canada and his wife.

Officers Elected

The officers elected for the year 1930-31 are as follows: President, Wm. Green, Washington, D.C.; first vice-president, Frank Duffy, Indianapolis, Ind.; second vice-president, T.

A. Rickert, New York, N.Y.; third vice-president, Matthew Woll, Washington, D.C.; fourth vice-president, James Wilson, Cincinnati, Ohio; fifth vice-president, John Coefield, Washington, D.C.; sixth vice-president, A. O. Wharton, Washington, D.C.; seventh vice-president, Joseph N. Weber, New York, N.Y.; eighth vice-president, G. M. Bugniazet, Washington, D.C.; treasurer, Martin F. Ryan, Kansas City, Mo.; secretary, Frank Morrison, Washington, D.C.

Fraternal delegates to the British Trades Union Congress, Joseph P. Ryan, New York, N.Y., and Joseph V. Moreschi, Quincy, Mass.

Fraternal delegate to the Trades and Labour Congress of Canada, Charles J. Case, Cleveland, Ohio.

Vancouver, B.C., was chosen as the convention city for 1931.

Sunday Services

At the Cathedral of the Holy Cross in Boston on the Sunday morning following the opening of the convention His Eminence, Cardinal O'Connell, who delivered the invocation at the opening of the convention, delivered an address to the delegates who attended the service. The president of the federation, Mr. Wm. Green, preached in Trinity Church in the evening, while about 50 of the delegates occupied pulpits of various churches at either the morning or evening services.

NOTES ON LABOUR UNION ACTIVITIES

Federation of Catholic Workers of Canada

The ninth annual convention of the Federation of Catholic Workers of Canada opened in Montreal on September 27, with 150 delegates in attendance. Forty-nine resolutions were presented for consideration, the first being in favour of the launching of a campaign against communism with a view (*a*) to having government authorities restrict communist activities, (*b*) to calling the attention of local administrative authorities on the existing danger, and (*c*) to securing the co-operation of all bodies for the maintenance of good order in this fight against communism. A second resolution on the same subject requested the Federal Government to declare illegal all communist meetings, to arrest communist organizers and speakers, to deport those who are foreign subjects and to imprison those who are British subjects. Both resolutions were adopted.

The convention adopted two resolutions on the question of immigration, the demands being (1) that the Quebec Government close the doors of the province to all immigrants, even to those intending to settle on the land; (2) that the Federal Government stop all immigration, including that from the British Isles, and return to their respective countries, at the expense of the transportation companies, those unemployed immigrants anxious to return or who are considered undesirable.

Unemployment.—In the matter of unemployment the convention adopted a resolution "to immediately and urgently ask the Federal, provincial and municipal governments and other public bodies to take whatever steps are necessary to avert the present acute unemployment crisis by going on with the public works already under way, while compelling the contractors to abstain from using machinery of any kind, especially for digging or excavating, in order to hasten such work to completion"; and further asking the Provincial Government to give more help to the farmers, and to organize colonization so as to make it more advantageous for the settlers.

Miscellaneous Resolutions.—Other resolutions, most of which seek provincial legislation, were adopted as follows:—

Requesting civil bodies to contribute a reasonable amount to the establishment atnd maintenance of a school of sociology for the training of efficient propagandists in social and labour matters;

Instructing the executive of the federation to further amendments to the Workmen's Compensation Act;

Favouring an increase in witness fees to $4 *per diem*;

Stricter enforcement of law governing sale of cigarettes to minors;

Requesting the Federal and Provincial Governments to subsidize employment offices conducted by labour unions;

In favour of the closing of stores at 1 p.m. on Saturdays.

In support of improvement of provincial industrial schools;

Requesting the Provincial Government of Quebec to restrict contracts for construction works to employers paying wages accepted by the National Catholic syndicates;

Requesting the Quebec Government, with a view to relieving unemployment, to apply the eight-hour working day to civil employees and to those employed on public works of the province;

That the Quebec Government be asked to enact legislation providing for a forty-eight hour week and a minimum salary of 50 cents per hour;

In favour of unemployment insurance;

Asking that the laying of iron rods in cement work (reinforced concrete) be recognized as a trade and paid at the rate of 70 cents per hour with a forty-eight hour week;

Asking the Provincial Government to abolish all private employment offices;

Asking that contractors be compelled to keep a list of the names and addresses of all their employees;

Asking the provincial board of health to compel digging contractors to furnish with helmets all of their workers employed where poisonous gas exists;

In favour of the appointment of a plumbing inspector in Three Rivers;

In favour of the appointment of a scaffolding inspector in Three Rivers;

Asking that all officials in the Department of Labour of Quebec be granted the same privileges as are given to other members of the civil service, such as superannuation, death insurance, etc.;

In favour of fair representation for the Catholic workers of Canada on all public bodies;

In favour of the Provincial Government amending the inspection regulations for electrical work;

Asking that the Provincial Government separate the Department of Labour from that of Public Works;

Asking the Council of Education to provide for instruction in labour questions in schools;

Asking the Provincial Government to award annual scholarships to the best pupils in the different technical schools of the province;

Asking the Quebec Government to adopt an Apprenticeship Act for the province similar to that of France;*

In favour of the Provincial Government appointing a committee for the practical prevention of accidents;

In favour of amending the Arbitration Act of Quebec in regard to disputes of police and firemen so as to provide for compulsory arbitration;

In favour of two-platoon system for firemen in cities with a population of over 30,000;

In favour of legislation limiting the hours of work, Sunday observance and abolition of night work in bakeries;

In favour of the Women's Minimum Wage Act of Quebec being extended to cover the women employed in stores;

Asking the Provincial Government to adopt a law to compel all employers (building contractors excepted) to give all of their employees of at least one month's service eight days' notice before dismissal, if such employees are not guilty of criminal negligence in the discharge of their duties;

Asking the Federal Government to find a legal way of ratifying, on behalf of the provinces, the different international labour conventions that do not conflict with provincial legislation;

In favour of the federation considering the advisability of asking the Provincial Government to rescind the Order-in-council which imposes a tax of one-tenth of a cent per ton per mile on truck owners.

Internal Matters.—The convention amended the constitution of the federation to provide that no charter be granted to unions, with the exception of those formed of labourers, whose monthly contributions are less than $1. It was also decided that the central councils be asked not to form any more unions unless such unions are compelled to affiliate immediately with the federation of Catholic Workers as well as with their respective trade federation. A resolution in favour of the *per capita* tax to the federation being increased from 3 to 5 cents per month for the next two years was referred to next year's convention.

There was also refered to the executive a resolution in favour of the federation affiliating with the International Federation of Christian Trade Unions.

It was decided to change the representation of local unions at conventions of the federation to be as follows: Less than 100 members, one delegate; 100 members, two delegates; 150 members, three delegates, with one additional delegate for each additional 100 members.

Officers were elected as follows: President, Chevalier Pierre Beaulé, Quebec; first vice-president, O. Filion, Montreal; second vice-president, Emile Tellier, Three Rivers; secretary-treasurer, Ferdinand Laroche, Quebec; directors, M. C. Bernier, Montreal, and J. E. A. Tremblay, Chicoutimi.

* A note on the Apprenticeship Act passed in France in 1928 was given in the LABOUR GAZETTE, February, 1929, page 195.

Commercial Telegraphers' Union of North America

The fifteenth regular and eleventh biennial convention of the Commercial Telegraphers' Union of North America was held at Montreal on September 8-12, 1930, with approximately sixty delegates in attendance. Alderman Bruno Charbonneau, in the absence of Mayor Houde, welcomed the delegates to Montreal. Before formally opening the convention for business, President F. B. Powers was presented with a gavel on behalf of the Montreal committee and the membership at large.

In the report of the general executive board a detailed account of the activities of the Union since the 1928 convention was presented. It was pointed out that owing to the illness of the president-elect, immediately after the last convention, Mr. Wesley Russell was appointed acting international president, which office he held for two months.

Complying with instructions received from the last convention, a printer policy committee was appointed with Mr. J. B. Alcorn as chairman. In the report of this committee were set forth the efforts made to retain positions for Morse telegraphers, regardless of equipment adopted by employers for the transmission of telegraphic signals.

Unemployment.—The convention, having convened as a committee of the whole to discuss the problem of unemployment, brought in the following recommendations; (1) Endorsing the principle of old age pensions and unemployment insurance; (2) That subordinate units make the six-hour day and five-day week part of their wage program; (3) That each subordinate unit appoint an unemployment committee to work out plans to relieve distress among the members.

Other Resolutions.—Among the resolutions adopted were the following:

Endorsing the position taken by representatives of station WCFL in demanding the right of a national broadcasting channel.

Authorizing the restoring of full constitutional rights and privileges of Canadian divisions.

Recommending the cancelling of all indebtedness of certain divisions to the International Union;

Increasing the *per diem* of officers from $10 to $12.50.

Favouring the continuance of the printer policy committee.

Restoring to subordinate units the right to admit expelled members.

Recommending that the general executive board be composed of at least one member from each of the three largest groups—commercial, broker and press.

Favouring the extending of time of funeral benefit participation of new members from six months to one year.

Officers elected were: President, Frank B. Powers, 113 So. Ashland Blvd., Chicago, Ill.; Secretary-treasurer, W. L. Allen, 113 So. Ashland Blvd., Chicago, Ill. Members of the general executive board—Chairman, C. McMahon, Saskatoon, Sask.; Secretary, W. J. McMahon, Milwaukee, Wis.; John B. Alcorn, Detroit, Mich.; G. R. Pawson, Toronto, Ont.; Arthur Markel, Washington, D.C.

Amalgamated Lithographers of America

With seventy-five delegates in attendance, the sixth convention of the Amalgamated Lithographers of America was held at St. Louis, Mo., September 15-20, 1930, and presided over by President Andrew J. Kennedy. The delegates were welcomed by Mr. E. F. Svoboda, president of local No. 5, St. Louis, after which addresses were delivered by Mr. E. J. Manion, president of the Order of Railroad Telegraphers, and Mr. G. B. Ganner, of St. Louis. The report of the credential committee, appointment of the various other committees and the report of the rules committee occupied the greater part of the first day's proceedings.

The report of the president showed that notwithstanding depression and technological changes, progress had been made in securing new members. He also urged the dividing of work so as to give employment to the greatest number. The convention referred to the international president for study and introduction of a recommendation of the finance committee for changes in book-keeping and transfer systems. A number of changes to the constitution were adopted.

Among the resolutions adopted were the following:—

Favouring model by-laws for use of newly organized locals, such by-laws to include wage scales.

Approving of the introduction of a resolution at the American Federation of Labor

convention advocating a "Labour compensation system" by which permanent employment at a steady salary would be assured.

Instructing the delegates to the American Federation of Labor convention to support any move which has for its object the building up of an independent labour party.

Favouring the establishment of compensation insurance for injured workers.

Advocating unemployment insurance and old age pensions.

Recommending the increase of the number of journeymen to each apprentice.

Favouring a shorter work week.

Requiring local unions to pay wages lost by delegates attending conventions.

Modifying strike benefit payments.

Recommending that the trade shop committee be made permanent.

The next convention city will be chosen by the executive council.

International Typographical Union

The seventy-eighth annual convention of the International Typographical Union was held at Houston, Texas, September 8-13, 1930, with approximately two hundred and fifty delegates in attendance. The delegates were called to order by Mr. J. H. Maginnis of the convention committee of Houston local union No. 87, and addresses of welcome were delivered by Hon. Dan. Moody, Governor of Texas; Hon. Walter E. Monteith, Mayor of Houston; Mr. Geo. H. Slater, executive-secretary Texas State Federation of Labour; Mr. George A. Wilson, president, Houston Trades and Labour Council, and Mr. B. F. King, president, Houston Typographical Union. President Charles P. Howard in opening the convention reviewed conditions during the past year, and informed the delegates that the unemployment problem was causing an increased number of local unions to give consideration to the five-day week. It was his opinion, however, that owing to the business depression and the attitude of the employers' associations, the time had not yet arrived for the International Union to legislate the five days as the maximum work week. The president quoted figures to show that the average earnings for the past fiscal year were increased by $44.61 per member.

The report of the secretary-treasurer showed total receipts, including balances in the various funds, of $8,798,570.34; expenditures totalled $2,497,075.90, leaving a balance on hand of $6,301,494.44. The total membership reported was 78,508, comprised in 784 local unions, being an increase of 1,566 members and 3 local unions.

The following recommendations of the committee on laws were adopted by the convention; (1) That any member who brings his case into court before exhausting remedies within the laws of the organization shall be liable for expulsion by the executive council; (2) That the executive council be authorized and directed to revise and reclassify the book of laws, so that everything that pertains to the internal government of the organization shall be placed in the constitution and laws, while matters relating to contracts and terms of employment shall be included in the general laws; (3) That each subordinate union in whose jurisdiction a piece or bonus scale is in operation must include in all proposed contracts a provision for an all-time-work scale; (4) That the words "headquarters city" be substituted for "city of Indianapolis."; (5) That the first vice-president's salary be increased from $4,000 to $5,200 a year. Propositions 2, 4 and 5 will be sent to a referendum vote of the membership and if carried a second referendum vote will be taken to select the headquarters city.

Among the resolutions adopted were the following:—

Instruction the executive council to study the question of establishing an advertising section of the *Typographical Journal;*

Urging President Hoover to appoint Mr. Frank Morrison, secretary of the American Federation of Labor, to his cabinet as the next secretary of labour;

Expressing profound sorrow at the passing of Mr. James M. Lynch, a former president of the International Union;

Requesting the executive council to assist and encourage all local unions in the introduction of the five-day week;

Instructing the executive officers to enter into negotiations with the incoming officers of the Mailers' Trade District Union to bring about a settlement of the differences which exist between the two organizations.

Boston, Massachusetts, was selected as the convention city for 1931.

International Photo-Engravers' Union of North America

The International Photo-Engravers' Union of North America recently held its thirty-first annual convention at Boston, Massachusetts, with fifty-four delegates in attendance from thirty-two affiliated local unions, representing approximately eighty-four per cent of the total membership. A section of the report of the executive officers dealt with the subject of "trade schools." It was alleged that some of these schools were enrolling students without regard to their character and the possibility of their using the knowledge thus secured in efforts at counterfeiting. Attention was directed to the fact that in thirty-seven cities agreements are in effect recognizing the forty-hour, five-day week. In regard to unemployment benefits, the delegates were informed that during the past year the general membership had contributed $337,456 to meet depressed trade conditions.

The convention approved of every assistance possible being given to some of the Canadian local unions to secure better working conditions. In connection with a resolution pertaining to the five-day, forty-hour week, submitted by the Manufacturing Photo-Engravers' Association of Philadelphia and endorsed by several other employers' clubs, the convention approved of the recommendation that the International officers, in co-operation with the officers of the Philadelphia local union, meet in conference with representatives of the Philadelphia employers' association and such other groups of employers as desire to participate, for the purpose of discussing this and other proposals which would be of mutual benefit and profit to the industry. It was also decided that the indenturing of apprentices be held in abeyance until conditions warrant, and that the executive council be empowered, where necessary, to negotiate agreements with a ratio of one apprentice to five journeymen. A proposal to establish an international out-of-work benefit fund was sent to a referendum vote of the membership.

The convention of 1931 will be held at Minneapolis-St. Paul.

International Federation of Trade Unions

The Sixth Year Book of the International Federation of Trade Unions, containing 250 pages, was published recently. Unlike former editions, it does not contain the reports of the affiliated organizations and the International Trade Secretariats. The statistical information, on the other hand, has again been greatly expanded, so that this Year Book constitutes the fullest and most recent compendium of information concerning the international and national trade union movements. It gives the latest available memberships and the correct addresses up to date of all the organizations affiliated with the I.F.T.U., and also of the International Trade Secretariats, and contains a full survey of the income and expenditure of the national centres affiliated with the I.F.T.U. and of the organizations affiliated with these centres, for the two years 1927 and 1928.

Special attention has been devoted in this edition to the table showing the various orientations of the trade union movement of the world. Those who are interested in trade unionism will find in it a very large and valuable collection of material, enabling them to obtain an insight into the position of the trade union movement in all parts of the world. A full description of the conditions of the trade union movements of the individual countries is also added. For the first time systematically classified information appears concerning the trade union movements of South America and colonial territories: in fact, for many countries trade union information is here given for the first time.

The Year Book may be obtained from the offices of the Trades and Labour Congress of Canada, 172 McLaren Street, Ottawa, price 80 cents.

Legislation prohibiting night work for minors has been enacted in all States in the United States except Montana and Washington, according to information made public by the United States Department of Labour. The constitutionality of these laws has been upheld under the police power of the State as being for the protection of the life, health and safety of minor children. Several of the States prohibit the engaging of minors within certain hours at night in any gainful occupation, while in other jurisdictions specified occupations and industries are enumerated.. In approximately 30 jurisdictions there are special provisions regulating the night hours of messengers. The most common period during which night work is prohibited in this group is from 10 p.m. to 5 a.m. The prohibition of street trades within certain hours at night is also provided in many of the States, these hours ranging from 7 or 8 p.m. to 5 or 6 a.m.

Agriculture and domestic service are as a rule excluded from the prohibitory provisions, as well as minors employed in mercantile establishments during the holiday season, usually Dec. 17-24, and inventory periods.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

50th Session of the Governing Body

THE Governing Body of the International Labour Office held its 50th session at Brussels on October 7-12. Canada was represented by Dr. Riddell (government) Mr. J. R. Shaw (employers) and Mr. J. Simpson (workers). Mr. Heyman, Belgian Minister of Labour, in welcoming the delegates, referred to the fact that Belgium had ratified most of the conventions adopted in the last eleven years, and stood third in the list of State members in this respect. Mr. Arthur Fontaine, chairman, presided over the meeting.

Mr. Albert Thomas, Director of the International Labour Office, expressed his gratitude to the Belgian Government for its co-operation.

"We have just been passing," he said, "through some weeks of very difficult work at the Assembly of the League of Nations. During those weeks we have considered our own position and studied our own work in the light of the great events which were taking place around us. It may have been an illusion, but we could not help feeling that there was much ground for hope. When we saw the difficulties of the economic position, and realized the prejudices, hesitations and timidities which were felt at the idea of attempting a new organization of economic life and developing economic co-operation between nations, we said to ourselves that perhaps the main object of our own Organization, which is to bring about satisfactory living and working conditions for the workers, and the fear of unemployment, which is at present weighing on some twelve or fifteen million workers, might provide the necessary stimulus and motive power to promote the work of the League of Nations. Again, when we realized how strong national opposition still is, veiled though it may be by the forms of diplomacy, we felt that the work in favour of social justice which is done by our Organization, by the Governing Body and by the Conference might represent an unrivalled opportunity of bringing about reconcilation and universal peace, for universal peace based upon social justice is the motto of our Charter. The more acute the feeling for social justice becomes among mankind, and the more strongly it inspires public opinion, the more sure we shall be of being able to make a contribution towards universal peace."

Conditions of Work in Coal Mines

The Governing Body considered the effect to be given to the resolution of the Conference placing the question of hours of work in coal mines on the agenda of its 1931 Session, and discussed the conditions of procedure under which the problem would be brought before the Conference.

It adopted by 16 votes to 5 a resolution stating that it was for the Conference to decide whether it would treat the question of hours of work in coal mines by a first or second discussion, but that as in any case it was right to give the Conference the opportunity of adopting either solution, and as it seemed all the less possible to rule out the alternative of a single discussion since the problem had already been examined by the 1930 Session, the Governing Body approved the circulation to Governments of a draft questionnaire drawn up by the Office, and instructed the Office to draw up for submission to the Conference (in the event of its deciding to proceed to a single discussion) a Report containing one or more Draft Conventions based on the replies of the Governments.

The Governing Body adopted a further resolution by which, without prejudice to the question of whether there was to be a single discussion or a double discussion, or whether or not a separate Convention on hours of work in lignite mines was to be drawn up, it requested the Director of the International Labour Office to complete in due course the information given in the report on lignite.

Agenda of the 1932 Conference

The Governing Body went on to discuss what questions might be placed on the agenda of the 1932 Session of the Conference.

It had before it a report by the Office on the law and practice regarding fee-charging employment agencies, and it decided to place the question of the abolition of such agencies on the agenda of the 1932 Session.

The Governing Body also provisionally selected the question of insurance against invalidity, old age and death, the question of holidays with pay, and the question of unemployment insurance. The Office will prepare a statement on the law and practice as regards each of these questions for submission

to the Governing Body at its January Session. In accordance with the Standing Orders, the Governing Body will, when it has these statements before it, decide at its January Session which of these questions are to be placed on the agenda of the 1932 Conference.

Maritime Questions

The Governing Body discussed the organization of the Preparatory Technical Conference on Maritime Questions, which it had been decided to hold in 1931.

It decided that the Conference should take place in October of that year. It will include all countries whose seagoing vessels, not including vessels of under 100 tons, represent a total gross registered tonnage of over 250,000 tons. The States in question, in order of tonnage, are as follows: Great Britain, Japan, Germany, Norway, France, Italy, the Netherlands, Sweden, Greece, Spain, Denmark, Canada, Brazil, Belgium, Australia, Argentina, China, Finland, Yugoslavia, Portugal and India. Each State will be asked to send one Government representative, one employers' representative, and one workers' representative. The representatives may be accompanied by technical advisers. The Governing Body will be represented at the Conference by three members, one from each group. Any shipowners' and seamen's representatives on the Joint Maritime Commission who are not sent as members of their national delegations will be invited to attend the Conference but will not have the right to vote.

Resolutions of the Fourteenth Conference

The Governing Body discussed the effect to be given to the resolutions adopted by the International Labour Conference last June (Labour Gazette, July, 1930, page 790).

Two of the resolutions are closely connected with the question of hours of work in coal mines. They will be brought to the notice of Governments in connection with the preparation of the next Session of the Conference, which will reconsider the whole problem.

The Governing Body decided to forward to the competent authorities of the League of Nations, and also to draw the attention of Governments, to a resolution by which the Conference expressed the conviction that, irrespective of the work of the International Labour Organization for unifying working conditions in coal mines, an economic agreement should be concluded as soon as possible between the coal-producing countries.

In accordance with the resolution of the Conference concerning the preparation of children and young persons for a fully developed life, the Governing Body authorized the International Labour Office to make a preliminary study of the general tendencies of the movement for workers' education.

Another resolution of the Conference suggested that agreements should be concluded between the Governments of the principal industrial countries regarding the annual reports of their factory inspectors. The countries in question would agree to instruct their factory inspectors to pay special attention in the ordinary course of their duties to one or two special questions with which they would deal in greater detail in their yearly reports. The International Labour Office would then co-ordinate and publish the information thus obtained. The Governing Body decided to forward this resolution to Governments and to draw their attention to the advantages of the proposed procedure.

The Governing Body then considered a resolution of the Conference concerning the question of freedom of association. The Governing Body instructed the Office to make a study of the problem of freedom of association, on the understanding that it would be desirable to undertake its regulation by successive stages, such as the guarantee of the actual principle of freedom of association, the organization and recognition of trade unions, the legal nature of their functions as regards labour questions, and so on. The Office will submit the conclusions of its studies to the Governing Body at its Session of April, 1931, so that the Governing Body may be in a position to decide which of the questions studied by the Office could be placed on the agenda of a future Session of the International Labour Conference.

Decisions of the Assembly of the League of Nations

The Governing Body then proceeded to discuss those decisions of the Assembly of the League of Nations which concern the International Labour Organization.

It took note of the resolution of the Assembly which recommended that in connection with the inquiry of the Economic and Financial Organization into world economic depression, account should be taken of the results of the inquiry conducted by the International Labour Office into unemployment, and that in general there should be constant collaboration between the various organizations of the League of Nations and the Office on questions falling within their respective competence.

Annual Reports Submitted under Article 408

The Governing Body discussed various proposals concerning the method of examining the annual reports which States are bound, under Article 408 of the Treaty of Versailles, to furnish on the enforcement of Conventions which they have ratified. The Governing Body adopted various practical measures intended to obtain fuller and more comparable reports, and also to obtain information regarding Conventions which Federal States have declared their intention of treating as Recommendations.

Conference on Silicosis

The Governing Body considered the report of the Conference on Silicosis which was held at Johannesburg from August 13 to 27, 1930 (LABOUR GAZETTE, October, 1930, page 1179).

The Governing Body decided to forward the report of the Johannesburg Conference to Governments and to draw their attention to the general recommendations put forward by the experts as regards preventive measures, compensation and after-care. It also approved the suggestions of the Office as regards the effect to be given to the recommendations of the experts referring to the organization and co-ordination of future scientific work.

Unemployment

The Governing Body considered a proposal for a thorough study of the principal causes of unemployment, in particular tariff competition between States, the unsatisfactory distribution of capital and raw materials, the unsatisfactory distribution of national wealth between the various classes of the population, the difficulty of adapting production to the requirements of consumption, the development of new industries and changes in industrial technique.

Dr. Riddell and Sir Atul Chatterjee pointed out that the study to be undertaken must cover all countries. Unemployment was not confined to Europe, and the position of the oversea countries must be borne in mind.

The Governing Body decided that the proposed special study should be carried out, and that the Unemployment Committee should settle the program of the work. The size of the Unemployment Committee will be raised from 3 to 12 (4 from each group) and it will be authorized to consult experts.

Danzig and the International Labour Organization

At its meeting on May 15, 1930, the Council of the League of Nations, at the request of the Governing Body of the International Labour Office, requested the Permanent Court of International Justice to give an advisory opinion, in conformity with Article 14 of the Covenant, on the following question: "Is the special legal status of the Free City of Danzig such as to enable the Free City to become a Member of the International Labour Organization?" On August 26, 1930, the Court, by 6 votes against 4, expressed the opinion that the special legal status of the Free City of Danzig did not enable the Free City to become a Member of the International Labour Organization.

Publications of the Office

A further series of brochures on "Occupation and Health," the encyclopaedia of hygiene, pathology and social welfare which is in course of preparation by the International Labour Office, has just appeared covering the following subjects: pottery industry; feathers; file-cutting; fire-lighters (rosin); firemen; gardeners and market gardeners; glanders; hotels and restaurants; hydroxylamine; factory surgeons; fatty substances; first aid; fishermen; gasses and fumes; gold; gold mines; homework.

Visit to Canada of Deputy Director of International Labour Organization

Mr. H. B. Butler, Deputy Director of the International Labour Office, Geneva, arrived in Canada during October for the purpose of conferring with the Dominion and some of the Provincial Governments in reference to the work of the Organization and of renewing touch with some of the principal organizations of employers and workers in Canada. This was Mr. Butler's third visit to the Dominion since the establishment of the International Labour Organization in 1919. His Canadian tour is being followed by a visit to the United States. On his arrival at Ottawa on October 27, Mr. Butler was received by the Hon. Senator Robertson, Minister of Labour, and later met the Hon. Sir George H. Perley, Acting Prime Minister, the Hon. Dr. Manion, Minister of Railways and Canals; the Hon. W. A. Gordon, Minister of Immigration; and the Hon. T. G. Murphy, Minister of the Interior.

In the course of his tour of Canada, Mr. Butler delivered addresses to representative local organizations as follows:—at Ottawa, the

Rotary Club, the Central Executive of the League of Nations Society, and the Ottawa Branch of the League of Nations Society; at Montreal, the Montreal Trades and Labour Council, and the Canadian Institute of International Affairs; at Toronto, the Empire Club, the Women's Canadian Club, the Canadian Manufacturers' Association, and the Trades and Labour Council; at Winnipeg, the Men's Canadian Club, the Women's Canadian Club, the Trades and Labour Council, and the Canadian Institute of International Affairs; at Edmonton, the Trades and Labour Council; at Saskatoon, the Trades and Labour Council; at Regina, the Trades and Labour Council and the Men's Canadian Club.

In his various addresses Mr. Butler laid stress on the economic inter-dependence of the nations of the world and the urgent necessity for such an organization as the International Labour Organization. He explained that the work of the League was divided between two branches, namely the League proper, dealing with political, economic and commercial problems, and the labour organization dealing with industrial and social questions. Already, he said, the economic organization of the League had materially assisted in the re-establishment of Austria, Hungary, Greece, and Bulgaria. He stated that a conference would be held shortly to promote concerted economic action in Europe, the results of which will be of greatest importance for the rest of the world as well.

With reference to industrial problems, which lie within the province of the International Labour Organization, Mr. Butler pointed out that the Organization was endeavouring to promote social justice in the world and to establish international standards, so that one country might not gain undue advantage over another by such methods as the payment of low wages, the working of long hours of labour, employment of women and child labour, unsanitary conditions, etc. In this connection he referred to the 27 conventions, which had been framed by the International Labour Conferences which he explained were tantamount to treaties that had been adopted by the representatives of the nations comprising the league. As a result there is being established an international code which has not merely maintained the standards of living that existed before the war, but has raised such standards in most of the countries. Mr. Butler pointed out that Canada stood fifth in the League's official list of industrial powers, and also had a great oversea trade.

International Industrial Relations Association

Some account of the work of the International Industrial Relations Association was given in the Labour Gazette, May, 1930, page 546. The Council of the Association met at Geneva in September to consider the program for the next general conference. It was decided that this conference should be held in Amsterdam in August, 1931, and that it should deal with the dependence of satisfactory human relations in industry upon the scientific adjustment of economic resources, production and consumption. The following statement issued by the Association indicates the reasons for choosing this subject:—

"There is an ever growing realization of the fact that industrial relations are profoundly disturbed because neither labour nor capital can function in a world of underconsumption. Unemployment to-day is widespread through the world. Markets are restricted by lack of purchasing power. Productive capacity has been enhanced at an increasingly rapid rate, by mechanisation and the advance of technological invention. In a world of enlarged economic resources, groups of industry, whether conceived as employer-employee, labour-capital, producers-consumers, are prevented from functioning normally, that is, human relations in industry are not satisfactory. Therefore all groups concerned in economic life are compelled to ask: Can the methods of science be utilized to achieve balance between resources, production and consumption? Can science be substituted for casualism in the development of economic policy? How can sufficient information be placed at the disposal of those who must form economic policy in separate companies, in industries and in nations, so that they may know all the factors in the problem of adjusting resources, production and consumption?

"The answer to the question must be sought by all groups in co-operation. If one group imposes its limited interests upon another, if output be restricted by labour, if prices be held artificially high by monopolistic business, if Governments limit the contributions of their national areas to the world's economic life, balance is disturbed for all.

"The International Industrial Relations Association proposes therefore that these vital questions be studied in a congress in which employers, labour and scientists collaborate in compiling facts and in discovering how best to advance understanding of the problem."

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN SEPTEMBER, 1930

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on October 1, was 7,384, their employees numbering 1,020,676 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for September, was 1,737, having an aggregate membership of 205,910 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 67 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

(1) Employment Situation at the Beginning of October, 1930, as Reported by Employers

There was a further but smaller decline in employment at the beginning of October, according to statements received by the Dominion Bureau of Statistics from 7,384 firms, whose staffs aggregated 1,020,676 persons, as compared with 1,024,793 in the preceding month. This slight reduction was only what was to be expected on the basis of the experience of the last ten years. Activity on October 1, 1929, had also slackened; in fact, the decrease had then involved a larger number of workers, but employment last autumn was in greater volume than on the date under review. The index (based upon the average for the calendar year 1926 as 100) stood at 116·2 on October 1, 1930, compared with 116·6 on September 1, 1930, and with 125·6, 118·8, 110·3, 106·5, 99·5, 95·0, 100·7 95·8 and 91·3 on October 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The index on October 1, 1930, was for this time of year higher than in any other year on record except 1929 and 1928.

The most pronounced curtailment since the preceding month was in construction, in which it was seasonal in character, but the declines were very much less extensive than those reported on October 1 in recent years of the record; that this was so, was probably to some extent, a result of the unemployment relief program now underway. Manufacturing, particularly of lumber, animal food and iron and steel products, hotels and restaurants, steam railway operation and communications also released employees. On the other hand, logging, mining and trade were seasonally more active, while within the manufacturing group, seasonal improvement was also shown in the vegetable food and textile industries.

Employment by Provinces

Firms in Ontario and the Prairie Provinces afforded heightened employment, but elsewhere there were contractions, of which the most marked was in the Maritime Provinces.

Maritime Provinces.—Further large losses were indicated in the Maritime Provinces, where the 554 co-operating employers reduced their payrolls from 83,033 persons on September 1, to 78,519 at the beginning of October. This curtailment involved many more workers than that recorded on the same date of last year, when the index was higher than on October 1, 1930. Construction and manufactures reported the bulk of the decline, but the tendency was also unfavourable in logging, mining, services and transportation.

Quebec.—There was another decrease in Quebec, which, though not large, nevertheless exceeded that noted on October 1, 1929, when employment was brisker. Statistics were compiled from 1,695 firms with 287,732 workers, compared with 289,046 at the beginning of September. Manufacturing and construction registered most of the reduction, while transportation and services also afforded less employment. On the other hand, logging was seasonally active, and there was also a slight gain in trade.

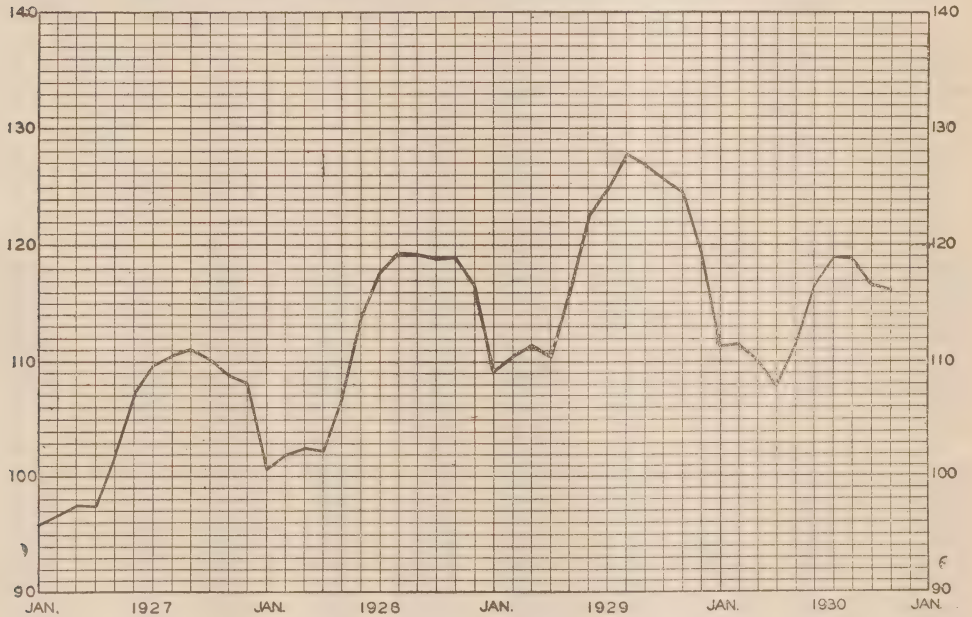
Ontario.—Improvement was indicated in Ontario, according to 3,271 employers of 411,267 persons, or 3,192 more than in the preceding month. Additions to staffs had also been noted on October 1 of a year ago, but employment then was in greater volume. Manufacturing, as a whole (particularly of food and textile products), logging and trade showed considerable seasonal advances, but there were losses in construction, transportation, communications and in iron and steel and lumber factories.

Prairie Provinces.—In contrast with the declines recorded on the same date in 1929 and 1928, there was a small increase in employment in the Prairie Provinces at the beginning of October. This took place chiefly in mining and transportation, while manufacturing, construction, trade and services showed curtailment. The index was, however, a few points lower than on October 1 of last year. Returns for the date under review were received from 1,109 firms with an aggregate working force of 154,948 employees, compared with 154,736 on September 1.

British Columbia.—Employment in British Columbia showed further curtailment, mainly in manufacturing, construction and services, while logging and trade reported heightened activity. Data were tabulated from 755 employers, whose payrolls declined from 89,903 persons on September 1 to 88,210 at the beginning of October. Losses on a rather larger scale were registered on October 1, 1929, but the index then was several points higher.

Table I gives index numbers by economic areas.

Employment by Cities



The trend of employment was upward in Montreal, Toronto and Ottawa, but downward in Quebec, Hamilton, Windsor and the adjacent Border Cities, Winnipeg and Vancouver.

Montreal.—There was an increase in employment in Montreal, where the 926 cooperating firms employed 142,392 persons, or 1,448 more than on September 1. Manufacturing, shipping, construction and trade reported the bulk of the gain; in manufacturing, textile and tobacco factories, in particular, showed higher employment. Improvement had also been noted on the corresponding date of last year, when employment was in greater volume.

Quebec.—Employment in Quebec showed a small decrease at the beginning of October, 33

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

workers having been laid off since September 1 by the 125 employers whose returns were compiled, and who had 14,131 on their pay-lists on the date under review. There were losses in services, but manufacturing showed improvement. The index was higher than at the beginning of October, 1929, when greater curtailment was indicated.

Toronto.—Expansion was indicated in Toronto, according to 1,000 firms employing 123,805 persons, compared with 122,247 in their last report. Manufacturing (particularly of textile, iron and steel and lumber products) was much busier, as was trade. Similar additions to staffs had been reported on October 1 of a year ago, but conditions then were generally better.

Ottawa.—Building and manufacturing were more active, while road work showed a decrease. The forces of the 148 employers fur-

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by districts as at Oct. 1, 1930	100·0	7·7	28·2	40·3	15·2	8·6

nishing data aggregated 13,660 workers, or 163 more than on Sept. 1. The index of employment was practically the same as on the same date in 1929, when similar gains had been noted.

Hamilton.—Curtailment was registered by construction firms and in manufacturing, in which iron and steel and building material plants showed the most pronounced loss. Statements were tabulated from 216 firms with 30,999 employees, compared with 31,638 in the preceding month. The index number at the beginning of October of last year was many points higher, although the trend of employment then was also downward.

Windsor and Adjacent Border Cities.—There was a falling-off in the number employed in the Border Cities, mainly in automobile factories. One hundred and thirty-five establishments recorded 14,018 employees, as against

Note.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by cities as at Oct. 1, 1930	14·0	1·4	12·1	1·3	3·0	1·4	3·2	3·0

14,941 on September 1. Contractions had also been reported on October 1, 1929, but employment was then in greater volume.

Winnipeg.—Employment in Winnipeg showed a recession on October 1, when the forces of the 353 co-operating firms aggregated 32,853 workers or 484 less than in the preceding month. There were decreases in manufacturing and construction, while other groups showed little general change. Declines had also been indicated at the beginning of October of a year ago, when the index was several points higher than on the date under review.

Vancouver.—There was a loss in employment in Vancouver, according to 296 employers with 30,354 persons on their payrolls, compared with 30,660 on September 1. Manu-

NOTE.—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the tota number of all employees reported in Canada on the date under review.

facturing, especially lumber and canning factories, reported decreases, while construction and trade showed improvement. A larger reduction had been recorded on October 1, 1929, when the index stood at 111.7, as compared with 112.1 at the beginning of October of this year.

Index numbers by cities are given in Table II.

Manufacturing

There was a further decrease in manufacturing plants, 4,416 of which reported 520,166 operatives, compared with 522,047 in the preceding month. Vegetable food factories showed important seasonal improvement, and there were large gains in the textile division. Smaller additions to staffs were indicated in the fur,

TABLE IV—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	[1]Relative weight	Oct. 1 1930	Sept. 1 1930	Oct. 1 1929	Oct. 1 1928	Oct. 1 1927	Oct. 1 1926	Oct. 1 1925

[1]The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

musical instrument, tobacco, non-ferrous metal and miscellaneous group of manufactures. On the other hand lumber, animal food, iron and steel building material, non-metallic mineral products, rubber and pulp and paper factories registered curtailment, in some cases of a seasonal nature. A general increase in employment has been noted on October 1, 1929, when the index was many points higher.

Animal Products—Edible.—There were continued losses in fish-preserving establishments and in dairies. Statistics were received from 196 manufacturers, employing 18,944 persons, as compared with 20,504 in the preceding month. This contraction, which was most pronounced in British Columbia, was on a larger scale than that registered on the corresponding date last year, when the index was higher.

Leather and Products.—Tanning and miscellaneous leather product factories reported slight additions to staffs, but footwear plants were slacker. The 187 employers making returns reported 15,547 workers, or practically the same number as on September 1. An increase had been noted at the beginning of October a year ago, when the index number was many points higher than on the date under review.

Lumber and Products.—Further important reductions in personnel were indicated in the lumber group, in which employment was at a decidedly lower level than on October 1, 1929. The decreases took place almost entirely in rough and dressed lumber mills, while furniture and container factories were somewhat busier. A combined working force of 47,484 persons was reported by the 739 co-operating manufacturers, as compared with 50,775 at the beginning of September. Although the largest contractions were in British Columbia, the tendency was downward in all provinces.

Musical Instruments.—Additions to staffs on a larger scale than on October 1 a year ago, were registered in musical instrument plants, in which, however, employment was not s brisk as during last autumn. Thirty-seven establishments reported 2,123 employees, as compared with 1,871 in the preceding month. The bulk of the gain was in Ontario.

Plant Products—Edible.—Fruit and vegetable canning, chocolate, cocoa and confectionery, sugar and syrup factories and flour mills afforded heightened employment. The staffs of the 397 reporting firms aggregated 40,888 persons, or 2,798 more than in their last report. Employment was better in all provinces except British Columbia, Ontario showing the most pronounced expansion. The general gain involved a rather smaller number of workers than that registered on the corresponding date in 1929, when the index was decidedly lower than on October 1, 1930.

Pulp and Paper Products.—There was a decrease in the staffs reported by 540 employers in this group, who had 65,087 workers on payroll, as compared with 65,286 at the beginning of September; this took place chiefly in pulp and paper mills. The tendency was favourable in Ontario and the Western Provinces, but there were losses in the Maritime Provinces and Quebec. Improvement had been indicated at the beginning of October a year ago, when the index number was higher.

Rubber Products.—Employment in rubber goods showed a decrease on October 1, 1930, repeating the movement recorded on the same date in 1929 and 1928, when the level of employment in both cases was decidedly higher. Data were compiled from 39 firms with 13,766 employees, as against 14,094 in their last report. The curtailment took place almost entirely in Quebec and Ontario.

Textile Products.—Garment and personal furnishing, woollen, hosiery and knitting, and some other branches of the textile industry reported increased activity, while cotton mills released employees; 683 manufacturers enlarged their payrolls from 77,387 workers at the beginning of September, to 79,376 on the date under review. Ontario recorded the bulk of this expansion, but improvement was also shown in Quebec and the Western Provinces. Smaller gains had been noted at the beginning of October last year, but the situation then was more favourable.

Tobacco, Distilled and Malt Liquors.—There was an increase in employment in these industries on the date under review, according to the 145 establishments furnishing statistics, which employed 16,303 workers, or 281 more than on September 1. Employment continued in practically the same volume as in the autumn of 1929, while it was more active than in other years for which data are available. Firms in Quebec registered the gains, the tendency in other provinces being downward.

Clay, Glass and Stone Products.—Seasonal contractions were indicated in building material plants, in which activity was less than on October 1, 1929. The forces of the 163 co-operating employers declined by 767 persons to 13,147 at the beginning of October. The largest reductions took place in Quebec, Ontario and the Prairie Provinces.

Electric Current.—There was a decrease in electric current plants at the beginning of October, when 91 establishments reported 16,151 workers, compared with 16,233 on September 1. Improvement was indicated on the corresponding date last year, when the index number was several points higher.

Electrical Appliances.—Further additions to staffs were made in electrical apparatus works, 62 of which had 16,729 employees, or 72 more than in their last report. This gain was smaller than that noted on October 1, 1929, when the index number was practically the same.

Iron and Steel Products.—The heating appliance, ship building, machinery and foundry divisions of the iron and steel group registered increases in employment, while there was reductions in the vehicle, agricultural implement, structural iron and steel and other branches. Statements were received from 691 manufacturers, whose payrolls aggregated 126,429 persons, as compared with 127,786 in the preceding month. Employment declined in all provinces except British Columbia, but the largest losses were in Ontario. Rather more extensive curtailment had been indicated at the beginning of October last year, when employment was in considerably greater volume.

Non-Ferrous Metal Products.—The smelting and refining, aluminum, lead, tin, zinc, copper and precious metal divisions of this group reported small increases. A combined working force of 20,298 persons was reported by the 114 co-operating employers, who had 20,014 employees at the beginning of September. The index was practically the same as in the autumn of 1929.

Logging

Statements were tabulated from 215 logging companies, whose staffs were enlarged by 4,293 workers to 18,872 on the date under review. This advance was on a smaller scale than in the early autumn of 1929, when the index was much higher; in fact, employment on October 1, 1930, was in smaller volume than in the autumn of any other year since 1921. Camps in Quebec and Ontario absorbed most of the extra men.

Mining

Coal Mining.—There was a large increase in coal mines, in which employment was not so brisk as on October 1, 1929, despite the fact that the improvement then reported was less pronounced. Returns were received from 83 operators employing 28,415 persons, as compared with 26,945 in their last report. Gains were noted in the Prairie coal fields.

Metallic Ores.—Employment in this group on October 1 showed an increase; 67 employers reported 16,760 workers, or 269 more than at the beginning of September. Quebec and Ontario registered the bulk of the improvement. Similar advances had been noted on the corresponding date last year, when the index number was a few points higher.

Non-Metallic Minerals, other than Coal.—Reduced activity was reported in this group, in which statistics were received from 78 firms employing 8,131 persons, or 668 less than on September 1. There were declines in all provinces, except British Columbia, which showed a slightly upward tendency. The index was decidedly lower than on October 1, 1929, when smaller losses were indicated.

Communications

There was a falling-off in employment in communications, in which the companies and branches furnishing data reported 31,087 employees, as compared with 31,445 on September 1. The index was lower than in the autumn of 1929.

Transportation

Street and Electric Railways and Cartage.—A minor increase was indicated in local transportation, 28 persons being added to the forces of the 152 co-operating firms, who reported 26,127 on their payrolls. Employment in this industry was not quite so brisk as on October 1 last year.

Steam Railways.—Statistics were tabulated from 106 employers in the steam railway operation group, whose payrolls declined from 82,594 on September 1 to 82,067 at the beginning of October. A much more extensive loss had been indicated on the same date last year, when the index was higher. There were reductions on the date under review in all except the Western Provinces.

Shipping and Stevedoring.—Improvement was registered in the water transportation group, in which 82 companies employed 18,994 workers. This was a gain of 330 compared with their payrolls in the preceding month; the Maritime Provinces and Quebec showed increases, while there were losses in the Pacific ports. Large reductions had been noted on October 1 last year, when the index was lower than on the date under review.

Construction and Maintenance

Building.—For the eighth consecutive month, there was an advance in employment in building, 152 persons being added to the forces of the 751 co-operating contractors. They had 61,270 employees, but this number was smaller than that reported at the beginning of October a year ago, when important curtailment had been indicated. In the Maritime Provinces and Ontario there was further improvement, while the trend was unfavourable in Quebec and the Western Provinces.

Highways.—Work on highways and streets declined, as is customary at this time of year, but the decreases involved a smaller number of workers than in the early autumn of 1929, when the index was much lower. Statements were tabulated from 281 employers, whose staffs, standing at 50,747, were smaller by 3,925 persons than on September 1. There were contractions in all except the Prairie Provinces, those in the Maritime being most pronounced.

Railways.—Reductions in employment were reported on railway construction, especially in the Prairie Provinces. The forces of the 56 companies and divisional superintendents furnishing returns declined from 48,120 at the beginning of September to 45,558 on the date under review. This shrinkage was not so extensive as that registered on October 1, 1929, when the level of employment was rather higher.

Services

The closing of summer hotels largely accounted for a decrease of 1,141 persons in the staffs of the 248 firms in this group whose returns were received, and who employed 23,742 on October 1. The declines indicated on the same date last year involved a smaller number of workers, and employment then was more active.

Trade

Trade, especially retail stores, showed a pronounced increase in personnel; 782 establishments reported 88,740 employees, compared with 88,337 in the preceding month. The index stood at 127·9 compared with 128·2 on October 1, 1929, and with 120·1 at the beginning of October in 1928, the previous high level.

Tables

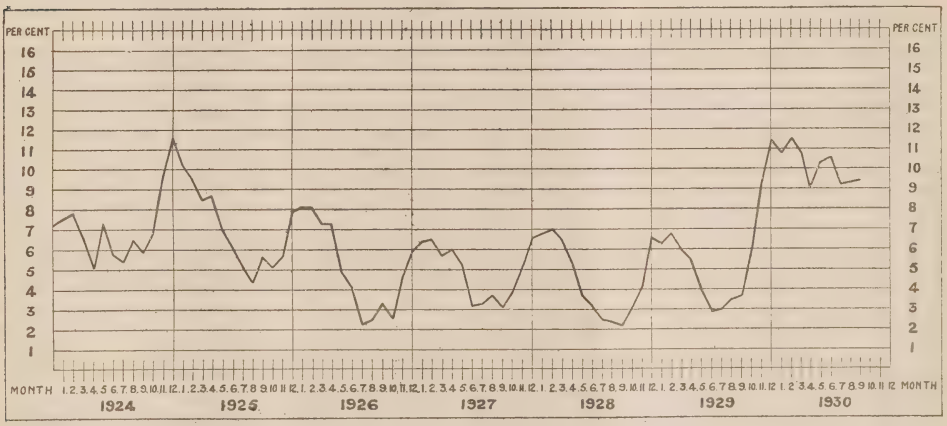
Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns on the date under review.

(2) Unemployment in Trade Unions at the Close of September, 1930

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades or who are idle because of illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The situation for local trade union members remained almost unchanged during September from the two preceding months, the percentages of unemployment reported during July, August and September this year standing at 9·2, 9·3 and 9·4 respectively. The September percentage was based on the returns received from a total of 1,737 labour organizations covering a membership of 205,910 persons. Conditions, however, continued to show marked depression from last year when at the close of September 3·7 per cent of the organized workers reported were idle. The Prairie Provinces indicated a somewhat upward employment trend during September from the previous month, the gain of about 3 per cent in Alberta being the most noteworthy and due to greater activity in the coal mines of that province. On the other hand, employment for New Brunswick, Quebec, Ontario and British Columbia unions was somewhat retarded, and in Nova Scotia the same percentage of idleness was manifest in the two months surveyed. All provinces suffered employment curtailment from September last year, the heaviest lossses occurring among Quebec, Ontario and British Columbia unions.

A separate tabulation is compiled monthly of unemployment in the largest city in each province with the exception of Prince Edward Island. Of these, Regina unions reported noteworthy employment expansion during September from the previous month, and Edmonton, Toronto and Winnipeg gains of 1 per cent or less. On the other hand, Halifax, Saint John, Montreal and Vancouver unions



showed slight curtailment of activity from August. In making a comparison with the returns for September last year Halifax showed the greatest increase in slackness during the month reviewed though in Montreal, Toronto, Vancouver and Regina also, the recessions indicated were substantial. In the remaining cities slightly adverse conditions prevailed.

The accompanying chart indicates the trend of unemployment by months from January, 1924, to date. Little change was shown in the level of the curve during September from the previous month, the tendency, however, being very slightly upward. The point attained by the curve at the close of the month was much above that shown in September a year ago indicating a less favourable situation for organized workers during the month under review.

The manufacturing industries with 501 unions including 60,254 persons registered 8·7 per cent of idleness at the end of September compared with 8·0 per cent in August and most important declines were those reported by iron and steel workers, general labourers and pulp and paper makers.

Improvement in the coal mining situation was indicated at the close of September from the previous month the 43 unions from which returns were tabulated with 16,191 members showing 3·0 per cent of idleness contrasted with 6·6 per cent in August. Little change, however, was registered from September of last year when 2·8 per cent of the members reported were without work. Alberta unions recorded the bulk of the increase in employment reported over August though conditions in the Nova Scotia mines also were slightly better. In British Columbia no members were reported idle in either of the months compared. A somewhat higher employment level was indicated by Alberta miners than in September a year ago while in Nova Scotia moderate reductions in activity were noted. British Columbia reported a fully engaged situation in both months compared.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

with 3·5 per cent in September last year. Pulp and papermakers, iron and steel workers and general labourers registered a moderate drop in the volume of work afforded when compared with August and among hat and cap makers, garment and textile workers, cigar makers, and metal polishers, employment eased off to some exent. On the other hand, bakers and confectioners, printing tradesmen, leather, wood, jewellery and glass workers registered somewhat heightened activity. All groups participated in the downward employment movement manifest in comparison with September of last year, a number of trades sharing extensively in this depression. The

Contrary to the steady though moderate declines in activity which have been reported in the building trades from month to month since the close of May, the employment tendency in September was slightly upward from that indicated in August. This was manifest by the returns tabulated for September from a total of 220 unions with 29,068 members of whom 8,114 were idle on the last day of the month, a percentage of 27·9 contrasted with 28·8 per cent in August. Bridge and structural iron workers, bricklayers, masons and plasterers, carpenters and joiners, granite and stone cutters and hod carriers and building labourers all shared to some extent this

slight expansion. Among painters, decorators and paperhangers the situation remained unchanged, while electrical workers, plumbers and steam fitters and tile layers, lathers and roofers registered some employment reduction. The building trades showed a marked increase in slackness during September from the same month of last year when 8·6 per cent of the members reported were idle, granite and stone cutters alone reporting improvement during the month reviewed which was but fractional. In the majority of the remaining trades the contractions reported were substantial the heaviest losses in employment occurring among bricklayers, masons and plasterers and carpenters and joiners.

TABLE I—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edward Island.	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

Aug. 1930	5·2	1·6	12·3	8·5	7·2	6·7	11·6	8·9	9·3
Sept. 1930	5·2	2·3	12·7	9·6	6·5	4·9	8·7	10·1	9·4

Employment in the transportation industries during September showed a nominal reduction only from the previous month, the percentage of idleness standing at 5.4 contrasted with 5.0 per cent in August. The percentage for September was based on the returns received from 738 unions with a combined membership of 72,102 persons. That the volume of unemployment for transportation workers was in advance of that indicated in August is due entirely to the declines recorded by steam railway employees, whose returns constitute about 81 per cent of the entire group membership reporting. Navigation workers, street and electric railway employees and teamsters and chauffeurs, on the other hand, all recorded some employment expansion. A lower level of activity was maintained by navigation workers and steam and street and electric railway employees during September than in the corresponding month of last year when the unemployment percentage in the transportation industries, as a whole, stood at 2.8. Teamsters and chauffeurs, however, were provided with adequate work during the month reviewed compared with a small unemployment percentage in September, 1929.

From longshore workers whose returns are tabulated separately each month, 13 reports were received at the end of September, embracing a membership of 6,099 persons. Of these, 682 were idle on the last day of the month, a percentage of 11.2 contrasted with unemployment percentages of 21.8 in August and with 12.4 in September last year.

Retail clerks at the close of September reported a fully engaged situation as in August contrasted with 2·5 per cent of inactivity in September last year. For the month reviewed returns were tabulated from a total of 7 unions with 1,305 members.

The 61 unions of civic employees from which reports were received in September with 7,079 members indicated 0·7 per cent of their members idle contrasted with 0·5 per cent in August and with 0·9 per cent in September a year ago.

The situation in the miscellaneous group of trades during September showed little variation from the previous month, according to the returns tabulated from 115 unions with a membership total of 6,494 persons. Of these, 781 were idle on the last day of the month, a percentage of 12·0 contrasted with 12·4 per cent in August. Hotel and restaurant employees reported noteworthy improvement from August and stationary engineers and firemen nominal gains only. Among theatre and stage employees, barbers and unclassified workers, on the other hand, slight reductions

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing.	Lumbering and Logging.	Mining.	Manufacturing industries.	Vegetable products.	Pulp and paper products.	Pulp and paper mill workers.	Printing, publishing and lithographing.	Wood products.	Fibres, textiles and textile products.	Textile and carpet workers.	Garment workers.	Hat, cap and glove workers.	Animal products.	Iron and its products.	Non-ferrous metals. in the employment volume were shown. Compared with the returns for September, 1929, when 4·3 per cent of idleness was recorded in the miscellaneous group of trades, theatre and stage employees, stationary engineers and firemen and unclassified workers all reported marked unemployment increases during the month reviewed and hotel and restaurant employees and barbers, declines in activity on a more moderate scale.

Fishermen reported an unemployment percentage of 1·5 at the close of September contrasted with a percentage of 1·2 in both the previous month and September a year ago. Returns for the month under review were tabulated from 4 unions of these workers, comprising a membership of 1,363 persons.

From lumber workers and loggers 4 reports were received in September covering a membership of 1,381 persons, 237 of whom, or a percentage of 17·2 were idle at the end of the month contrasted with 18·8 per cent in August and with 4·7 per cent in September last year.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1929 inclusive, and also the percentage of unemployment by provinces for September of each year from 1919 to 1927 inclusive, and for each month from January, 1928, to date. Table II summarizes the returns in the various groups of industries for the same months as in table I.

(3) Employment Office Reports for September, 1930

The volume of business transacted by the offices of the Employment Service of Canada, as shown by the average number of placements effected, daily, during September, 1930, showed declines when comparisons were made with the records of August, 1930, and with those of September a year ago. In the former instance the decrease registered was less than 1 per cent, while in the latter case it was nearly 26 per cent. The reduction from August was attributable to the decrease in farm placements, though construction and maintenance, transportation and mining also showed declines. Gains were made in manufacturing, logging, services and trade but these were insufficient to offset the losses shown in the other industrial divisions. In comparison with September of last year, all groups recorded fewer placements, the most pronounced contractions occurring in logging, farming, manufacturing and services.

The accompanying chart shows the trend of employment since January, 1928, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen that the curves of vacancies and placements in relation to applications declined steadily throughout the month, and at the end of the period under review the levels shown were much below those attained at the close of September a year ago, there being a decline of 26 points in vacancies and 19 points in placements. The ratio of vacancies to each 100 applications was 67·2 during the first half and 58·5 during the second half of September, 1930, in contrast with the ratios of 84·1 and 84·9 during the corresponding periods of 1929. The ratios of placements to each 100 applications during the periods under review were 62·1 and 55·5, as compared with 80·7 and 74·4 during the corresponding months of 1929.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during September, 1930, was 1,427, as compared with 1,407 during the preceding month and with 1,955 in September a year ago.

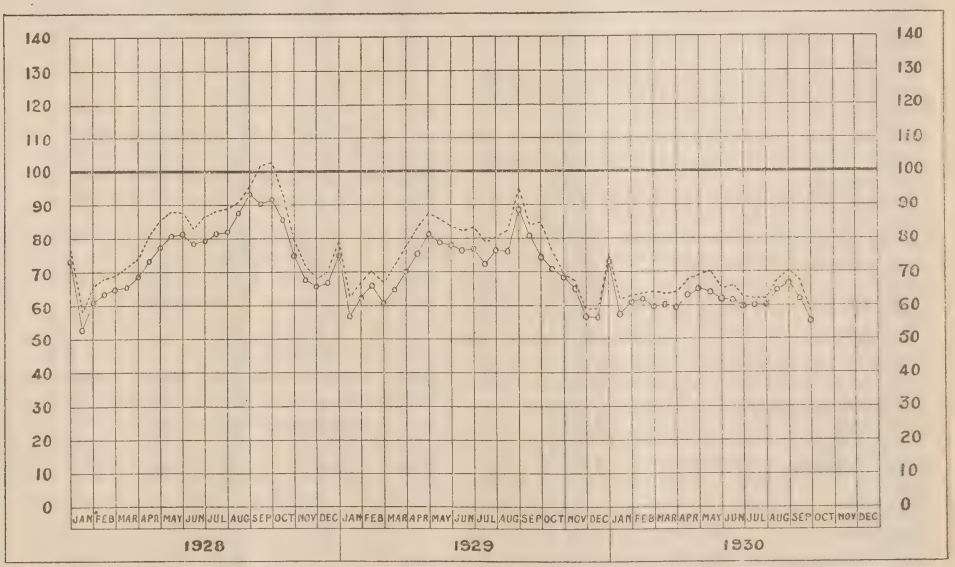
The average number of applications for employment received daily by the offices of the Service during the month under review was 2,270, in comparison with 2,037 in August, 1930, and with 2,314 during September last year.

The average number of placements made daily by the offices of the Service during September, 1930, was 1,335, of which 844 were in regular employment and 491 in work of one week's duration or less, as compared with a total daily average of 1,339 during the preceding month. Placements in September a year ago averaged 1,794 daily, consisting of 1,258 placements in regular and 536 in casual employment.

During the month of September, 1930, the offices of the Service referred 34,718 persons to vacancies and effected a total of 33,368 placements. Of these the placements in regular employment were 21,100, of which 16,396 were for men and 4,704 for women, while placements in casual work totalled 12,268. The number of vacancies reported by employers was 25,166 for men and 10,502 for women, a total of 35,668, while applications for work numbered 56,746, of which 42,129 were from men and 14,617 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1920, to date:—

Year	Placements		
	Regular	Casual	Totals
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926	300,226	109,929	410,155
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930 (9 months)	145,597	101,553	247,150



Nova Scotia

During the month of September, 1930, positions offered through Employment Offices in Nova Scotia were over 27 per cent less than in the preceding month and nearly 23 per cent below the corresponding month last year. Placements also were nearly 31 per cent below August and nearly 20 per cent less than during September, 1929. The reductions in placements from September last year were all attributable to inactivity in building construction. The decline in placements in this group was larger than the net reductions of all industries but was partly offset by increased placements under services and transportation. The changes in other industrial divisions were nominal only. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 44; transportation, 45; trade, 46; and services, 422, of which 359 were of household workers. Regular employment was found for 19 men and 93 women during the month.

New Brunswick

There was a nominal decline only in the demand for workers as indicated by orders received at Employment Offices in New Brunswick during September, when compared with the preceding month, but a reduction of over 27 per cent in comparison with the corresponding month of last year. Placements were a little over 1 per cent less than in August and nearly 15 per cent below September, 1929. Services was the only division to show any increase in placements over September last year. Of the declines, those in transportation, manufacturing and construction and maintenance were the most noteworthy. Placements by industrial divisions included: manufacturing, 22; construction and

maintenance, 71; trade, 26; and services, 550, of which 418 were of household workers. Placements in regular employment numbered 96 of men and 97 of women.

Quebec

During September, Employment Offices in the Province of Quebec received orders for nearly 26 per cent more workers than in the preceding month but nearly 33 per cent less than during the corresponding month of last year. There was a gain in placements of nearly 22 per cent when compared with August, but a decline of 39 per cent in comparison with September, 1929. The large reduction in placements from September last year was chiefly due to a reduced demand for workers in the logging industry, although the declines under construction and maintenance were also quite substantial. Somewhat smaller declines were shown under manufacturing, services and farming; there were nominal changes only in all other industrial groups. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 85; logging, 646; farming, 47; construction and maintenance, 366; trade, 38; and services, 640, of which 475 were of household workers. During the month 1,177 men and 477 women were placed in regular employment.

Ontario

Orders listed at Employment Offices in Ontario during September called for 33 per cent more workers than in the preceding month but over 24 per cent less than during the corresponding month of last year. There was an increase of 34 per cent in placements when compared with August, but a decline of nearly 15 per cent in comparison with September, 1929. The demand for bush workers was considerably less than during September last year, and placements in the logging industry showed the largest decline under this comparison. Reduced placements in the manufacturing industries, trade and transportation, also contributed to the unfavourable situation under this comparison. These declines, however, were offset in part by gains under construction and maintenance, services and farming, although the increases under construction and maintenance were largely due to work undertaken in relief of unemployment by certain municipalities. Industrial groups in which most of the placements were effected during the month were: manufacturing, 1,453; logging, 599; farming, 1,231; transportation, 246; construction and maintenance, 3,289; trade, 417; and services, 5,071, of which 2,704 were of household workers. There were 4,276 men and 2,014 women placed in regular employment during the month.

Manitoba

Opportunities for employment as indicated by orders received at Employment Offices in Manitoba during September were over 44 per cent less than in the preceding month and nearly 13 per cent below the corresponding month of last year. Placements also were 45 per cent less than in August and over 27 per cent fewer than in September, 1929. Farming was the only group in which more placements were made during the month under review than in September last year. Of the declines, those in logging and services were the most substantial, with somewhat smaller reductions under construction and maintenance, trade and manufacturing. Placements by industrial divisions included: manufacturing, 80; logging, 31; farming, 1,478; construction and maintenance, 175; trade, 151; and services, 1,756, of which 1,418 were of household workers. There were 1,374 men and 663 women placed in regular employment during the month.

Saskatchewan

There was a decrease of nearly 34 per cent in the number of workers required through Employment Offices in Saskatchewan during September, when compared with the preceding month and of nearly 32 per cent in comparison with the corresponding month of last year. Placements also were nearly 39 per cent less than in August and over 25 per cent less than in September, 1929. The only groups in which there were any gains in placements over September last year were construction and maintenance and mining. In the latter, the increase was nominal only, and in the former, attributable to work undertaken in relief of unemployment. Of the declines, those in farming and services were the most pronounced. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 141; farming, 2,584; transportation, 118; construction and maintenance, 633; trade, 134; and services, 978, of which 599 were of household workers. Positions in regular employment were secured for 3,114 men and 472 women.

Alberta

Employment opportunities, as indicated by orders received at Employment offices in Alberta during September, were nearly 40 per

cent better than in the preceding month, but nearly 11 per cent less favourable than during the corresponding month of last year. Placements also were over 40 per cent higher than in August, but a little over 1 per cent less than during September, 1929. Construction and maintenance and farming were the only groups in which more placements were made during the month under review than during the corresponding month of last year. Of the declines in other groups, which a little more than offset the gains mentioned above, those in services, trade and manufacturing were the largest. Placements by industrial divisions included: manufacturing, 153; farming, 4,175; transportation, 53; construction and maintenance, 1,298; trade, 105; and services, 822, of which 636 were of household workers. Placements in regular employment numbered 5,310 of men and 406 of women.

British Columbia

During the month of September, positions offered through British Columbia offices were over 17 per cent less than in the preceding month and 36 per cent fewer than during the corresponding month of last year. There was a decline also of nearly 18 per cent in placements when compared with August and of over 52 per cent in comparison with September, 1929. All industrial divisions participated in the declines in placements from September last year, those in farming and services being the most pronounced, although there were also considerable reductions under manufacturing, logging and construction and maintenance. Very few workers were despatched this year from British Columbia to harvest employment in the Prairie Provinces and this factor contributed largely to the decrease in placements in British Columbia during the month under review. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 443; logging, 79; farming, 404; transportation, 203; construction and maintenance, 510; trade, 134; and services, 1,007, of which 521 were of household workers. There were 1,030 men and 482 women placed in regular employment during the month.

Movement of Labour

During the month of September, 1930, the offices of the Employment Service of Canada made 21,100 placements in regular employment, 13,579 of which were of persons for whom the employment found was outside the immediate locality of the offices in which they were registered. Of the latter, 1,655 were granted the Employment Service reduced transportation rate, 1,397 travelling to points within the same province as the despatching office and 258 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of $4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The movement of labour from Quebec centres during September was of bush workers, 101 in number, of whom 37 went to employment within the province and 64 to points outside. Included in the provincial transfers were 30 bush workers going from Montreal and 7 from Quebec to districts within their respective zones. All certificates for points outside the province were secured at Hull, which office despatched 36 bushmen to Pembroke and 28 to Sudbury.

Ontario offices effected 276 transfers at the reduced rate in September, 267 provincial and 9 interprovincial. Provincially from Toronto 47 bushmen and 1 carpenter went to Sudbury, 20 construction labourers to Timmins, 10 hydro construction workers to Port Arthur, and 5 hydro construction labourers to Ottawa, while from Sudbury 94 bush workers were conveyed to employment within its own zone and 16 carpenters to Sault Ste. Marie. Securing certificates at Port Arthur 57 bushmen and 3 construction foremen journeyed to employment within the territory covered by that office. In addition, North Bay despatched 8 lumber peelers to Cobalt, and Pembroke 5 bridgemen and 1 labourer to Timmins. Of the transfers outside the province 8 were of railway construction labourers bound from Cobalt to Quebec and 1 was of a maid travelling from Kingston to Winnipeg.

The number of special transportation rate certificates granted by Manitoba offices during September was 152, of which 84 were issued to points within the province, and 68 to centres in other provinces. From Winnipeg the provincial movement included 1 farm hand, 1 farm general, 2 hotel employees and 1 sanitarium maid going to Brandon, 4 hotel employees to Dauphin, and 63 farm hands, 8 highway construction workers, 1 hotel employee, 1 electrician, and 1 power house operator to various points within the Winnipeg zone. The remaining provincial transfers was of a housekeeper despatched from Dauphin to a point within the same zone. The Winnipeg office was responsible for all the transfers outside the province, which included 20 bush-

men, 4 hotel employees, 1 farm hand, 2 town generals, and 1 tinsmith going to Port Arthur, 1 highway construction worker travelling to Estevan, 1 construction cook to Regina, and 35 farm hands and 3 farm household workers to employment in various Saskatchewan rural districts.

In Saskatchewan 268 persons took advantage of the Employment Service reduced transportation rate during September, 267 of whom were transported to provincial situations, and 1 to employment outside the province. The latter was a hotel domestic carried at the special rate from Regina to Toronto. Provincially the Regina office despatched 2 labourers and 2 domestics to Saskatoon, 1 hotel employee to Yorkton, 1 town domestic to Moose Jaw, and 3 highway construction teamsters within its own zone. From Saskatoon 17 highway construction workers were conveyed to North Battleford, 1 bushman to Prince Albert, and 1 hotel employee within the Saskatoon zone, while from Moose Jaw 4 highway construction workers went to Saskatoon and 1 miner and 1 town housekeeper to employment in the Moose Jaw zone. For employment within its own zone Prince Albert transferred 1 bushman. The balance of the provincial movement was of farm hands, 232 in number, who proceeded to provincial harvest areas, the greater volume of business being transacted through the Moose Jaw and Saskatoon offices.

The transfers from Alberta centres in September involved an issue of special rate certificates numbering 642, of which 529 were to provincial points and the remainder to other provinces. A heavy demand for harvest help featured the Alberta situation, the movement within the province comprising the transfer of 474 farm hands and 1 farm housekeeper from Edmonton, and of 10 farm hands and 1 farm housekeeper from Calgary to the rural localities of the province. In addition, Edmonton despatched 14 bush workers, 7 mill hands, 9 mine workers, 8 highway construction workers, 2 hotel employees and 1 maid to employment with its own zone, and Calgary 1 maid to Lethbridge and 1 waitress to Dauphin. Of the 113 workers who travelled outside the province 111 were farm hands for the Saskatchewan harvest fields who received their certificates for reduced transportation at Edmonton, while the 2 remaining were cooks sent from Calgary to Revelstoke.

Persons securing reduced rate certificates from offices in British Columbia during September were 216 in number, 213 of whom went to employment within the province, the balance representing an interprovincial movement. The majority of the provincial transfers were from Vancouver and included 14 cannery workers, 3 mine workers, 2 loggers, and 2 hotel employees going to Penticton, 74 cannery workers, 1 farm hand and 1 farm cook to Kamloops, 53 cannery workers and 5 fruit pickers to Kelowna, 29 mine workers to Nelson, 2 hydro linemen to Vernon, 2 fur farm workers to Prince George, and 9 bush workers, 2 hospital employees, 1 miner, 1 planer man, 3 construction workers, and 1 gardener to centres within the Vancouver zone. In addition Nelson transferred 2 loggers to Penticton and 1 teamster within its own zone. From Prince Rupert 2 miners and 1 carpenter were carried to centres within the district covered by that city office. The 3 persons going outside the province were construction workers for the Calgary zone, who received their certificates for reduced transportation at Vancouver.

Of the 1,655 workers who travelled at the Employment Service reduced transportation rate during September, 553 were conveyed by the Canadian National Railways, 1,073 by the Canadian Pacific Railway, 16 by the Temiskaming and Northern Ontario Railway, and 13 by the Pacific Great Eastern Railway.

In addition to the 2·7 cent rate referred to in the above, special harvest transportation facilities from British Columbia to the Prairie Provinces were afforded by the railway companies as in previous years, becoming effective on August 15th this year and terminating September 15th. Under this arrangement the railway companies granted a special harvest rate to all applicants upon presentation of a certificate supplied by the Employment Service. Such certificate holders were entitled to a fare of $11 from Victoria and $10 from Vancouver or other British Columbia points (with the exception of Cranbrook, Revelstoke and Nelson where the 2·7 cent per mile rate prevailed) to Calgary or Edmonton, beyond which points the fare was one-half cent per mile. Only 13 workers took advantage of this special rate, 10 from Vancouver and 3 from Victoria. The August transfers included 6 persons, 5 of whom were farm domestics and 1 a farm hand, all travelling to employment in Manitoba, while from September first to fifteenth 7 farm hands journeyed to Saskatchewan districts. Of the 13 persons who benefited by this special harvest rate 8 travelled by the Canadian National Railways and 5 by the Canadian Pacific Railway.

(4) Building Permits Issued in Canada During September, 1930

The value of the building permits issued by 61 cities during September stood at $11,081,706; this was a decrease of $2,736,039 or 19.8 per cent as compared with the total of $13,817,745 reported in August, and of $6,035,311 or 35.3 per cent in comparison with the aggregate of $17,117,017 recorded in September of last year. The cumulative total for the first nine months of this year was greater by 1.7 per cent than the average for the same period of the ten years, 1920-29, although it was exceeded by the aggregates for the years 1929, 1928 and 1927.

Some 50 cities furnished detailed statistics for September, showing that they had issued more than 1,100 permits for dwellings estiated to cost approximately $4,800,000, and nearly 3,000 permits for other buildings valued at over $6,000,000. During August, authority was granted for the erection of about 900 dwellings and 2,500 other buildings, estimated at approximately $4,000,000 and $9,800,000, respectively.

Alberta and British Columbia reported increases in the estimated value of building as compared with August, 1930, there being gains of 128.0 per cent and 28.0 per cent in those provinces, respectively. Of the declines in the remaining provinces, that of $1,906,192 or 33.0 per cent in Ontario was most pronounced.

As compared with September, 1929, there was a gain in Alberta, whose four cities showed an increase of $179,863 or 18.9 per cent. In the remaining provinces there were reductions, of which that of $3,294,460 or 46.0 per cent in Ontario was the largest.

Of the larger cities, Montreal registered lower totals of permits issued than in either the preceding month or the same month of last year. In Toronto and Vancouver there was an increase in the former, but a decrease in the latter comparison, while Winnipeg reported a gain over September, 1929, but a smaller total than in August, 1930. Of the other centres, Shawinigan Falls, Brantford, Owen Sound, St. Thomas, Sarnia, Welland, Regina, Calgary, Medicine Hat and Victoria showed increases in both comparisons.

The accompanying table gives the value of the building permits issued by 61 cities during August and September, 1930, and September, 1929. The 35 cities for which records are available since 1910 are marked with asterisks.

Cumulative record for first nine months, 1930.—The following table gives the value of the building authorized by 61 cities during September, and in the first nine months of each year since 1920, as well as index numbers for the latter, based upon the total for the corresponding period of 1920 as 100. The average index numbers of wholesale prices of building materials in the first nine months of the years since 1920 are also given (average 1926=100).

The aggregate for the first nine months of this year was 33.4 per cent lower than in 1929, the previous high level of the record, but was $2,049,561, or 1.7 per cent, higher than the ten-year average of $121,794,878, while the average index numbers of wholesale prices of building materials continued lower than in any other year of the record.

Year	Value of permits issued in September	Value of permits issued in first nine months	Indexes of value of permits issued first nine months (1920=100)	Average indexes of wholesale prices of building materials in first nine months (Average 1926=100)

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JULY TO SEPTEMBER, 1930

THE business of the offices of the Employment Service of Canada during the third quarter of 1930 declined considerably in volume from that transacted during the corresponding quarter of last year, as there was a decrease of 29 per cent in opportunities for employment and of nearly 28 per cent in placements in regular and casual employment. All industrial groups showed declines in both instances, the greatest losses occurring in farming, manufacturing, logging and services, though substantial declines were reported in other groups as well. All provinces also showed decreased vacancies and placements, the largest losses being in Ontario, where a heavy decline showed in manufacturing and logging, and in British Columbia, where fewer transfers-out of harvest hands to the Prairie Provinces made up the major part of the decline recorded provincially. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces from July to September, 1930.

From the chart on page 1315 which accompanies the article on the work of the employment offices for the month of September, it will be noted that the trend of the curves of vacancies and placements in relation to applications showed little variation during the month of July, but followed an upward course during August, which was succeeded by a marked decline during September, the level of the curve of vacancies at the close of September, being 26 points below that of September a year ago, and the level of placements nearly 19 points lower than that of the corresponding period last year. During the period July to September, 1929, there was an average of 85·3 vacancies and 79·0 placements for each 100 applications for employment, as compared with 64·9 vacancies and 61·6 placements for each 100 applications during the period under review.

The average number of positions offered daily during the present quarter was 1,278, of applicants registered, 1,971, and of placements effected, 1,214, in contrast with a daily average of 1,806 vacancies, 2,118 applications and 1,673 placements in regular and casual employment during the corresponding quarter of 1929.

During the three months, July to September, 1930, the offices reported that they had made 96,914 references of persons to positions and effected a total of 93,453 placements, of which 61,904 were in regular employment and 31,549 in casual work. Of the placements in regular employment, 48,834 were of men and 13,070 of women, while casual work was found for 19,585 men and 11,964 women. Comparison with the corresponding period of 1929, showed that 128,816 placements were then made, of which 92,650 were in regular employment and 36,166 in casual work. Applications for employment during the period under review were received from 111,927 men and 39,788 women, a total of 151,715, in contrast with a registration of 163,021 persons during the same period in 1929. Employers notified the Service during the quarter July to September, 1930, of 98,390 vacancies, of which 70,229 were for men and 28,161 for women, as compared with 139,025 opportunities for work during the corresponding period a year ago.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary, showing the employment situation during September is reproduced below. The following report on employment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment in selected manufacturing industries throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labor, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for October, 1930, and previous months are reproduced below.

Great Britain

Employment continued to decline in September. There was a further seasonal increase in the numbers unemployed in the building industry; in brick, tile, artificial stone and cement manufacture; in the clothing, transport and distributive trades; and in hotel and boarding-house service. Unemployment also increased in the chemical, iron and steel (other than pig iron), engineering and shipbuilding industries, and in the paper, silk and artificial silk and jute trades.

There was, however, some improvement in coal mining and in the cotton textile, pig-iron and motor vehicle industries.

Among the workpeople, numbering approximately 12,100,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at September 22, 1930 (including those temporarily stopped as well as those wholly unemployed) was 18·1, as compared with 17·5 at August 25, 1930, and with 10·0 at September 23, 1929. The percentage wholly unemployed at September 22, 1930, was 13·1, as compared with 12·4 at August 25, 1930; while the percentage temporarily stopped was 5·0, as compared with 5·1. For males alone the percentage at September 22, 1930, was 18·3, and for females 17·5; at August 25, 1930, the corresponding percentages were 17·7 and 17·2.

At September 22, 1930, the numbers of persons on the registers of Employment Exchanges in Great Britain were 1,413,242 wholly unemployed, 596,773 temporarily stopped, and 99,643 normally in casual employment, making a total of 2,109,658. This was 69,956 more than a month before, and 946,718 more than a year before. The total included 1,495,631 men, 60,041 boys, 500,664 women, and 53,322 girls.

The 1,413,242 wholly unemployed included approximately 942,000 insured persons who had paid at least 30 contributions during the preceding two years and therefore satisfied the full contributions condition for the receipt of unemployment benefit; 385,000 insured persons who had paid less than 30 contributions during the preceding two years; and 86,200 uninsured persons. The wholly unemployed claimants for benefit, numbering 1,276,090, included 229,789 men, 5,603 boys, 49,098 women, and 3,026 girls who had been on the Register for less than one month.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at September 22, 1930, was 2,178,551. At September 29, the total was 2,230,138.

United States

Employment in the United States increased 1 per cent in September, 1930, as compared with August, 1930, and pay-roll totals increased 1·4 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

A separate summary is made of the latest data available relating to all employees, exclusive of executive and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of June and July, 1930, and therefore cannot be included in the general statement for the month of September. The number of employees of Class I railroads as at July 15, totalled 1,515,142, representing a decrease of 2·1 per cent since June 15, 1930. The amount of pay-roll in the entire month of July was $209,929,143, representing a decrease over the previous month of 0·1 per cent.

Employment in manufacturing industries decreased 0·3 per cent in September as compared with August, while pay-roll totals increased 0·4 per cent. These changes are based

upon returns made by 13,074 establishments in 54 of the chief manufacturing industries in the United States. These establishments in September had 2,929,079 employees whose combined earnings in one week were $72,258,-248.

The bureau's weighted index of employment for September, 1930, is 79·7, as compared with 79·9 for August, 1930, 81·6 for July, 1930, and 99·3 for September, 1929; the index of pay-roll totals for September, 1930, is 74·2, as compared with 73·9 for August, 1930, 75·9 for July, 1930, and 102·6 for September, 1929. The monthly average for 1926 equals 100.

Substantially increased employment was shown in September in the food, textile, chemical, and tobacco groups; among the decreases in the remaining 8 groups of manufacturing industries were drops of 3·2 per cent in lumber, 2·7 per cent in vehicles, and 1·4 per cent in the iron and steel group.

Twenty-four of the 54 separate manufacturing industries reported increased employment in September, the notable gains having been such seasonal ones as 21 per cent in confectionery, 20·5 per cent in fertilizers, 12·3 per cent in women's clothing, 6·9 per cent in millinery, and 5·6 per cent in hosiery. Other outstanding gains were 2·2 per cent in cotton goods, 7·6 per cent in machine tools, 3·5 per cent in glass, 4·6 per cent in cigars, 9·9 per cent in pianos, 1·1 per cent in agricultural implements, and 0·3 per cent in electrical machinery.

Outstanding decreases in employment in September were 9 per cent in ice cream, 4·1 per cent in sawmills, 5·7 per cent in millwork, 3·9 per cent in automobiles, 5·2 per cent in tires, 3·1 per cent in carpets, 2·3 per cent in silk, 3·2 per cent in petroleum refining, 3·5 per cent in cement, 2 per cent in brick, and 2·3 per cent in the iron and steel industry.

Rayon alone of the six industries, for which data are not yet included in the bureau's indexes, showed decreased employment (1·1 per cent) in September. The increases in the remaining 5 industries were: 25·8 per cent in radio, 1·7 per cent in aircraft, 4·4 per cent in jewelry, 2·6 per cent in paint and varnish, and 1·1 per cent in miscellaneous rubber goods.

The New England, Middle Atlantic, and South Atlantic geographic divisions had more employees in September than in August, while the remaining six divisions reported fewer employees in September.

Unemployment percentage.—Unemployment statistics which are being compiled each month by the American Federation of Labour, indicate the percentage of unemployed union members in twenty-four representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent; October, 1929, 11 per cent; November, 1929, 12 per cent; December, 1929, 16 per cent; January, 1930, 20 per cent; February, 1930, 22 per cent; March, 1930, 21 per cent; April, 1930, 21 per cent; May, 1930, 20 per cent; June, 1930, 20 per cent; July, 1930, 22 per cent; August, 1930, 22 per cent; September, 1930, 21 per cent; October, 1930, 21 per cent.

Unemployment and Hours of Work in Germany

The present economic depression in Germany has given rise to severe unemployment, which shows signs of increasing. In order to avoid the dismissal of large numbers of workers, the workers' organizations have asked for a reduction of hours of labour and especially for the abolition of overtime. They have succeeded in concluding an agreement with the railway administration for this purpose and have decided to terminate on December 1 the agreement relating to overtime in the Ruhr mines.

As regards railways, the hours of labour of maintenance workers will be reduced from nine to eight in the day for the last quarter of 1930. During the same period hours in the repair shops will be 40 in the week. Although these restrictions increase the difficulties of management, the railway company has agreed to carry them out in the interests of the staff and in order to avoid increasing unemployment. At the end of the year it will examine in concert with the workers' unions the measures to be taken if further reductions of staff become necessary.

In the Ruhr mining industry, the miners' association are asking for the introduction of the seven-hour day for underground workers in place of the eight-hour day, consisting of

seven hours plus one hour overtime, which is at present in force.

Statements communicated to the press by the employers show that if present wages are to be maintained further restrictions will be inevitable. Production would then have to be concentrated in those undertakings which are relatively the best organized, while the less paying ones would have to close down. It is estimated that such a measure would involve the dismissal of a further 50,000 miners, and if these are added to the 68,000 workers already discharged, the total number of workers employed in the Ruhr district would fall to 270,000, as compared with 402,000 in 1913.

Protection of Migrants

The seventh session of the Permanent Conference for the Protection of Migrants was held in Geneva on September 11 and 12, 1930. Some 50 delegates from 44 associations in Austria, Belgium, Canada, France, Germany, Great Britain, Italy, Japan, Poland, Spain, Switzerland and the United States took part in the proceedings, which were presided over by Mr. S. Cohen. The Conference decided to continue its inquiry into the measures to be taken to ensure the maintenance of families left by emigrants in their countries of origin and to facilitate the payment of allowances made by emigrants for that purpose.

The Conference had submitted a report and a number of suggestions made by its experts to the Permanent Migration Committee at the beginning of 1930 with regard to methods of recruiting and finding employment for migrant workers. This report will be completed by a further study of the measure affecting migrants' families, the application of contracts of employment and the position of the protective associations. The Conference recommended the adoption as soon as possible of a scheme of compulsory insurance of migrants, based on an international Convention, which would cover all accidents occurring during the voyage, without prejudice to the rights of emigrants and their dependants in the event of a subsequent law suit. A special committee will carry out the necessary negotiations and submit definite proposals to the Conference in 1931.

The Conference decided to place on the agenda of next year's meeting a number of questions, including the protection on the return journey of migrants disembarking without means and equality of treatment as regards social insurance.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30 last. The text of this measure appeared in the April issue at page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(*a*) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(*b*) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

Section 5 of the Fair Wages and Eight-Hour Day Act authorized the Governor in Council, on the recommendation of the Minister of Labour, to make necessary regulations under the Statute. Those regulations have not yet been made. The Act, however, was

put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

The Fair Wages Policy of the Government of Canada, which has been in effect since 1900 and is now expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924, requires that all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, drydocks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of the transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen, in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time, rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment

may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are especially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wages schedules as shown below, or the general fair wages clause above mentioned:—

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Supply and installation of hangar doors and operators for the hangar at the Royal Canadian Air Force Training Establishment, Trenton, Ont. Name of contractors, The Mis-Can-Ada Mfg. Co., Ltd., Ottawa. Date of contract, October 4, 1930. Amount of contract, $9,600. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
		per day
Bricklayers	$1 00	8
Bricklayers' labourers	0 50	8
Masons	1 10	8
Masons' labourers	0 50	8
Plasterers	1 10	8
Plumbers	0 70	8
Carpenters	0 80	8
Electricians	0 70	8
Painters and glaziers	0 70	8
Concrete labourers	0 40	8
Ordinary labourers	0 40	8
Sheet metal workers	0 70	8
Roofers—Felt and gravel	0 50	8
Roofers—Sheet metal	0 70	8
Driver—2 horses and wagon	0 75	8
Structural ironworkers	1 00	8

N.B.—Overtime may be permitted in case of necessity on the basis of time-and-one-half.

Exceptions to the 8 hour day and overtime provisions will be recognized in preparatory and complementary work.

Supply and installation of hangar doors and operators for the hangar at the Royal Canadian Air Force Training Establishment, Trenton, Ont. Name of contractors, The Richards Wilcox Canadian Co., London, Ont. Date of contract, October 4, 1930. Amount of contract, $8,717.35. The same fair wages schedule was inserted in this contract as in the one preceding.

Supply and installation of hangar doors and operators for the hangar at the Royal Canadian Air Force Training Establishment, Trenton, Ont. Name of contractors, The Truscon Steel Co. of Canada, Ltd., Montreal. Amount of contract, $8,669. The above-mentioned fair wages schedule was inserted in this contract.

Surfacing and grading, Rockliffe Aerodrome, Rockcliffe, Ont. Name of contractors, McCuaig & Corkery, Ottawa, Ont. Date of contract, October 28, 1930. Amount of contract, $7,200. The fair wages schedule for the main work at the aerodrome was inserted in this contract also, as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Bricklayers and masons	$1 25	8
Plasterers	1 00	8
Plumbers	1 00	8
Carpenters	0 90	8
Electricians	0 80	8
Painters and glaziers	0 70	8
Concrete labourers	0 45	8
Ordinary labourers	0 45	8
Driver, team and wagon	1 00	8
Driver, horse and cart	0 70	8
Structural iron worker	0 90	8

Overtime may be permitted in case of necessity on the basis of time and one-half.

Exceptions to the 8-hour day and overtime provisions will be recognized in preparatory and complementary work.

Construction of a Markers' Shelter, "C" Range, Long Branch Rifle Range, Long Branch, Ontario (Port Credit). Name of contractors, The Russell Construction Co., Toronto, Ont. Date of contract, October 28, 1930. Amount of contract, $7,645. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
		per day
Bricklayers and masons	$1 35	8
Carpenters	1 10	8
Electricians	1 25	8
Painters	0 85	8
Cement finishers	0 75	8
Labourers, common	0 50	8
Driver, team and wagon	1 10	8
Driver, horse and cart	0 80	8

Installation of forced hot water heating system, Sherbrooke Regiment Armoury, Sherbrooke, P.Q. Name of contractor, O. A. Cloutier, Sherbrooke, P.Q. Date of contract, October 29, 1930. Amount of contract, $3,825. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Steamfitters	$0 70	8
Carpenters	0 60	8
Painters	0 60	8
Concrete workers	0 40	8
Electrical workers	0 65	8
Labourers	0 35	8
	per day	
Drivers, horse and cart	5 50	8
Drivers, team and wagon	7 50	8

Department of Public Works

Contracts in Group "A" (Construction, etc.)

Installation of engines and equipment for Inspection Boat *Walronda* at Victoria, B.C. Name of contractor, B.C. Equipment Co., Ltd., Vancouver, B.C. Date of contract, October 6, 1930. Amount of contract, $6,436. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Ships' carpenters	$0 84⅜	8
Machinists	0 82	8
Machinists' helpers	0 53	8
Pipefitters	1 00	8
Pipefitters' helpers	0 62½	8
Electricians	0 75	8
Electricians' helpers	0 51	8

Construction of 200 feet of the North Pier at Kincardine, Ont. Name of contractors, Messrs. Henry & Ross, Kincardine, Ont. Date of contract, October 2, 1930. Amount of contract, approximately $27,606.09. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less	Hours of labour Not more
	per hour	per day
Hoist engineer	$0 75	8
Pile driver engineer	0 75	8
Carpenters	0 75	8
Blacksmiths	0 65	8
Diver	1 00	8
Labourers	0 45	8
	per day	
Driver, horse and cart	5 00	8
Driver, team and wagon	6 50	8

Construction of a wharf at Stuarttown, Charlotte Co., N.B. Name of contractor, Mr. J. S. Parker, Saint John, N.B. Date of con-

tract, October 7, 1930. Amount of contract, approximately $18,162. A fair wages schedule was inserted in the contract as follows:

Trade or Class of Labour	Rates of wages Not less	Hours of labour Not more	
	per hour	per day	per week
Carpenters	$0 60	8	48
Blacksmith	0 60	8	48
Labourers	0 35	8	48
	per day		
Driver, horse and cart	4 50	8	48
Driver, team and wagon	6 50	8	48

Construction of a wharf at Coal Harbour, Comox-Alberni District, B.C. Name of contractors, James McDonald Construction Co., Ltd., Victoria, B.C. Date of contract, September 25, 1930. Amount of contract, approximately $7,370.56. A fair wages schedule was inserted in the contract as folows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Pile driver engineer	$1 12½	8
Pile driver foreman	1 25	8
Pile driverman	1 00	8
Pile driver boomman	1 00	8
Bridgeman	1 00	8
Fireman	0 68¾	8
Labourers	0 50	8

Re-surfacing wharf approach at Sault Ste. Marie, Ont. Name of contractors, Messrs. Bernardi & Brown, Sault Ste. Marie, Ont. Date of contract, Oct. 7, 1930. Amount of contract, approximately $6,749.63. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Labourers	$0 45	8
Blacksmiths	0 65	8
Concrete finishers	0 60	8
Concrete mixer operator	0 65	8
	per day	
Driver—Horse and cart	5 00	8
Driver—2 horses and wagon	6 50	8
	per hour	
Motor truck driver	0 50	8
Carpenters	0 85	8

Construction of a public breakwater at Lloyd's Cove, Sydney Mines, N.S. Name of contractor, Mr. Hector McNeil, Sydney Mines, N.S. Date of contract, October 29, 1930. Amount of contract, approximately $9,560. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than	
	per hour	per day	per week
Carpenters	$0 75	8	48
Labourers	0 35	8	48
Blacksmiths	0 60	8	48
Wharfmen	0 65	8	48
Timbermen	0 50	8	48
	per day		
Driver, horse and cart	4 50	8	48
Driver, team and wagon	6 50	8	48

Construction of an addition and alterations to the public building at Kentville, N.S. Name of contractors, M. A. Condon & Son, Kentville, N.S. Date of contract, October 20, 1930. Amount of contract, $16,660 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than	
	per hour	per day	per week
Concrete workers	$0 35	8	48
Concrete mixers	0 40	8	48
Concrete floaters	0 45	8	48
Concrete finishers	0 60	8	48
Stone masons	0 80	8	48
Stone cutters	0 80	8	48
Brick and hollow tile layers	1 00	8	48
Structural steel workers	0 75	8	48
Sheet metal workers	0 55	8	48
Helpers	0 35	8	48
Felt and gravel roofers	0 55	8	48
Terrazzo layers	1 00	8	48
Carpenters	0 65	8	48
Painters	0 60	8	48
Glaziers	0 60	8	48
Helpers	0 40	8	48
Marble and tile setters	1 00	8	48
Metal lathers	0 65	8	48
Plasterers	1 00	8	48
Helpers	0 40	8	48
Plumbers	0 60	8	48
Helpers	0 40	8	48
Steamfitters	0 60	8	48
Helpers	0 40	8	48
Electricians	0 65	8	48
Helpers	0 40	8	48
Labourers	0 35	8	48
	per day		
Driver, horse and cart	4 50	8	48
Driver, team and wagon	6 50	8	48
Motor truck driver—	per week		
1 ton	22 00	8	48
2 ton	28 00	8	48

Construction of repairs to the breakwater at Port Elgin, Ont. Name of contractors, Messrs. Wm. Bermingham & Son, Kingston, Ont. Date of contract, October 25, 1930. Amount of contract, approximately $16,511. A fair wages schedule was inserted in the contract as follows:—

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Printing and Publishing

OTTAWA, ONTARIO.—OTTAWA NEWSPAPER PUBLISHERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 102.

Agreement to be in effect from October 1, 1929, to September 30, 1931, and for such time thereafter (not exceeding thirty days) as may be required for the negotiation of a new agreement.

This agreement is the same as the one previously in effect and summarized in the LABOUR GAZETTE, April, 1927, page 442, and amended as noted in issue for November, 1928, page 1262, with the following changes:

Wages for assistant foremen, compositors, make-ups, operators, copy-cutters, bankmen, typecasters, machinists and machine tenders: $44 per week for work on evening newspapers and $46.50 per week for work on morning newspapers.

Wages for apprentices: first six months of third year $15.35 per week, second six months $16.35, first six months of fourth year $19.40, second six months $20.50, first six months of fifth year $22.50, second six months $23.50. Apprentices working at night to be paid $1 per week extra.

Construction: Buildings and Structures

THREE RIVERS, QUEBEC.—A CERTAIN CONTRACTOR AND THE NATIONAL CATHOLIC UNIONS OF CONSTRUCTION WORKERS.

All sub-contractors are also to conform to the terms of this agreement.

This agreement covers the conditions of work on one contract and is to be in effect from May 1, 1930, to April 30, 1931, in so far as the wage scale is concerned and to the end of the contract in so far as the working conditions are concerned.

Only members of the National Catholic Unions are to be employed, or those competent workmen who will join the union. The business agent may visit the job.

Workmen and foremen who reside in Three Rivers will be employed, if available.

Hours: the hours will be those accepted by each individual union.

Overtime: time and one-half from 6 p.m. to midnight and double time from midnight to 7 a.m. No work on Sundays, Church holy days, St. Jean Baptiste Day or Labour Day.

Wages per hour: carpenters 50 cents, bricklayers and masons $1, plasterers $1, labourers 35 cents, painters 50 cents, stationary engineers 50 cents, blacksmiths 50 cents, hod carriers 45 cents, driver with one horse 60 cents, driver with two horses 80 cents.

Any dispute between the parties will be settled by conciliation and arbitration.

MONTREAL, QUEBEC.—CERTAIN CONTRACTORS AND THE INTERNATIONAL UNION OF BRICKLAYERS, MASONS AND PLASTERERS, LOCAL NO. 4.

Verbal agreement to be in effect from May 12, 1930, to May 11, 1931.

Hours: 8 per day, 4 on Saturdays.

Overtime: time and one-half; Sundays and holidays, double time. Wages for bricklayers, marble masons and stone masons: $1.20 per hour.

VANCOUVER, B.C.—WAGE SCALE AND WORKING RULES OF THE INTERNATIONAL UNION OF OPERATING ENGINEERS, LOCAL NO. 844.

These working rules and wage scale are to be in effect from May 1, 1930, subject to change at 30 days' notice, and are similar to those previously in effect and summarized in the LABOUR GAZETTE for September, 1928, page 1014, with the following exceptions:

Union firemen must be employed with union engineers, where firemen are required. Where fireman is not employed, engineer to be paid extra time for tying up machine. Members of this local union must not break in men as operators who are not members of the union, under penalty of a fine.

Wages per day: Bagley scraper $9, derricks $9, road roller $8, oilers on power shovels $5.50. Other classes are the same as in the previous wage scale.

Construction: Miscellaneous

VANCOUVER, B.C. AND DISTRICT.—TRADE RULES OF THE INTERNATIONAL UNION OF OPERATING ENGINEERS, LOCAL NO. 46A.

This local union is a subdivision of Local 46 which covers steam shovel and dredgemen in all Canada from Fort William westward, with headquarters at Edmonton, Alberta. The members of this local union are operators of excavating machinery, viz., steam shovels, gas shovels, drag lines, steam ditchers, clam shells, etc.

These trade rules were in effect during 1929, and have been continued during 1930 without change.

Hours and overtime: for work within a radius of 25 miles of Vancouver, 8 per day, 4 on Saturdays with all overtime and work on Sundays and holidays at double time. For men on monthly scale, 8 hours or fraction thereof to constitute a day's work with time and one-half for overtime except when moving machinery or digging on Sunday or a holiday which will be paid at double time.

Daily wage scale (to apply within a radius of 25 miles of the City of Vancouver): engineers $10, cranesmen $8, firemen and oilers $6.50; for operating a machine in tunnels the scale will be $1 per day over the regular scale. Monthly wage scale: engineers $250, cranesmen $200, firemen and oilers $160, and for operating a machine in tunnels $25 per month over regular scale will be paid.

Seven holidays will be observed and will apply to men both on monthly and daily rates.

Transportation to and from jobs out of city will be paid by employer and travelling time up to 8 hours in one day.

Transportation and Public Utilities: Street and Electric Railways

BRANDON, MANITOBA.—SCHEDULE OF WAGES AND WORKING CONDITIONS FOR EMPLOYEES OF THE CITY OF BRANDON.

Employees of the Street Railway Department of the City are included in the civic schedule summarized below under the heading: Service: Public Administration.

Transportation and Public Utilities: Water Transportation

PRINCE RUPERT, B.C.—SCHEDULE OF WAGES AND WORKING CONDITIONS OF THE CANADIAN LONGSHOREMEN'S ASSOCIATION, LOCAL NO. 2.

This schedule has been in effect since 1927, by verbal agreement and will continue in effect subject to thirty days' notice by either party.

Coast-wise Work

The union will endeavour to supply all help required, but if unable to do so, the employer may obtain men wherever available.

Hours: 8 per day between 8 a.m. and 5 p.m.

Overtime: all time before 8 a.m. and after 5 p.m. and meal hours worked will be considered overtime.

Men hired for night work and reporting for duty between 5 p.m. and midnight will be paid at least two hours' pay at regular rate; after midnight up to 6 a.m. they will be paid for at least four hours' work. If kept waiting longer they will be paid at regular rates for time they are so kept.

Wages per hour: general longshore work 80 cents in day time and $1 for overtime; coal and ore in bulk 90 cents in day time and $1.05 for overtime; cement in lots of over 25 tons and fertilizer and plaster in lots of over 25 tons $1.05 straight time; explosive powders $1 straight time; sulphur in bulk $1.15 straight time, creosoted lumber and piles $1.10 straight time, double winch drivers $1 in day time and $1.35 for overtime.

Deep Sea and Off Shore Work

The employer or his agent reserves the right at all times of picking his own employees.

Hours: 8 per day between 8 a.m. and 5 p.m. except Sundays and holidays.

Wages: for ship work, that is loading and unloading of vessels from slings to hold and from hold to slings and to and from scows, barges or open cars within reach of ship's tackle, the base wage is 84 cents per hour straight time and $1.26 overtime; for dock work, that is from sling to pile in the shed or piles direct or from the first pile in the shed or cars to slings direct, the base wage is 80 cents per hour straight time and $1.20 overtime.

An extra 10 cents per hour will be paid to the following (with the exception of truckers): double winch drivers, donkey drivers, men handling caustic soda, cement, green hides, animal fertilizers all in lots of 25 tons or over, lime in sacks only, sulphur, coal, coke or ore, ballast and grain in bulk and to all men employed in loading ship only, in sacks weighing 125 pounds or over (truckers excepted) also to men handling creosoted lumber, men working on lumber and piles from the water and to hatchtenders and siderunners working with lumber, to men working in refrigerators or below decks in connection with refrigerators when cargo is being discharged from or loaded into ships' refrigerators when the chambers contain commodities for the reason of preservation.

An extra 20 cents per hour will be paid to double winch drivers, hatchtenders, side runners, boom men and sling men when working on submerged lumber and piles, hatchtenders and side runners on creosoted products.

In the case of handling high explosives $1.20 per hour straight time and $1.80 overtime for dock work and $1.26 per hour straight time and $1.89 overtime for ship work.

Where the cargo of the vessel either in whole or in part is badly damaged through fire, collision, springing a leak or stranding, the rate is $1.20 per hour straight time and $1.89 per hour overtime for ship work.

When a vessel strands at an outside point and gets into such a condition that she cannot reach port without discharging or shifting cargo, the men so employed will be paid $1.57 per hour while working and at the rate of 78 cents per hour for travelling time and time standing by. They will also be provided with free meals when they are not permitted to go ashore.

Transportation and Public Utilities: Local Transportation

Calgary, Alberta.—A Certain Milk Company and the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, Local No. 528.

Agreement to be in effect from May 1, 1930, until changed by agreement. If either party gives 30 days' notice before November 1, in any year, any clauses may be brought up for reconsideration.

The company will employ union members or those who will become members within 15 days.

Three days off per month will be allowed all union members.

One week's vacation with pay will be given each summer to all employees who have completed one year's service on or before the previous November 1.

Wage schedule: milk wagon drivers on outside routes $100 per month, milk wagon drivers on inside routes $92 per month and one half of one per cent commission to be paid on loads of over 5,000 quarts; helpers on milk wagons $2.50 per day, spare route men $125 per month, truck drivers $125 per month, stablemen $110; inside workers from $100 to $120 per month, cold storage men, bottlers and can washers $120, bottle washers and inside spare men $110.

When a route is split, the driver whose route was divided will have first choice of the two routes and will receive full pay for the following three months, based on his average sales for four weeks previous to the division of the route.

The company will assume all bona fide credits up to $40.

Drivers will be allowed to drive in, unload their returns and settle their accounts as soon as their routes are properly finished, drivers to have the right of way as far as possible.

The employees will have the right to discuss any subject or present any grievance to the proper officials of the company. Any employee suspended or discharged upon ground which after investigation is found to be insufficient, will be reinstated and be paid for time lost.

No boys or unauthorized persons will be permitted to serve customers or ride wagons.

One week's notice of resignation or of discharge to be given except in case of certain causes of discharge.

Service: Public Administration

Port Arthur, Ontario.—Public Utilities Commission of the City of Port Arthur and the International Brotherhood of Electrical Workers, Local No. 339 and all other Employees of the Electric Light and Telephone Departments of the City of Port Arthur.

Agreement to be in effect from May 1, 1929, to May 1, 1931.

No discrimination to be shown any employee on account of his connection with any association; the employees in the association will not interfere with nor limit the rights of the Commission. Promotions to foreman or wire chief will be granted employees in accordance with seniority and efficiency whenever possible, and no discrimination will be made on account of union membership, but immediately after such promotion, membership in any association will be discontinued.

Hours: 8 per day from 8 a.m. to 12 noon and from 1 p.m. to 5 p.m. on other days and from 8 a.m. to 12 noon on Saturdays, a 44-hour week. If necessary, however, one man in each department may work from 1 p.m. to 5 p.m. and from 7 p.m. to 11 p.m. six days a week at straight time and one man in each department may work on Saturday afternoons from 1 p.m. to 5 p.m. at straight time.

Overtime: overtime up to midnight and work on Saturday afternoons with the exceptions noted above will be paid at time and one half; all other overtime including work on Sundays and holidays, double time. Men on monthly salary will be paid overtime in any work other than the City's.

All employees working on a monthly salary will receive two weeks' holidays with pay each year.

Wages per hour: sub-foremen 90 cents, first class linemen 88 cents, second class linemen 65 to 81 cents, groundmen 50 to 68½ cents, cable splicer 93½ cents, cable splicer's helper 65 to 81 cents.

For work out of town, transportation and living expenses will be paid.

Two men must be assigned to work on high voltage wires. All linemen's helpers and groundmen must be able to speak and understand English. The Commission will supply rubber boots, coats and rubber gloves when necessary as well as protection shields for covering live wires and each employee will use these protective devices. Instruction in first aid and resuscitation methods is also arranged for all employees.

The Commission will be willing to interview employees or any committee of them on any subject concerning the mutual benefit of the employees and the commission in its relation to the general public.

Brandon, Manitoba.—Schedule of Wages and Working Conditions for Employees of the City of Brandon.

This schedule which was signed by officials of the city and by officers of the Civic Employees Federal Union, Local No. 69, will be in effect from March 1, 1930, to March 1, 1931.

General

No civic employee will be discriminated against by reason of his being a member of a trade union.

Promotions will be made in accordance with seniority and efficiency as far as possible. In employing new men or making promotions, other things being equal, preference will be given to resident married men with families, then to resident married men without families, then to resident single men, with returned men being given the preference when possible. All regular civic employees must be British subjects.

All employees will be given one week's holiday and statutory holidays with pay after one year's service, except employees of the Street Railway Department who will be allowed an additional week's holiday in place of statutory holidays.

Wages: labourers 35 cents per hour, long service labourers 40 cents per hour.

Overtime: time and one-half for all overtime including Sundays, except holiday duty of employees of the Health Department which will be paid at the regular rate.

The City Manager will receive a grievance committee from the Civic Employees' union and give due consideration to any grievance so presented.

Street Railway Department

Hours: 9 per day.

Uniforms to be supplied to motormen.

Wages per hour: motormen—first six months 45 cents, second six months 47 cents, third six months and thereafter 50 cents, special conductors 35 cents; armature winders 75 cents, machinists 70 cents, electricians' helpers 50 cents, linemen 50 cents, sweeper operators 50 cents, car barn foremen 48 cents, track foremen 48 cents, repairmen 48 cents, pitmen, oilers and greasers 45 cents, line groundmen 45 cents, cleaners, lamp renewers and switch tenders 43 cents, experienced trackmen 43 cents.

Waterworks Pumping Station

Hours: 10 per day, 6 days a week, except engineers and firemen who work in 8-hour shifts with a 6 day week. Labourers will work on Sundays, when necessary, at regular pay. Engineers to be governed by the engineers' union.

Wages: engineers $170 per month, firemen $110 per month, machinists 50 cents per hour, boiler washers 43 cents per hour.

Works Department

Hours: 9 per day from November 16 to February 28, and 10 per day from March 1, to November 15.

Wages: assistant foreman 55 cents per hour, special labourers 50 cents, intermediate labourers 45 cents, teamsters 43 cents, light truck driver $100 per month, weighmaster $100 per month.

Health Department

Hours: 9 per day from November 16, to February 28, and 10 per day from March 1, to November 15, with one-half hour extra per day allowed teamsters for stable duty. Sunday stable men to be allowed five hours for same at regular pay. Employees of this department will not lose any time through inclement weather.

Wages: foremen and horsekeeper $112 per month with cottage, water and light free, heavy truck driver $112 per month, night soil men 45 cents per hour, teamsters and helpers 40 cents per hour.

The International Labour Office has just published in one volume the texts of the Draft Conventions and Recommendations adopted by the International Labour Conference at its fourteen sessions from 1919 to 1930. The documents are reprinted from the authentic texts, deposited with the Secretary-General of the League of Nations. A footnote to each Convention gives the date upon which it came into force, and the names of the states which had ratified the Convention on October 1, 1930. The volume is completed by a subject index.

The International Labour Office has also issued recently the text of the questionnaire which is being addressed to the Governments of the States Members of the International Labour Organization on the subject of hours of work in coal mines, with a view to the drafting of a Convention for discussion at the fifteenth session of the International Labour Conference, to be held in May, 1931.

The British Prime Minister, in an address on November 14, announced that his government intended to eliminate the "dole" feature of unemployment insurance and to restore the system to a strictly insurance basis. A similar plan to place unemployment insurance in Germany on a self-supporting basis is noted on page 1237.

Between 700 and 800 labourers were reported to be employed during October in the construction of a new fertilizer plant for the Consolidated Mining and Smelting Company at Trail, B.C., in addition to the various building tradesmen required for such work. In view of the unemployment situation that is expected when the company reduces its production for the season the municipality is taking steps to obtain assistance for road construction work under the provisions of the Unemployment Relief Act.

PRICES, RETAIL AND WHOLESALE, IN CANADA, OCTOBER, 1930

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during October was again downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower than in September.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was $10.32 at the beginning of October, as compared with $10.38 for September; $11.68 for October, 1929; $11.28 for October, 1928; $10.99 for October, 1927; $10.93 for October, 1926; $10.89 for October, 1925; $10.31 for October, 1924; $10.65 for October, 1923; $10.23 for October, 1922; $11.48 for October, 1921; $15.83 for October, 1920; $16.92 for June, 1920 (the peak); $13.54 for October, 1918; and $7.99 for October, 1914. The most important declines occurred in the prices of beef, mutton, cheese, bread, flour, rolled oats, prunes and potatoes, while seasonable advances occurred in the prices of eggs, butter and evaporated apples. Including the cost of fuel and rent with that of foods the total budget averaged $20.68 at the beginning of October, as compared with $20.75 for September; $21.96 for October, 1929; $21.52 for October, 1928; $21.18 for October, 1927; $21.14 for October, 1926; $21.11 for October, 1925; $20.67 for October, 1924; $21.16 for October, 1923; $20.87 for October, 1922; $22.01 for October, 1921; $26.46 for October, 1920; $26.92 for July, 1920 (the peak); $21.48 for October, 1918; and $14.48 for October, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was again lower, being 81.4 for October, as compared with 82.5 for September; 96.7 for October, 1929; 95.2 for October, 1928; 97.2 for October, 1927; and 98.1 for October, 1926. One hundred and thirty-seven prices quotations declined, fifty-one advanced and three hundred and fourteen were unchanged.

In the grouping according to chief component materials six of the eight main groups were lower, one was higher and one was unchanged. The groups which declined were: the Vegetable and Vegetable Products group, because of lower prices for grains, flour and raw rubber; the Fibres, Textiles and Textile Products group, due mainly to lower prices for raw silk, raw cotton, certain cotton fabrics and raw wool; the Wood, Wood Products and Paper group, due to lower prices for sulphite pulp and certain lines of lumber; the Iron and its Products group, mainly because of reduced quotations for pig iron, steel billets and tin plate; the Non-Ferrous Metals and their Products group, due to lower quotations for electrolytic copper, copper wire bars, lead, zinc and silver; and the Chemicals and Allied Products group, because of lower prices for hemlock extract, shellac and carbon black. The Animals and their Products group was considerably higher, because of increased prices for canned fish, eggs, butter, milk, steers and calves, which more than offset lower prices for hogs, hides and sole leather. The Non-Metallic Minerals group was unchanged.

In the grouping according to purpose consumers' goods were slightly higher while producers' goods declined substantially. In the former group higher prices for milk, butter and eggs more than offset lower prices for coffee, flour, bread, cottonades and denims, while in the latter group the decline was due to lower prices for woodpulp, raw cotton, raw silk, raw wool, hides, pig iron, copper, tin, silver, lead, zinc and grains.

In the grouping according to origin raw and partly manufactured goods were slightly lower, reduced quotations for grains, raw rubber, raw silk, raw cotton, raw wool, hides, pig iron and non-ferrous metals more than offsetting higher prices for raw sugar, steers, calves, milk, eggs, salt, coal and idoine. Fully and chiefly manufactured goods were also lower, due to lower prices for flour, bran, shorts, rope, hessian, cottonades, denims, leather, tin plate, copper wire bars, brass, solder and copper sulphate. Domestic farm products articles of forest origin and articles of mineral origin were lower. Articles of marine origin advanced.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of October, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every

effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index numebr, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1928, and monthly since January, 1929. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

(Continued on page 1346)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

* Prior to 1926 number of commodities was 236.

(Continued from page 1338)

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.3; 1930, 65.5.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318) and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 67.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; 1928, 127.8. Natural gas 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925; 179.3; 1926, 172.4; 1927, 165.9; 1928, 158.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%. †Revised.

converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

The decline in beef prices, in progress since June, was continued during October, sirloin steak being down from an average of 35 cents per pound in September to 34 cents in October; round steak from 29·8 cents per pound in September to 28·9 cents in October; rib roast from 27·7 cents per pound in September to 26·7 cents in October; and shoulder roast from 21·1 cents per pound in September to 20·2 cents in October. Mutton was down from an average price of 29·4 cents per pound in September to 28·2 cents in October. In fresh fish cod steak and white fish were lower while halibut advanced. Lard was slightly higher at an average price of 21·1 cents per pound.

Eggs showed a substantial seasonal advance, fresh being up from 38·6 cents per dozen in September to 42·7 cents in October and cooking from 34·6 cents per dozen in September to 38 cents in October. Higher prices for milk were reported from Toronto, Woodstock, Owen Sound, Sudbury and Winnipeg. Butter showed a slight seasonal advance in most localities, dairy being up from an average of 33·1 cents per pound in September to 34·8 cents in October and creamery from 36·4 cents per pound in September to 38·7 cents in October. Cheese was slightly lower at an average price of 30·7 cents per pound, as compared with 31·1 cents in September.

Bread was again lower in the average at 7·1 cents per pound, as compared with 7·4 cents in September and 7·8 cents in January. Lower prices were reported from New Glasgow, Halifax, Truro, Moncton, Montreal, Ottawa, Brockville, Kingston, Belleville, Peterborough, Orillia, Woodstock, Chatham, Owen Sound, North Bay, Sault Ste. Marie, Prince Albert, Saskatoon, Drumheller, Edmonton, Calgary, Lethbridge and Fernie. Flour was down in many localities and averaged 4·3 cents per pound in October, as compared with 4·6 cents in September. Rolled oats was slightly lower at an average price of 5·9 cents per pound. Potatoes were down in the average from $1.62 per ninety pounds in September to $1.48 in October. Lower prices were reported from practically all localities. Prunes declined from an average price of 15·2 cents per pound in September to 14·8 cents in October. Raisins and currants showed little change. Granulated sugar was unchanged at an average price of 6·4 cents per pound. Anthracite coal

showed a slight seasonal advance to $16.10 per ton, as compared with $16.04 in September. Increases were reported from Peterborough, Oshawa, Niagara Falls, Galt, Kitchener, Stratford, Owen Sound and Fort William. Little change occurred in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices were considerably lower in October than in the previous month. No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, was down from an average price of 78·1 cents per bushel in September to 72·5 cents in October. The lower prices were said to be due mainly to good crop prospects in France and Australia, together with a supply of Russian wheat available for the market. Western barley was down from 31·7 cents per bushel to 28·2 cents; flax from $1.43 per bushel to $1.29; western oats from 33·1 cents per bushel to 32·9 cents; and rye from 42·5 cents per bushel to 37·4 cents. Flour at Toronto was down from an average price of $6.17 per barrel to $6.03. The low point for the month was $5.90 per barrel. Rolled oats was down from $2.80 per ninety pounds to $2.55. Raw sugar at New York was up from $1.15 per cwt. in September to $1.30 in October, the first advance during the current year. The higher prices were said to be due to an agreement between the Cuban and United States interests, by which the amount of sugar coming on the market would be restricted. Raw rubber at New York was slightly lower at an average price of 8·2 cents per pound, as compared with 8·3 cents in September. Santos coffee at Toronto was down from 18 cents per pound to 16·5 cents. Ontario potatoes at Toronto declined from $1.29 per bag to $1.16 and Manitoba grades at Winnipeg from 85 cents per bushel to 75 cents. Good steers at Toronto advanced from $7.22 per hundred pounds to $7.27 and calves from $11.39 per hundred pounds to $12.42. Hogs at Toronto were down from $12.21 per hundred pounds to $11.66 and lambs from $8.30 per hundred pounds to $8.26. Seasonal advances of from 1 to 2½ cents per gallon in the price of milk occurred in Montreal, Toronto, Hamilton and Regina. Creamery butter at Toronto was up from 33·8 cents per pound to 35·2 cents and at Winnipeg from 32 cents per pound to 34 cents. Fresh eggs at Montreal advanced from 43·3 cents per dozen to 52 cents, at Toronto from 38·5 cents per dozen to 48·3 cents, and at Winnipeg from 37·6 cents per dozen to 42·6 cents. The decline in raw cotton prices, which commenced in May, was continued in October, with the price at New York being down from 10·96 cents per pound in September to 10·64 cents. The lower prices were said to be due to the upward estimate of the 1930 cotton crop. Raw wool was down from 16 cents per pound to 15 cents and raw silk from $3.70 per pound to $2.80. Pig iron declined $2 per ton to $18-$19 and steel billets $1 per ton to $34. Electrolytic copper at Montreal declined from $12.12 per hundred pounds to $11.35. Copper wire at Montreal was also lower at 14½ cents per pound. Tin at Toronto was down from 32 cents per pound to 30 cents. Silver at New York declined from 36·275 cents per ounce to 35·845 cents. Red lead at Montreal declined from $8.75 per hundred pounds to $8.25.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest quarterly table giving wholesale and retail prices index numbers for various countries appeared in the LABOUR GAZETTE for October.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 69·5 for September continuing the steady decline which began in November, 1929. This index number is 1·8 per cent lower than in August. Among foods, the meat and fish group, and among non-foods the coal group showed advances, but all other groups were included in the general decline from the August level.

The *Economist* index number, on the base 1927=100, was 73·2 at the end of September, a fall of 3·8 per cent for the month and of 20·3 per cent for the twelve month period. All groups were lower than at the end of August, the greatest decline occurring in the textiles group, which amounted to 7·8 per cent for the month and to 35·1 per cent since September 30, 1929.

The *Statist* index number (in continuation of Sauerbeck's figures), on the base 1867-1877=100, was 90·8 at September 30, 1930, which is 1·5 per cent lower than at the end of August and 19·4 per cent lower than at the same date last year. The following is a quotation from the *Statist* of October 18, 1930:

"The latest fall in sterling wholesale prices has, according to the *Statist* index number, reduced to 11·8 per cent the margin which separates the general level of wholesale prices to-day from that which obtained prior to the outbreak of the war. It is now necessary to go back as far as November, 1914, to find an index number of wholesale prices lower than that recorded for the end of last month. The world is, no doubt, undergoing one of the major fluctuations in the purchasing power of its standard of values, a fluctuation fully comparable with the drastic decline in the price level that occurred in 1920-1921 and perhaps more disturbing than that decline since the earlier movement immediately followed a boom of definitely inflationary character, while the slump which is still continuing occurred after a period in which sterling wholesale prices had been slowly sagging. The following table shows that the fall in wholesale prices over the past twelve months has been fairly well spread over all categories of representative commodities. During this period foodstuffs have fallen in price by 15·9 per cent and materials by 21·6 per cent. The general character of this fall in prices would seem to indicate that we are witnessing a genuine appreciation in our standard of value as well as the effects of a somewhat unbalanced expansion in production."

Cost of Living.—The Ministry of Labour index number, on the base July, 1914=100, was 156 at October 1, as compared with 157 at September 1. This decrease was due to lower prices for flour and bread, potatoes, bacon and sugar, partly offset by seasonal increases in the prices of eggs and milk. There was a small decline in clothing and a small increase in fuel and light.

Belgium

Wholesale Prices.—The index number of the Ministry of Industry, Labour and Social Welfare, on the base April, 1914=100, was 729 for August, a decline of 1·4 per cent for the month and of 14·2 per cent since August, 1929. Of the 17 groups, 9 were lower than in August, 2 showed increases and 6 were unchanged.

Cost of Living.—The index number of the Federal Statistical Office, on the base 1913=100, was 240·27 for September as compared with 238·43 for August. Food, clothing and sundries were higher, while rent and heat and light showed declines.

Australia

Wholesale Prices.—The Melbourne index number, on the base 1911=1,000, was 1,657 for June, as compared with 1,683 for May and 1,662 for April. As compared with June, the index number for metals and coal, jute, leather, wool, etc., dairy produce, meat and building materials were lower, while agricultural produce, etc., and chemicals were higher; groceries were unchanged.

New Zealand

Wholesale Prices.—The index number of the Census and Statistics Office, on the base 1909-1913=1,000, was 1,536 for August as compared with 1,519 for July. This increase was due to advances in wood and wood products, metals and their products and non-metallic minerals and their products especially mineral oils.

Cost of Living.—The index number of the Census and Statistics Office, on the base July, 1914=1,000, was 1,569 for August as compared with 1,583 for May. In this three month period, food, rent, clothing, etc., and miscellaneous commodities all declined while fuel and light advanced.

United States

Wholesale Prices.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 84·2 for September, as compared with 84·0 for August. Advances were noted in farm products, foods, hides and leather products and fuel and lighting. These increases were partly offset by declines in textile products, metals and metal products, building materials, chemicals and drugs, house-furnishing goods and miscellaneous commodities.

The *Annalist* index number, on the base 1913=100, was 121·7 for October, a decline of 1·4 per cent from September. All groups were lower than in August with the exception of food products and building materials which advanced.

Bradstreet's index number showing the cost of a list of 106 commodities was $10·0573 at November 1, a fall of 2·3 per cent for the month and the thirteenth successive monthly decline. This is a decrease of 19 per cent from November 1, 1929. Of the 13 groups, 9 declined, the greatest falls occurring in metals, hides and leather and provisions. Two groups advanced in the month, namely naval stores and miscellaneous products, while chemicals and drugs and coal and coke were unchanged.

Cost of Living.—The index number of the Department of Labour and Industries of Massachusetts, on the base 1913=100, was 153·9 for September, as compared with 153·7 for August. The food group advanced due to higher meat prices; fuel and light were also higher; clothing showed a decline while shelter and sundries were unchanged.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1930

THE number of fatal industrial accidents (including fatalities from industrial diseases included by workmen's compensation boards, etc., and also fatalities to persons incidentally to the pursuit of their occupations), which were recorded in the Department as occurring during the third quarter of 1930, was 442, there being 146 in July, 184 in August and 112 in September.

The report for the second quarter of 1930 was given in the LABOUR GAZETTE, August, page 983. In the third quarter of 1929, 454 fatal accidents were recorded (LABOUR GAZETTE; November, 1929, page 1301.) The supplementary lists of fatal accidents on pages 1359 to 1362 contain 83 for the first half of 1930, and 11 for 1929.

In this series of reports it is the custom to record industrial accidents under the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the provincial workmen's compensation boards, the Board of Railway Commissioners of Canada, and from certain other official sources; and from the correspondents of the LABOUR GAZETTE. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the third quarter of 1930 were as follows: agriculture, 35; logging, 22; fishing and trapping, 6; mining, non-ferrous smelting and quarrying, 92; manufacturing, 33; construction, 86; electric light and power, 19; transportation and public utilities, 89; trade, 16; service, 44.

Of the mining accidents, 25 fatalities were in "metalliferous mining," 60 fatalities were in "coal mining," 5 in "non-metallic mineral mining and quarrying," n.e.s., and 2 in "structural materials."

Of the accidents in manufacturing, 3 were in "vegetable foods, drink and tobacco," 2 in "animal foods," 8 in "saw and planing mill products," 2 in "pulp, paper and paper products," 2 in "printing and publishing," 11 in "iron, steel and products," 2 in "non-metallic mineral products," and 3 in "chemical and allied products."

In construction there were 37 fatalities in "buildings and structures," 7 in "railway construction," 2 in "shipbuilding," 22 in "highway and bridge," and 18 in "miscellaneous construction."

In transportation and public utilities there were 35 fatalities in "steam railways," 3 in "street and electric railways," 27 in "water transportation," 5 in "air transportation," 12 in "local transportation," and 7 in "telegraphs and telephones."

In trade there were 3 fatalities in "wholesale" and 13 in "retail."

Of the fatalities in service, 26 were in "public administration," 5 in "recreational," 1 in "laundering, dyeing and cleaning," 6 in "custom and repair," 4 in "personal and domestic," and 2 in "professional establishments."

The most serious disaster during the period under review occurred in a coal mine at Blakeburn, British Columbia, on August 13, when 46 miners were trapped in a gas-filled shaft by a cave-in following an explosion in the mine and succumbed to asphyxiation. For several days and nights shifts of rescue crews in gas masks toiled in the mine seeking to free their fellow workers and battled their way through over 3,000 feet of tunnel blocked by many cave-ins, before they located the bodies of the 46 miners who had been victims of deadly after-damp caused by the explosion.

A similar serious disaster occurred in a coal mine at River Hebert, Nova Scotia, on September 17, when seven miners were trapped in a gas filled slope in the mine by a cave-in and were asphyxiated by the after-damp following an explosion. Gallant efforts to release them were made by a rescue party of fellow workers who located the bodies of the seven miners.

In logging, four river drivers were drowned in Malines river, Quebec, on July 8, while trying to break up a log jam.

Three still-workers in an oil refinery at Sarnia, Ontario, were burned by flaming oil when a still exploded on July 4.

Two workers in a chemical plant at Shawinigan Falls, Quebec, lost their lives on August 6 when an explosion occurred in the plant.

Four labourers were drowned near Murray Bay, Quebec, on July 3, when their car plunged into the river while returning from work on building construction.

Two labourers were killed at Port Arthur, Ontario, on July 26, when caught under falling concrete while taking down the walls of an old elevator which had been destroyed by fire.

Two labourers on sewer construction at Hamilton, Ontario, were killed on August 23 by a premature dynamite explosion in a sewer tunnel.

In steam railways, an engineer and fireman were burned when the boiler of their engine exploded near Molson, Manitoba, on July 17.

In retail trade, three men engaged in scrap metal dealing lost their lives near Wilsonvale, Quebec, on September 16, in a collision of a train with their truck.

In public administration, two immigration inspectors (foreign) were shot by a bandit while on duty near Emo, Ontario, on August 24. Four municipal labourers at Kitchener, Ontario, were overcome by sewer gas while cleaning a sewer tank on September 2. Three members of a government survey party were drowned near Golden, B.C., on September 25, when their canoe upset.

Three employees of a circus were killed near Moncton, N.B. when their train was derailed.

It may be mentioned that during this quarter a number of drownings occurred at sea in waters adjacent to Canada which are not included in this list, owing to the fact that the men killed were employed on ships of other countries and the accidents did not occur in Canadian ports,—on September 1 the captain and nine other members of the crew of the fishing schooner *Orient*, from Seattle, U.S.A., were drowned when a freight boat collided with their schooner in the Strait of Georgia; and on September 19, the captain and cook and also eight passengers on the Newfoundland schooner *Carranza* were drowned when their schooner was struck by lightning and sank off Scatari Island, while proceeding from North Sydney, N.S. to Burin, Newfoundland.

Supplementary Lists of Accidents

The supplementary list of fatal accidents occurring during the first half of 1930, to be found after the main table of accidents, contains 83 fatalities, of which 14 were in logging, 7 in mining, non-ferrous smelting and quarrying, 21 in manufacturing, 19 in construction, 2 in electric light and power, 13 in transportation and public utilities, 2 in trade and 5 in service. Two of these accidents occurred in January, 4 in February, 2 in March, 6 in April, 22 in May and 47 in June.

Concluding the lists is a supplementary list of industrial accidents occurring during 1929. This includes 11 fatalities, of which 3 were in logging, 1 in fishing and trapping, 2 in mining, non-ferrous smelting and quarrying, 1 in manufacturing and 5 in transportation and public utilities. One of these accidents occurred in March, 1 in April, 1 in May, 1 in September, 2 in October, 4 in November and 1 in December.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1930

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCK-RAISING—				
Farmer	Near Erindale, Ont.	July 2	66	Fell from load of hay.
Farmer	Cedars, Que.	" 5	71	Thrown into machine when horses bolted while gathering hay.
Farm hand	Domremy, Alta.	About July 5	20	Kicked by horse.
Farmer	Near Elmstead, Ont.	About July 8	57	Fell from wagon seat.
Farmer	Near Regina, Sask.	" 9	37	Struck by lightning.
Farmer's son	Calmar, Alta.	" 14	17	Run over by steam engine.
Farmer	Near Westmeath, Ont.	" 19	62	Fell from mow in barn.
Farmer	Near Tavistock, Ont.	" 21	47	Fell 30 feet from ladder in barn, fractured skull. Died, July 22.
Farmer	Didsbury, Alta.	" 22	54	Struck by lightning.
Farmer's son	Beatty, Sask.	" 22	.....	Struck by lightning.
Farmer	Near Sydenham, Ont.	" 28	.....	Fell from hay rack, fractured skull.
Farmer	Lake Lenore, Sask.	About July 31	23	Run over by tractor.
Farmer	Near Brockville, Ont.	About July 31	62	Injured when his horses ran away. Died Aug. 26.
Farm hand	Near Yorkton, Sask.	Aug. 2	18	Run over by binder wheel when horses started. Died Aug. 26.
Fox rancher	Near Summerside, P.E.I.	" 4	25	Collision of train with their car while returning
" "			23	from ranch.
Farmer	Near Kitchener, Ont.	" 5	35	Thrown from binder against stump when horses bolted.
Farmer	Near Youngstown, Alta.	" 11	.....	Thrown from hay rack when team bolted.
Thresher	Teeswater, Ont.	" 12	63	Run over by separator when team became unruly. Died, Aug. 17.
Farmer	Near Chatham, Ont.	" 16	56	Gored by bull.
Farmer	Albertown, Sask.		About 20	Struck by pieces of stone when grind stone fell to pieces.
Farm hand	Near London, Ont.	Aug. 17 " 23	19	Fell into well and drowned when plank broke.
Farmer	Near Bruna, Sask.	..... Aug. 25	About 50	While repairing tractor it slipped into gear and ran over him. Died, Aug. 26.
Farmer	Near Ruscomb, Ont.	" 26	74	Kicked by horse. Died, Aug. 29.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1930—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCK RAISING—*Con.*				
Farmer	Haley's Station, Ont.		About 50	Thrown under wheels of wagon when team bolted.
		Aug. 30		
Farmer's son	Elm Creek, Man.	" 30	9	Crushed under wagon load of grain.
Farmer	Billings Bridge, Ont.	Sept. 2	64	Collapsed from strain during threshing operations. Died, Sept. 3.
Farmer's son	Odessa, Sask.	" 2	13	Thrown from wagon when horses bolted.
Farmer	Burns Lake, B.C.	About Sept. 5		Fell off stack of hay.
Farmer	Near Simcoe, Ont.	Sept. 6	52	Crank flew back and struck him while cranking tractor.
Farmer	Willow Range, Man.	" 8	21	Collision of train with plow he was driving.
Farmer	Near Three Rivers, P.Q.	" 8	80	Gored by bull.
Farmer's son	Near Togo, Sask.	" 10	13	Caught in pulley of tractor.
Farm hand	St. Paul, Que.	" 20	19	Explosion of can of gasoline.
Farmer	Near Lloydminster, Alta.	About Sept. 24	44	Trampled by horse.
LOGGING—				
Logger	David Bay, B.C.	July 1	25	Crushed between logs.
Boatman	Twin Falls, Ont.	July 4	24	Drowned when his boat overturned.
River driver	Malines River, P.Q.	" 8	41	
" "	" "	" 8	23	Drowned while trying to break up log jam.
" "	" "	" 8	19	
" "	" "	" 8	26	
River driver	Mont Laurier, P.Q.	" 14	34	Fell from log into river and drowned.
Logman	Near Kenora, Ont.	" 19	21	Fell from log and drowned.
River driver	Gordon Creek, Ont.	" 23	35	Fell into driver and drowned.
Logger	Sooke, B.C.	July 29		Struck by falling tree.
Logman	Whitefish Lake, Ont.	Aug. 21	21	Fell into lake and drowned.
Watchman	Frederick, Arm, B.C.	" 25	29	Fell from boomstick and drowned.
Logger	Halfway River, B.C.	" 28	26	Crushed between logs.
Labourer	Canton Nemtaye, Que.	" 27	33	Struck by falling tree.
Log driver	Temiskaming, Que.	Sept. 8	29	Fell from log pile, fractured skull. Died, Sept. 9.
Bucker	Rock Bay, B.C.	" 15	22	Log rolled over him.
Labourer	Clova, Que.	" 17	28	Drowned.
Boom man	Malahat, B.C.	" 20	33	Fell off boom into water and drowned.
Log driver	Rockway Rapids, Que.	" 22	40	Drowned.
Faller	Montmorency Co., Que.	" 23	39	Crushed by falling tree.
Logger	Maline River, Que.	" 26		Drowned when he fell off log while working on jam.
Labourer	Driftpile, Alta.	" 29	26	Struck by falling tree. Died, Oct. 1.
FISHING AND TRAPPING—				
Fisherman	Chimney Corner, N.S.	July 4		Drowned when his boat was overturned by tide.
Fisherman	Near South Bay Mouth, Ont	" 7	39	Fell from fishing boat.
Worker on trawler	Near Halifax, N.S.	" 13		Fell from wharf and drowned.
Fisherman	Red River, Man.	Aug. 10	23	Drowned when his skiff upset.
Fisherman	Fraser River, B.C.	" 16	49	Drowned when he jumped overboard when fire broke out on his boat.
Fisherman	Vancouver, B.C.	" 17	45	Drowned when his boat capsized from swells of vessels.
MINING, NON-FERROUS, SMELTING AND QUARRYING—				
Metalliferous mining—				
Mucker	Frood, Ont.	July 2	29	Crushed by falling rock.
Miner	Frood, Ont.	" 22	27	Fell 40 feet from stope.
Miner	Frood, Ont.	" 22	30	Buried by cave-in following blasting.
"	"	" 22	25	
Fitter at Nickel refinery	Port Colborne, Ont.	" 24	24	Fell 34 feet from cable crane, fractured skull.
Scaler	Creighton Mine, Ont.	" 23	30	Struck by piece of timber.
Machine man	Schumacker, Ont.	" 27	41	Silicosis; disabled since Nov. 1, 1926.
Feeder	Coniston, Ont.	" 26	32	Burned when can of hot sinter upset.
Carpenter	Trail, B.C.	Aug. 1	29	Fell into bin filled with calcine.
Repairman	Anyox, B.C.	" 2	42	Struck by drive belt when it broke.
Mucker	Kirkland Lake, Ont.	" 2	56	Fell 75 feet in mine, fractured skull.
Labourer	Rouyn, Que.	" 3	34	Crushed between belt and motor when he fell while repairing motor.
Miner	Copper Mountain, B.C.	" 6	28	Fell down hole in mine.
Machinists' helper	Rouyn, Que.	" 12	25	Fell into ore heap, fractured skull.
Miner	Timmins, Ont.	" 15	51	Fell into chute, fractured skull.
Timekeeper	Schumacker, Ont.	" 17	28	Slipped and fell off plank, fractured skull. Died, Sept. 13.
Trammer	Frood, Ont.	" 19	27	Struck by falling post fractured skull. Died, Aug. 20.
Miner	Kimberley, B.C.	" 19		Neck broken when ladder on which he was working fell.
Miner	Noranda, Que.	" 27		Buried by falling rock caused by dynamite explosion in pit.
Timekeeper	Timmins, Ont.	About Sept. 5	32	Skull fractured in mine accident. Died, Sept. 13.
Miner	Rouyn, Que.	" 13		Buried under fall of stone.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1930—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
MINING, NON-FERROUS, SMELTING AND QUARRYING—*Con.*				
Metalliferous Mining, etc.—Conc.				
Electrician helper	Kirkland Lake, Ont.	Sept. 18	31	Electrocuted when he touched high tension wire.
Miner	Kimberley, B.C.	" 20	21	Fell into rock chute.
Underground switchman.	Frood, Ont.	" 24	26	Fell and run over by mine train. Died Sept. 25.
Worker in smelting plant.	Copper Cliff, Ont.	" 29	22	Electrocuted while repairing conveyor belt tripper.
Coal Mining—				
Driver	Reserve, N.S.	July 2	18	Crushed by fall of stone.
Miner	Liverpool, N.S.	About July 27	53	Struck by prop which was knocked down when struck by large stone.
Miner	Glace Bay, N.S.	July 30	17	Crushed in air driven colliery engine.
Miners (46)	Blakeburn, B.C. (49, 19, 36, 27, 43, 27, 30, 22, 37, 34. 37, 30, 30, 40, 24, 35, 31, 29, 42, 34, 39, 39, 42, 40, 38, 27, 28, 25, 35, 42, 22, 49, 43, 38, 65, 33, 28, 45, 36, 36, 27, 38, 44, 24, 30, 42.)	Aug. 13	..... (ages in col. 2)	Trapped in gas filled shaft by explosion in mine and succumbed to asphyxiation.
Miner	Glace Bay, N.S.	Aug. 15	58	Crushed by fall of rock from roof in mine punctured lung. Died Aug. 18.
Miner	Near Roche Percée, Sask.	" 21	28	Crushed by fall of rock.
Miner	Fernie, B.C.	" 30	29	Struck by mine car.
Miner	Glace Bay, N.S.	Sept. 10	40	Struck his head on low beam while riding on co car out of pit.
Miner	River Hebert, N.S.	" 17	47	Explosion of gas pocket in mine.
Miner			21	
Miner			52	
Miner			21	
Miner			45	
Miner			21	
Miner			64	
Non-Metallic Mineral Mining and Quarrying (n.e.s.)—				
Still worker	Sarnia, Ont.	July 4	44	Burned by flaming oil when still explo ded at refinery. Third man died July 16.
Still worker	Sarnia, Ont.	" 4	37	
Still worker	Sarnia, Ont.	" 4	41	
Labourer in Soapstone quarry.	Broughton, Que.	Sept. 5	17	Electrocuted.
Foreman for Oil Co.	Near Glencoe, Ont.	" 8	54	Electrocuted while locating a blown out fuse.
Structural materials—				
Labourer	Dundas, Ont.	July 16	34	Fell 16′ at quarry.
Worker in stone quarry.	Curryville, N.B.	" 17	28	Electrocuted when crane struck transmission wires.
MANUFACTURING—				
Vegetable foods, drink and tobacco—				
Labourer with canners.	Aberarder, Ont.	" 20	About 30	Caught in drive pulley while putting dressing on belt.
Worker at cereal plant.	Saskatoon, Sask.	Sept. 11	.....	Fell 25′ to concrete floor from roof of shed. Die Sept. 16.
Worker in bakery	Montreal, Que.	" 12	13	Crushed when he fell into dough mixing machine.
Animal foods—				
Engineer at dairy plant.	Ottawa, Ont.	Aug. 19	52	Electrocuted while locating trouble in ice crushers.
Watchman at cannery.	Seymour Inlet, B.C.	Sept. 1	About 60	Fell into water and drowned when he slipped on log.
Saw and planing mill products—				
Labourer	St. Edwidge, Que.	July 5	17	Finger injured. Died during operation.
Lumber piler	Spragge, Ont.	" 11	26	Fell into water and drowned.
Saw mill operator	East Korah, Ont.	About July 11	79	Struck by slab when it flew from saw.
Mill worker	Dolbeau, Que.	" 15	31	Caught while adjusting belt on engine pulley.
Workman	Levis, Que.	Aug. 28	34	Crushed under pile of lumber when it gave way. Died Sept. 5.
Off bearer	Victoria, B.C.	" 28	55	Struck by splinter from edger.
Labourer	Scotstown, Que.	Sept. 24	17	Injured when sawing machine broke.
Labourer			17	
Pulp, paper and paper products—				
Workman	Liverpool, N.S.	Aug. 3	42	Electrocuted when he came in contact with high tension wire.
Labourer	Three Rivers, Que.	" 23	25	Struck on head by falling log which was hurled into air.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1930—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—*Con.*				
Printing and publishing—				
Printer	Ottawa, Ont.	Aug. 26	49	Burned when a vat of caustic soda overflowed. Died Aug. 30.
Worker with engraving co.	Hamilton, Ont.	Sept. 26	17	Electrocuted when he touched live wire.
Iron, steel and products—				
Labourer in steel foundry.	Shawinigan Falls, Que.	Aug. 14	33	Lost balance and fell to concrete pavement.
Factory worker	Winnipeg, Man.	July 24	21	Explosion of gasoline drum while repairing it with acetylene torch.
Metal grinder with auto mfrs.	Oshawa, Ont.	" 24	51	Grinders' phthisis, laid off on Feb. 7, 1929.
Steel worker	Montreal, Que.	" 28	25	Struck on head by piece of steel.
Steel worker	Montreal, Que.	Aug. 5	52	Struck on head by piece of steel.
Worker in moulding shop.	Kingston, Ont.	" 11	53	Crushed between two iron pots that were being loaded.
Worker	Lachine, Que.	" 13	41	Crushed by falling steel beam.
Watchman	Montreal, Que.	" 26	64	Struck by auto when leaving work. Died Aug. 29.
Labourer	Hamilton, Ont.	Sept. 2	43	Crushed against hand rail while ascending steps from pit.
Worker in bolt plant.	Vancouver, B.C.	" 23	45	Struck by heavy iron pipe band, broken neck.
Fitter at locomotive works.	Kingston, Ont.	" 29	55	Struck by crane.
Non-metallic mineral products—				
Sample boy at oil refinery.	Sarnia, Ont.	" 10	23	Burned when removing gasoline can from fire in sink. Died Sept. 12.
Worker in oil refinery.	Sarnia, Ont.	" 13	22	Burned in fire which broke out in laboratory.
Chemical and allied products—				
Worker in chemical plant.	Shawinigan Falls, Que.	Aug. 6	25	Explosion in plant. Both died Aug. 7.
Worker in chemical plant.			37	
Worker at chemical plant.	Shawinigan Falls, Que.	Sept. 6	28	Fell from scaffolding, died Sept. 7.
CONSTRUCTION—				
Buildings and structures—				
Labourer				
Labourer				
Labourer	Murray Bay, Que.	July 3	.....	Drowned when their car plunged into river while returning from work.
Labourer				
Labourer				
Labourer	Quebec, Que.	" 7	20	Fell 60′ down elevator shaft.
Labourer	Kingston, Ont.	" 9	38	Fell 80′ from scaffolding.
Building foreman for railway co.	Westmoreland Co., N.B.	July 9	42	Fell from top of building, fractured spine. Died July 17.
Checker	Fort William, Ont.	" 12	46	Fell into river and drowned while riding bicycle
Carpenter	Pte. du Fort, P.Q.	" 16	66	Cut in toe by axe, septicaemia. Died Aug. 26.
Carpenter's helper	Restigouche Co., N.B.	" 16	19	Fell from barn; broken neck.
Worker	Lachine, Que.	" 19	63	Fell from scaffold, died July 20.
Sign hanger	Vancouver, B.C.	" 21	42	Fell while erecting sign.
Labourer	Pont Viau, Que.	" 21	28	Fell 26 feet from building, fractured skull.
Contractor	Matheson, Ont.	" 22	34	Fell from scaffold when it collapsed.
Labourer	Port Arthur, Ont.	" 26	26	Caught under falling concrete while taking down walls of old elevator destroyed by fire.
Labourer			18	
Workman	Hamilton, Ont.	" 26	43	Struck by falling bricks, fractured skull.
Pile driver	Sorel, Que.	" 28	23	Fell from derrick into river and drowned.
Labourer	Montreal, Que.	" 28	28	Fell 100 feet from scaffold.
Bricklayer	Montreal, Que.	" 30	30	Fell 20 feet to concrete floor.
Cable splicer's helper	Windsor, Ont.	Aug. 5	16	Electrocuted when current was turned on.
Painter	Prescott, Ont.	" 5	24	Fell from scaffold.
Labourer	Vancouver, B.C.	" 8	42	Fell from roof of building. Died Aug. 9.
Carpenter	Preston, Ont.	" 8	59	Scraped head on nail on roof, blood poisoning. Died Sept. 20.
Worker on new power plant.	Slave Falls, Man.	" 14	29	Fell from scaffold.
Mechanic for elevator co.	Toronto, Ont.	" 19	64	Struck by plank while rolling bumper springs into pit. Died Sept. 15.
Steeplejack	Montreal, Que.	About Aug. 23	27	Fell from chair when rope broke while painting water tank. Died Aug. 24.
Roofer	L'Epiphanie, Que.	Aug. 27	70	Fell from ladder.
Labourer	Saskatoon, Sask.	" 27	.....	Struck by bucket of clam shell while unloading gravel car. Died Sept. 2.
Carpenter	Leamington, Ont.	" 27	60	Fell from roof of barn, fractured skull.
Labourer	Ottawa, Ont.	" 29	29	Fell 75 feet from girder of structure.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1930—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—*Con.*				
Buildings and structures—Con.				
Workman erecting sign.	Quebec, Que.	Sept. 4	45	Fell from roof of building, fractured skull.
Carpenter	Walkerville, Ont.	" 10	49	Collapsed on roof of building.
Bricklayer	Three Rivers, Que.	" 11	48	Fell from scaffolding, fractured skull.
Labourer	Ottawa, Ont.	" 15	23	Fell 21 feet from top of form for concrete wall.
Foreman of iron works.	Near Gananoque, Ont.	" 23	35	Injured when auto in which he was riding to work side swiped another.
Railway—				
Labourer	New Westminster, B.C.	July 7	45	Ran over by gravel train.
Worker with crushed rock co.	Hawke Lake, Ont.	About July 12	35	Crushed by rock which fell from bank.
Labourer	Moose River, Ont.	Aug. 23	45	Swept by current and drowned while attempting to walk across river.
Member of survey party.	McGregor River, B.C.	About Sept. 4	.....	Drowned when boat upset.
Labourer Labourer	Near Lansdowne, Ont.	" 10	.....	Fell from lorry train when motor became separated.
Labourer	Medicine Hat, Alta.	" 30	42	Cave-in of ditch.
Shipbuilding—				
Ship worker	Liverpool, N.S.	Aug. 5	23	Fell 25 feet from side of ship. Died Aug. 9.
Workman	Chicoutimi, Que.	Sept. 23	40	Pinned under ram of derrick which got loose.
Highway and bridge—				
Master mechanic	Wyoming, Ont.	July 1	38	Burned when acetylene welding torch ignited some gasoline. Died July 2.
Painter	Near St. Catharines, Ont.	" 3	21	Struck on head by counter weight as bridge was being raised.
Section foreman	Castle Bay, N.S.	" 3	65	Struck by falling tree, fractured spine.
Farm hand on road repair.	L'Avenir, Que.	" 11	21	Buried under fall of gravel.
Truck driver	Edmonton, Alta.	" 14	About 30	Crushed under truck when catch of dump slipped.
Labourer with contractors.	Mundare, Alta.	" 16	30	Neck broken in car accident.
Labourer with contractors.	Brainard, Alta.	" 18	45	Run over by engine.
Compress operator	Cr. des Prairies, Que.	" 19	32	Burned by explosion of gasoline barrel. Died July 20.
Labourer	St. Flavie, Que.	" 23	23	Fell from trestle over river when stone dislodged truck.
Worker in gravel pit.	Maple Ridge, Ont.	" 24	45	Fell under truck load of gravel and was run over.
Labourer	Winnipeg, Man.	" 28	42	Collapsed from heat while at work.
Labourer	Sandwich, Ont.	" 28	42	Collapsed from heat while unloading truck of cement.
Labourer	St. Canut, Que.	" 30	31	Struck by wheel of crusher.
Labourer Labourer	Jonquiere, Que.	" 30	45 25	Collision of two auto trucks.
Workman	Laprairie, Que.	Aug. 5	30	Burned when tractor on which he was working exploded.
Engineer	Brosseau, Que.	" 5	22	Burned by explosion of gasoline tank of tractor.
Worker	Near Fort William, Ont.	" 6	62	Tree fell on him. Died Aug. 8.
Truck driver	Near Waldeck, Sask.	" 8	19	Collision of train with his truck.
Labourer	Bagotville, Que.	" 11	37	Run over by truck.
Farmer on roadwork	St. Phillippe, Que.	" 11	33	Collision of train with his load.
Labourer	Near St. Lazare, Que.	" 25	21	Electrocuted by wire knocked down by dynamite blast.
Miscellaneous—				
Lineman on electrical development.	Jackson's Point, Ont.	July 9	20	Electrocuted while working on line which became energized.
Sub-foreman on line construction.	Lefrey, Ont.	" 11	32	Electric burns when cable touched transformer tap while unwinding cable from coil. Died July 16.
Labourer	Powell River, B.C.	" 15	.....	Struck by rock skip.
Worker on power dam construction.	Chats Falls, Que.	" 18	18	Buried by cave-in sand pit.
Well digger	Cooksville, Ont.	Aug. 1	35	Injured by dynamite blast while digging well.
Lineman on engineering construction.	Plessissville, Que.	" 11	34	Paralyzed from auto collision. Died Sept. 16.
Labourer on power development.	Beauharnois, Que.	" 15	24	Buried under truck load of earth.
Well digger	St. Joseph d'Alma, Que.	" 20	29	Buried by cave-in of well.
Worker on tunnel construction.	Windsor, Ont.	" 21	23	Electrocuted by touching charged equipment.
Labourer on sewer construction. Labourer	Hamilton, Ont.	" 23	38 31	Premature dynamite explosion in sewer tunnel.
Adzeman on harbour	Churchill, Man.	" 29	40	Head crushed by swinging timber boom and knocked into water.
Worker on dredge	Port Stanley, Ont.	" 31	24	Fell into water and drowned when plank to derrick broke.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1930—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—*Con.*				
Miscellaneous—Con.				
Labourer on harbour construction.	Churchill, Man.	Sept. 6	39	Struck by gravel car when it dumped and threw into water and drowned.
Worker on pier construction.	Halifax, N.S.	" 9	17	Caught in sand and gravel chute.
Dynamite man on power line construction.	Geizer's Hill, N.S.	" 17	48	Delayed explosion during dynamite blastingk. operations.
Labourer on pontoon pipe line construction	Hamilton, Ont.	Sept. 19	.....	Fell off pipe line into water and drowned.
Carpenter on power development	Beauharnois, P.Q.	" 22	44	Fell from ladder, fractured skull.
Electric light and power—				
Worker	Halifax, N.S.	July 5	34	Electrocuted when he touched high tension wire while painting poles.
Lineman	Halifax, N.S.	" 9	54	Burned when he came in contact with live wire. Died, July 23.
Mechanic	Near Calumet, Que.	" 11	43	Caught in pulley while putting on belt.
Lineman	Paris, Ont.	" 14	44	Electrocuted while working on pole.
Power plant worker	Musquash, N.B.	" 15	46	Electrocuted when ladder held by him came in contact with lighting arrester.
Lineman	Lefroy, Ont.	About July 16	32	Electric burns received from transformer.
Lineman on tram line	Stewart, B.C.	July 19	45	Fell from tower on tram line. Died, July 24.
Lineman	Lyons Brook, N.S.	" 29	35	Electrocuted while working on transformer pole.
Lineman	Montmagny, Que.	Aug. 6	40	Electrocuted while repairing line damaged by storm.
Lineman	Winnipeg, Man.	" 6	21	Fell from pole.
Lineman	Near Port Arthur, Ont.	" 12	30	Electrocuted and fell from pole when he touched live wire.
Lineman	Niagara Falls, Ont.	" 13	41	Electrocuted when he touched high tension wire. Died, Aug. 14.
Labourer at power plant	Island Falls, Man.	" 14	27	Electrocuted when he touched high tension wire.
Lineman	North Battleford, Sask.	Sept. 4	About 24	Electrocuted when he touched high tension wire while working on power line platform.
Lineman	Moose Jaw, Sask.	" 4	About 45	Electrocuted when he came in contact with high tension current while working on transformer.
Lineman	Winnipeg, Man.	" 6	21	Fell from pole.
Lineman	Brampton, Ont.	" 11	44	Electrocuted when he touched live wire.
Lineman	Calgary, Alta.	" 14	22	Electrocuted while working on power line.
Lineman	St. Johns, Que.	" 25	19	Electrocuted while cleaning lamp.
TRANSPORTATION AND PUBLIC UTILITIES—				
Steam Railways—				
Yard brakeman	Windsor, Ont.	July 6	57	Fell from car and was run over.
Section labourer	Gervais Man.	" 9	32	Sunstroke.
Labourer	Woodside, N.S.	" 12	71	Fell from flat car while unloading machinery.
Section foreman	Mile 47, H.B. Rly, Man.	" 13	31	Fell off gas car and was struck by another ca Died, July 17.
Watchman	Mimico Bridge, Ont.	" 16	65	Struck by street car.
Engineer	Near Molson, Man.	" 17	46	Explosion of boiler in engine.
Fireman	" "		51	
Brakeman	Montreal, Que.	" 19	28	Run over by train when he fell in yard during switching operations. Died, July 20.
Labourer	Stirling Siding, Alta.	" 19	35	Knocked off front of engine by spreader which raised.
Section foreman	Garmi, Siding, B.C.	" 20	31	Knocked from motor car by flying piece of broken fly wheel.
Sectionman	Watford, Ont.	" 21	48	Injured hand while handling tie. Blood poisoning. Died, Sept. 20.
Brakeman	Hagersville, Ont.	July 22	31	Fell under train that was being switched.
Blacksmith helper	Montreal, Que.	" 22	36	Struck by oil furnace door which was blown off by explosion.
Conductor	Field, Ont.	" 26	47	Run over by train while uncoupling cars.
Brakeman	Montreal, Que.	" 28	55	Fell between two freight cars that were being switched.
Sectionman	Near Merriton, Ont.	About July 28	39	Collision of two gasoline speeders.
Sectionman	Near Port Arthur, Ont.	Aug. 3	47	Run over by freight train.
Engineer	Near Powassan, Ont.	" 4	52	Train derailed owing to broken rail.
Labourer	M.P. 107-108, Ont.	" 8	29	Finger cut by track spike, septicaemia. Died, Aug. 20.
Switchman	Montreal, Que.	" 15	54	Struck by an electric train.
Labourer	Morgan, Ont.	" 22	20	Train struck track motor on which he was riding.
Freight checker	Montreal, Que.	" 23	39	Fell down elevator shaft.
Labourer	Cullen, Sask.	" 23	63	Fell from car while unloading ties.
Fireman	Near Hawke Lake, Ont.	" 26	38	Fell from freight train.
Fireman	Near Cochrane, Ont.	" 28	33	Injured when engine jumped track. Died, Aug.30

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE THIRD QUARTER OF 1930—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—*Con.*				
Steam Railways—Con.				
Engineer	Pembroke, Ont.	Aug. 29	55	Injured when train was derailed. Died, Oct. 11.
Brakeman	Beauharnois, Que.	" 30	50	Struck by train. Died, Sept. 1.
Section foreman	Mile 140, Haute Sub., Man.	" 31	49	Struck by train while riding on section speeder.
Section hand	Near Dunnville, Ont.	Sept. 1	.....	Struck by train.
Freight handler	Fort William, Ont.	" 4	25	Fell off dock and drowned while riding bicycle to work.
Car-man	Oshawa, Ont.	" 8	.....	Overcome by gasoline fumes in tank car. Died, Sept. 9.
Sectionman	Port Hastings, N.S.	Sept. 13	33	Struck by train.
Brakeman	McIntosh, Ont.	" 17	32	Collision of two grain trains.
Yardman	Toronto, Ont.	" 24	40	Crushed between cars while coupling same.
Coach cleaner	Port Arthur, Ont.	" 25	26	Crushed between two cars.
Street and Electric Railways—				
Motorman	Calgary, Alta.	July 13	62	Injured in collision of two street cars. Died, July 18.

Logger	Deep Bay, B.C.	" 29	24	Crushed between logs. Died, July 15.
MINING, NON-FERROUS, SMELTING AND QUARRYING—				
Metalliferous Mining—				
Cager helper	Noranda, Que.	" 18	35	Thrown out of cage and crushed between floor of cage and shaft timber.
Mining engineer	Albany River, Que.	About June 25	.....	Drowned when plane overturned while landing.
Dryman	Timmins, Ont.	June 18	66	Window fell on his wrist. Died, June 28.
Craneman at nickel refinery	Port Colborne, Ont.	" 26	21	Fell from ladder. Died, June 29.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING FIRST HALF OF 1930—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
MINING, NON-FERROUS, SMELTING AND QUARRYING—*Con.*				
Metalliferous Mining—Cont'd.				
Miner	Silverado, B.C.	June 30	48	Fell 140 feet down shaft, fractured skull.
Coal Mining—				
Miner	Natal, B.C.	May 20	45	Injured hand, infection necessitating amputation.
Structural materials—				
Labourer	Dupuy, Que.	Mar. 13	15	Crushed by fall of gravel in gravel pit.
MANUFACTURING—				
Textiles and Clothing—				
Wool tender on dryer	Sherbrooke, Que.	May 5	58	Cut finger on spike of machine, blood poisoning.
Saw and Planing Mill Products—				
Edgerman	Madawaska Co., N.B.	June 26	32	Struck by piece of lumber from edger.
Labourer	Victoria Co., N.B.	" 28	21	Struck by stick from roller. Died, June 29.
Wood Products—				
Cabinet maker	Sydney, N.S.	Feb. 5	45	Struck by flying chip from moulder, blood poisoning. Died, Feb. 15.
Labourer in match factory	Berthierville, Que.	May 16	33	Crushed between top of car and bottom of cab on crane.
Pulp, Paper and Paper Products—				
Repairman	Chicoutimi, Que.	" 24	46	Crushed in machine.
Winder boy	Joliette, Que.	" 24	18	Arm crushed between rollers. Died, July 9.
Wood handler	Cap Madeleine, Que.	June 20	30	Struck on head by falling piece of pulp wood.
Labourer	Restigouche, Co., N.B.	" 24	20	Struck by pulp bales.
Labourer	Chandler, Que.	" 26	31	Electrocuted.
Iron, Steel and Products—				
Iron moulder	Montreal, Que.	April 12	20	Truck load of iron fell on him.
Coremaker	Selkirk, Man.	May 22	45	Struck on arm by sand rammer. Died, June 6.
Trucker	Brantford, Ont.	June 2	56	Thumb crushed by falling steel from truck. Died, June 28.
Labourer	Toronto, Ont.	" 16	32	Leg struck by sledge hammer, infection. Died, July 19.
Labourer with stove manufacturers	L'Islet, Que.	" 25	24	Electrocuted.
Non-Metallic Mineral Products—				
Machinist with artificial stone mfrs	Toronto, Ont.	Feb. 15	38	Bruised hand when wrench slipped from bolt. Died, Sept. 21.
Fireman in oil refinery	Montreal, Que.	June 13	21	Burned by explosion in plant.
Brickmaker	Laprairie, Que.	May 20	57	Fell astride a plank. Died, July 12.
Labourer with lime burners	St. Marc, Que.	June 9	38	Burned when he fell into lime pit.
Conveyor operator with gas co.	Toronto, Ont.	" 13	58	Fell against iron standard when cable broke.
Blockmaker with concrete block mfrs	Fairbank, Ont.	" 30	24	Wagon ran over him. Died, July 12.
CONSTRUCTION—				
Buildings and structures—				
Mason on airport construction	St. Hubert, Que.	" 15	46	Fell under wheels of truck.
Watchman	Montreal, Que.	Feb. 25	43	Fell and injured chest, blood poisoning. Died, April 12.
Labourer	Montreal, Que.	April 8	39	Struck by falling piece of iron. Died April 11.
Painter	Montreal, Que.	" 24	70	Cerebral hemorrhage due to his work. Died April 25.
Millwright	Windsor, Ont.	May 5	40	While assisting in erection of machinery he slipped and caught arm between timbers.
Carpenter	Sydney, N.S.	" 30	60	Cut and bruised thumb from fall on floor, blood poisoning. Died June 7.
Painter	Montreal, Que.	June 7	23	Sunstroke while working on roof. Died June 20.
Sign writer	Vancouver, B.C.	" 17	21	Fell from scaffold. Died Aug. 19.
Ironworker	Toronto, Ont.	" 22	23	Knee injured while climbing a column on June 26, 1928.
Carpenter	South Porcupine, Ont.	" 25	40	Fell from mill, injuring head and spine. Died July 3.
Labourer	New Westminster, B.C.	" 28	42	Fell from ladder, fractured skull. Died June 30.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING FIRST HALF OF 1930—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—*Con.*				
Highway and bridge—				
Labourer	Restigouche Co., N.B.	June 6	49	Horses ran away.
Labourer on road repair.	La Patrie, Que.	" 19	15	Fell from truck and was run over.
Road worker	Lunenburg Co., N.S.	" 24	46	Bruised finger, septic poisoning. Died July 20.
Labourer	Cape Breton Co., N.S.	" 25	59	Struck by falling stump.
Riff rigger	Uppernotch, Ont.	" 27	18	Lost balance and fell over side of bridge and drowned.
Miscellaneous—				
Worker on power development.	Island Falls, Man.	April 28	25	Injured during blasting operations.
Sailor on dredge	Three Rivers, Que.	June 10	18	Fell into river from dredge and drowned.
Labourer on power line construction.	Georgeville, Que.	" 24	50	Explosion of box of dynamite.
Electric light and power—				
Lineman	St. Pascal, Que.	" 21	40	Electrocuted when he came in contact with live wire.
Electrician	Lac Megantic, Que.	" 21	53	Electrocuted.

Sailor	Off Anticosti Island, Que.	" 19	24	Fell into bunker hold and crushed under coal which fell on him.
Local transportation—				
Fuelman	New Carlisle, Que.	April 19	58	Gas poisoning.
Storage—				
Foreman at grain elevator.	Owen Sound, Ont.	Mar. 6	48	Slipped on elevator belt. Died Mar. 8.
TRADE—				
Wholesale—				
Salesman with packing house.	Quebec, Que.	April 3	32	Strained right side resulting in fluid in lung. Died May 25.
Retail—				
Foreman sticker with lumber merchants.	Ville St. Pierre, Que.	May 30	62	Septicaemia from scratched finger. Died July 3.
SERVICE—				
Public administration—				
Mechanic with water works dept.	Montreal, Que.	Jan. 1	.....	Chlorine poisoning due to his work.
Assistant fire patrol.	Montreal, Que.	May 19	36	Electric shock and burns.
Jail warden	Belleville, Ont.	About June 5	74	Struck on head by escaping prisoner. Died Oct. 21.
Fire ranger	Simon Lake, Que.	" 24	23	Drowned when canoe upset in storm.
Labourer for water and sewage dept.	St. John Co., N.B.	" 25	73	Wheelbarrow struck his head. Died July 9.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING 1929

LOGGING—				
Teamster	Heafey, Que.	Nov. 14	56	Injured when he fell on wagon wheel. Died July 21, 1930.
Logger	Adstock, Que.	" 23	47	Fell from tree. Died Mar. 30, 1930.
Log cutter	Trout Lake, Ont.	Dec. 13	.....	Crushed by falling tree. Died Aug. 13, 1930.
FISHING AND TRAPPING—				
Fisherman	Moose Lake, Man.	Oct. 5	.....	Caught in storm and drowned.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING 1929—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
MINING, NON-FERROUS SMELTING AND QUARRYING—				
Coal mining—				
Miner	Nanaimo, B.C.	Oct. 29	57	Injured when shot blew through mine pillar. Died July 11, 1930.
Driver	Nanaimo, B.C.	May 23	39	Injured by fall of rock. Died Sept. 18, 1930.
MANUFACTURING—				
Leather, fur and products—				
Fur flesher	Montreal, Que.	Nov. 29	70	Poisoned finger from splinter. Died July 27, 1930.
TRANSPORTATION AND PUBLIC UTILITIES—				
Water transportation—				
Stevedore	Halifax, N.S.	April 8	51	Slipped and fell off gangway, fractured skull. Died Aug. 7, 1930.
Purser on boat	Near Fort Vermilion, Alta.	Sept. 26	.....	Drowned from boat.
Sailor	Near Port Arthur, Ont.	Nov. 8	38	Drowned from tug.
Local transportation—				
Teamster	Toronto, Ont.	Mar. 28	68	Slipped while moving piano. Strained heart. Died July 26, 1930.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Bandsman in Military Band is not subject to Union Discipline

Six members of the executive committee of the local council of the American Federation of Labour were charged before the police magistrate for St. Catharines, Ontario, under Section 121 (e) of the Militia Act (Revised Statutes of Canada, 1927, chapter 132), with having done an act to the detriment of the bandmaster of a regimental band at St. Catharines, as the result of his having performed a military duty. The defendants had imposed a fine upon the bandmaster, under the bylaws of the union, for having played in the band on July 11, 1929, with musicians who were not members of the union. The magistrate convicted the accused, imposing upon each a fine of $50 and costs. Subsequently the defendants obtained from the magistrate a stated case on the question whether or not the bandmaster was performing a military duty, within the meaning of the Militia Act, in parading with the regimental band on the occasion referred to. Mr. Justice McEvoy, in Chambers, dismissed the appeal from the conviction, and on further appeal by the defendants, the Ontario Supreme Court quashed the appeal, Chief Justice Mulock stating that under Section 761 *et seq.* of the Criminal Code the final decision in such a case lay with the Court of first appeal.

Rex versus Baer (Ontario) 1930, *Ontario Weekly Notes,* vol. 39, No. 4, page 89.

Payment of Salary Bonus out of "Net Profits"

The manager of a department in the business of a corporation was engaged under a contract of service which provided that his remuneration should consist of a fixed salary "plus a bonus on the net profits," such net profits to be determined after deducting all expenses incidental to the operation of the department. The contract having terminated, the employee brought an action on a contract of service in the Court of King's Bench of the Province of Quebec, contending that in the determination of the net profits no account should be taken of losses suffered by the corporation in respect of bad debts. The Court of King's Bench having given judgment in favour of the corporation, the employee appealed in the Supreme Court of Canada, which affirmed the judgment of the lower court, holding that, since the bonus was payable on the net profits, the losses accruing must be taken into consideration in the determination of such profits.

Marwood versus Canadian Credit Corporation (Quebec) 1930, *Dominion Law Reports,* Vol. 3, page 719.

Co-operators not Employees for Purposes of Compensation

A fisherman who was a member of a Fishermen's Co-operative Society in British Columbia contracted blood poisoning from handling fish while having a scratched hand. He ap-

plied to the Workmen's Compensation Board for compensation, the Association having paid assessments to the Board, and its members having contributed to the accident fund on the basis of one cent per day. In reply the Board pointed out that the fisherman, though he was a member of the co-operative association was not employed by it, and that he was entitled to apply to the Association for a return of his assessment. Mr. E. S. G. Winn, K.C., the chairman of the Board, made the following statement in regard to this case:—

"Fishing, canning, packing and manufacture of food products are enumerated among the industries coming within the scope of the Workmen's Compensation Act. When an employer engages in one of these industries, and takes workmen into his service under a contract of hiring or apprenticeship, he is required to furnish to the Workmen's Compensation Board an estimate of the probable amount of his payroll for the year, and pay assessments in respect of same.

"Workmen who enter the service of an employer whose operations come within the scope of the Act are entitled to the compensation provided under it. The relationship of master and servant must exist before there can be any assessments levied or compensation paid.

"Whether or not, in any given case, the relation of master and servant exists in a question of fact; but in all cases the relation imports the existence of power in the employer not only to direct what work the servant is to do, but also the manner in which the work is to be done.

"The relation between employer and contractor is not the same thing as the relation between master and servant. A contractor is a person, carrying on an independent business.

"To distinguish between a contractor and a servant, the test is whether or not the employer retains the power, not only of directing the work to be done, but also of controlling the manner of doing the work.

"Berry-growers and market gardeners may contract to grow and sell their product to a wholesaler, but they do not become servants of the wholesaler. The owner of a boat may contract to fish and sell his product to a cannery, but he is no more an employee or servant of the cannery than is the man who grows and sells the products of his farm to a wholesaler an employee or servant of that wholesaler. The operators of a cannery do not direct a fisherman as to when or where, or how long he must fish. The board has no authority to pay compensation unless the fisherman is an employee or servant of an employer in an industry covered by the Act."

Mr. Justice Gregory, in the British Columbia Supreme Court, recently quashed a conviction by the police magistrate in Vancouver against the proprietor of a restaurant for an alleged infraction of the Minimum Wage Act. It was charged that the accused had employed a woman in the kitchen for more than 48 hours, the weekly limit fixed by an order of the Minimum Wage Board governing occupation of women in "public housekeeping" which came into force in August, 1919 (Labour Gazette, October, 1919, page 1238). The evidence showed that the hours of the employee were not fixed, but were left to her own discretion provided she performed the work allotted to her, for which she was paid $25 a week. The Court pointed out that the contract was not for a specified number of hours, but for the performance of certain work, which, for all the Court knew, might have been performed within the hours fixed by the Board's order.

THE LABOUR GAZETTE

PREPARED AND EDITED BY
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 30] DECEMBER, 1930 [NUMBER 12

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

THE customary contraction in industrial employment in Canada was noted at the beginning of November, when the 7,406 firms furnishing employment returns to the Dominion Bureau of Statistics reported 993,817 employees, as compared with 1,002,184 on October 1. Each of these firms employed a minimum of 15 workers. Reflecting the reduction, the index, (based on the average for the calendar year 1926, as 100), declined from 116·2 in the preceding month to 112·9 on the date under review, as compared with 124·6, 118·9, 108·8, 104·0, 98·3, 94·1, 100·0, 97·0 and 91·3 on November 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. This recession was greater than the average decline recorded on November 1 of the last ten years; this was partly due to the fact that logging showed smaller gains than are usually registered at this time of year, thus failing to absorb as large a proportion as usual of the workers laid off in the other seasonal and outdoor industries. The staffs reported by employers, however, continued greater than in the autumn of other years on record, except 1929 and 1928.

At the beginning of November, 1930, the percentage of unemployment reported to the Department of Labour by local trade unions throughout Canada stood at 10·8 in contrast with unemployment percentages of 9·4 at the beginning of October and with 6·0 at the beginning of November, 1929. The percentage for November was based on the reports received by the Department of Labour from an aggregate of 1,780 labour organizations covering a membership of 207,433 persons.

Reports received from the Offices of the Employment Service of Canada during October, 1930, indicated a marked decline in vacancies and placements but a substantial increase in applicants registered, when the figures were compared with those recorded during the corresponding month a year ago. Vacancies in October, 1930, numbered 32,259, applications 67,996 and placements in regular and casual employment 31,221.

The average cost of a weekly family budget of twenty-nine staple foods was $10.25 at the beginning of November, as compared with $10.32 for October; $11.75 for November, 1929; $11.28 for November, 1928; $11.07 for November, 1927; $11.01 for November, 1926; $11.23 for November, 1925; $10.46 for November, 1924; $10.69 for November, 1923; $10.29 for November, 1922; $11.08 for November, 1921; $15.32 for November 1920; $16.92 for June, 1920 (the peak); $13.65 for November, 1918; and $7.96 for November, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 79·8 for November, as compared with 81·4 for October; 95·7 for November, 1929; 94·9 for November, 1928; 96·9 for November, 1927; and 97·7 for November, 1926.

The loss in working time caused by industrial disputes in Canada in November was greater than in the preceding month and was also slightly above the corresponding loss in November last year. Six disputes were in progress at some time during the month, involving 1,968 workers, and resulting in the loss of 13,065 working days. Corresponding figures for October, 1930, were ten disputes, 2,219 workers, and 10,397 working days; and for November, 1929, eight disputes, 738 workers, and 12,729 working days.

Quebec Compensation Act to be amended

Important announcements were made in the Speech from the Throne at the opening of the Quebec Legislature on December 2. In regard workmen's compensation it was stated that the government was willing to accede to the wishes expressed by workmen in the Province for a revision of the Act, and that the Workmen's Compensation Commission was to be directed to provide a system of collective insurance such as exists in certain Canadian provinces, "but with amendments which will make the law still more favourable to the working class."

Measures were to be taken to permit municipalities to take advantage of the federal legislation concerning unemployment. The urgency of such legislation led to the summoning of the legislature at an earlier date than usual.

It was announced that the Social Insurance Commission (LABOUR GAZETTE, November, 1930, page 1236) was engaged in the study of old age pensions and other social questions, and would soon present a report.

Farmers are to be offered substantial credits for liming and draining the land, for chemical fertilizers, and to indemnify the owners of animals that have been slaughtered owing to tuberculosis.

Unemployment Relief Act, 1930

An account of the administration of the Unemployment Relief Act, showing the appropriations authorized up to December 10, and giving an estimate of the amount of the relief so far provided, appears on another page of the present issue.

Early in December the Quebec Legislature passed the Unemployment Aid Act, 1930, to ratify an agreement that had been entered into between the Dominion Government and the Government of the Province whereby the amount appropriated to the province under the Unemployment Relief Act was fixed at $2,850,000. The agreement is similar in its terms to the agreement with the province of Ontario (LABOUR GAZETTE, November, 1930, page 1261). One section of the Quebec Act provides that "every contract made by a municipality under this Act, for the execution of works, must provide that the workmen shall receive a reasonable wage, and that the material employed be, as far as possible, of Canadian origin."

Scope of the Industrial Disputes Investigation Act

The social problems of industry, and the efforts of governments, labour and industry towards social reconstruction, are surveyed in a recent book by Professor S. Howard Patterson, of the University of Pennsylvania ("Social Aspects of Industry, a Survey of Labour Problems and Causes of Industrial Unrest." New York: McGraw-Hill Book Company). Dr. Patterson begins with a sketch of existing forms of industrial organization and of legal and political institutions in the United States, and goes on to describe in detail the various efforts made to deal with social problems—that of the state through legislation; that of organized labour through collective bargaining; and that of enlightened employers. Comprehensive programs of economic reconstruction are passed in review, including the co-operative movement, socialism and syndicalism, and finally an estimate is made of the extent of the social progress so far attained.

In his description of American institutions Dr. Patterson makes many references to parallel institutions in other countries. For example, the chapter on "Industrial Arbitration and Conciliation" includes a section outlining the provisions of the Industrial Disputes Investigation Act of Canada. As this section might leave the reader in some uncertainty as to the status of the Act in consequence of the decision of the Judicial Committee of the Privy Council (the "Haldane decision") in 1925, in the case *Toronto Electric Commissioners* versus *Snider et al*, it may be well to recapitulate the present scope of this Act. Following the decision of the Judicial Committee of the Privy Council, the question of constitutional limitation was carefully considered and amendments to the Industrial Disputes Investigation Act were drafted with the object of confining the application of the statute to matters not within the exclusive legislative jurisdiction of any province. The amendments were enacted at the 1925 parliamentary session and the statute accordingly remains applicable to industrial disputes in such enterprises as come clearly within the purview of the Dominion Parliament, these undertakings being enumerated in the amending measure as including works carried on in connection with navigation and shipping; lines of steam or other ships, railways, telegraphs, canals, ferries, and other works extending beyond any one province; works operated by aliens; works declared to be for the general advantage of Canada or for the advantage of two or more of the provinces; and works of any company incorporated by or under the authority of the Parliament of Canada. The application of the Act is also defined as extending to any dispute which the Governor in Council may in apprehended national emergency declare to be subject to the provisions of the Act, and to any dispute within the exclusive control of the provinces which is brought within the scope of the federal Act by provincial legislation. The legislatures of six of the provinces, namely, British Columbia, Saskatchewan, Alberta, Manitoba, New Brunswick, and Nova Scotia, have taken advantage of this latter provision of the Industrial Disputes Investigation Act and have enacted enabling legislation by which the terms of the federal statute are made applicable to disputes of the classes named in the Dominion law and otherwise within the exclusive legislative jurisdiction of the province.

Unemployment insurance and the Decennial Census

The Hon. Senator Robertson, Minister of Labour, addressing the Ontario Community Welfare Council at Toronto on November 20, announced that before giving consideration to the question of establishing an unemployment insurance system in Canada the Dominion Government intended to wait for the completion of the decennial census, which will be taken in June next year throughout the Dominion. It will be recalled that the House of Commons, during the session last year, adopted a recommendation of the Industrial and International Relations Committee "that in the forthcoming census provision should be made for the securing of the fullest possible data regarding the extent of unemployment and sickness, and that this should be compiled and published at as early a date as possible" (LABOUR GAZETTE, June, 1929, page 603). The Dominion Bureau of Statistics and the Department of Labour have since given attention to the form in which the questions as to employment and unemployment will appear in the census schedules, so that the replies secured by the enumerators may give a picture of conditions as they actually exist on the date of the census.

Problem of measuring unemployment

The article on "Unemployment" in the Social Work Year Book for 1929, published by the Russell Sage Foundation, points out that unemployment is now definitely recognized as being a problem of the entire community, and that it is also accepted that employers have the duty resting upon them of regularizing the operation of their plants. The importance of accurate unemployment statistics is stated in the following paragraph:—

"The difficulties in dealing with unemployment are complicated by the vagueness of existing knowledge concerning it. The number of unemployed cannot be estimated with a satisfying degree of confidence in terms of existing data. Estimates vary widely with the method of measurement used and with the definition of unemployment. An attempt to measure unemployment is faced by two alternatives: (1) indirect measurement—estimating the margin between the total supply of labour and actual employment; (2) direct measurement—counting the unemployed by means of a special census or by direct registration. In the United States, where there is no adequate continued registration of the unemployed, measures of unemployment have been derived in one way or another from statistics of employment. Although statisticians tend to confine their efforts to measuring changes in the volume of employment, this is by no means a substitute for unemployment measurement. A sharp falling off of employment in one industry may be offset by an increase of employment in another, the result being that there is no decrease of employment when both industries are considered together. Reasonably exact measurement of unemployment is needed to gauge the effectiveness of such means of control as may be devised, and to guide protective and relief programs."

It is pointed out that "wartime industrial organization has left as a legacy a better understanding of the possibilities of co-ordinated effort."

Proposed unemployment reserve fund for Canada

In his presidential address at the recent annual convention of the Union of Canadian Municipalities at Hamilton, Ontario, Mr. H. W. Cater, mayor of Brandon, dealt with the problem of unemployment in Canada. He suggested two methods by which a permanent fund might be established for the provision of relief work in Canada:—

"One would be to create a large reserve fund by setting aside a substantial amount, say twenty million dollars a year for a period of years by the Dominion Government, and invest it in safe securities, the proceeds to accumulate and when unemployment is acute use the proceeds for public works: such funds to be augmented by funds from the provincial and municipal governments. Another plan would be for the Dominion Government to issue debentures or bonds covering a long period of years and use the money for public works during periods of unemployment. When employment is normal the fund would build itself to meet the next period of depression. I would suggest the appointment of two small boards. One representing East of the Lakes and the other the West. Such boards could meet and always be ready to act as occasion demanded and would not need to be very large or expensive but should be representative."

Mr. Cater recommended that a conference of municipal, provincial, and federal representatives should be held for the purpose of divising a permanent policy for the future. Such a conference, he suggested, should draw up a program of public works to take up the slack labour due to seasonal occupations, business depressions, and other unavoidable causes of unemployment.

Among other reforms he advocated legislation to abolish dealing in futures on com-

modity exchanges and market manipulations; that old age pensions should be made operative at sixty-five years of age; and that an eight-hour day should be the standard working day for all occupations, probably with the exception of agriculture.

Influence of prices on employment

Industrial and Labour Information, the weekly publication of the International Labour Office, Geneva, in its issue for November 17, gave a table showing, as far as possible, the extent of unemployment in the various industrial countries of the world. "While the table," it is stated, "demonstrates the universal nature of the unemployment crisis and the extent to which it has worsened since last year—in many cases the figures have doubled—it also shows, when read in conjunction with figures for wholesale prices (which, unfortunately, cannot be included for want of space), that a fall in those prices has invariably accompanied a rise in unemployment. It would seem, therefore, that the monetary factor is of particular importance among the causes of the crisis. There are only two countries in which unemployment has fallen during the period covered, namely, Russia, where there has been a rise in prices due to inflation, and Latvia, where the total figures are too small for any conclusions to be drawn. In France, where there is still comparatively little unemployment, the wholesale price index has fallen rather less than in some other industrial countries, while the retail price index has actually risen. There are, of course, also a number of special causes operating at the same time, but the influence of the monetary cause is apparent. While it would be unwise to attempt any forecast, it may be added that certain signs, such for instance as the fact that the United States price level is no longer falling or is falling only very slightly, suggest that the depression is nearing its lowest point; but, unhappily, there are hardly any signs yet of a recovery."

Why no unemployment problem exists in France

France has remained practically untouched by unemployment during the crisis which has affected all the other leading industrial countries of the world. The conditions that have caused this temporary exemption from the effects of general depression were recently summed up by Mr. Franz Longville, a Belgian economist, in a statement to the newspaper *Labor* (Washington, D.C.). Mr. Longville points out that France has been able to provide steady employment not only for its own subjects, but also for a large body of foreign labour engaged in the textile, mining and other industries. He offers the following reasons for this exceptional situation.

(1) France's stationary population, deaths and a few emigrants outnumbering births, thus preventing the creation of an embarrassing labour reserve.

(2) An "ideal equilibrium" between agriculture and industry in France. One-half the population cultivates small or medium farms, not as tenants, but as owners. The other half is occupied in small or medium industrial enterprises, which produce largely for the national market. Only a few large-scale industries are directly influenced by world conditions.

(3) The fact that agriculture is "protected" as well as industry. "Some time ago, when wheat was selling in Chicago at about $2.40 a hundredweight, the French farmer was selling his wheat in Paris for approximately $6.80 a hundredweight."

(4) The French employer has refused to go into debt in order to over-expand, and the banks have encouraged him in that prudent policy. This prevents artificial boom periods.

(5) France gets the main part of the reparations paid by Germany, and while some of this has gone to Great Britain and the United States in payment of war debts, the greater part has been used in the last ten years in reconstructing the regions destroyed during the World War.

(6) The stabilization of the franc has helped export business, although it has injured people with a fixed income.

(7) The tourist industry, employing a very considerable body of workers.

Evil of maximum hiring age limits for employment

The Department of Industrial Relations of the State of California has published a special bulletin (No. 2) giving the results of an investigation into the position of the middle aged and older workers in the State. (Some earlier studies on this subject were noted in the LABOUR GAZETTE, June, 1930, page 620; May, 1930, page 549; December, 1929, page 1322; November, 1929, page 1216). Probably about two-fifths of all workers in California, it is stated, are employed in establishments having maximum age limits for beginning work. Fifty years was the limit reported most frequently. The chief causes for the existence of the practice are given as technological unemployment, business mergers and consolidations, industrial pension plans, and "personnel policies" to the prejudice of older work-

ers. Employees' welfare plans such as group life insurance, plant pensions and physical examinations are found to favour the fixing of age limits. The Department declares that this restricting rule has a demoralizing effect not only upon those who are refused employment on account of an arbitrary age limit, but upon all the workers. "The refusal to hire middle-aged and older persons is all the more deplorable in view of the fact that during the last three decades there has been a great increase in the number of such persons in the United States." Again, it is pointed out that "maximum hiring age limits, which unnecessarily shorten the productive lives and economic independence of middle-aged and older workers, are bound to lead to an effective demand for compulsory unemployment insurance, or for the lowering of the age limits under state pension plans. Industrial pension plans and group insurance plans need not preclude the employment of mentally and physically able workers. Graduated scales of contributions by employees have been worked out; so that, the older the employee, the greater is his contribution. Moreover, instead of denying employment to middle-aged persons because of existing pension plans, or group life insurance plans, such workers could be given the choice of waiving the benefits under such plans, as has been done in some industrial establishments."

Some of the arguments for retaining the older workers are grouped in the bulletin under the following heads:—(*a*) mental and physical abilities are more important than age; (*b*) middle-aged and older workers are more efficient and experienced; (*c*) middle-aged and older workers are best fitted for certain jobs; (*d*) middle-aged and older workers are steadier and reduce labour turnover; (*e*) middle-aged and older workers are less likely to injure themselves; (*f*) lack of speed of middle-aged and older workers is offset by other qualifications; (*g*) middle-aged and older workers have better judgment; (*h*) middle-aged and older workers are more faithful and reliable.

Accident liability of new employees

Safety Engineering (New York) draws attention to the need for additional "safety" measures to protect novices who are placed in positions during the present campaign against unemployment. "It is well that we do not overlook at this time the needs of safety and accident prevention. Men will be put to work at jobs that they probably have never handled before, and after a period of idleness will show a spirit of genuine interest and earnestness to do a good job from a production standpoint, and here is where safety guidance and supervision should be brought to the picture. Certainly, on with employment, but don't forget the accidents. We cannot have large bodies of men being absorbed into industrial employment, many of whom, as has been mentioned, will be new to their tasks unless we have safety and accident prevention functioning that they may work but not be hurt; for accidents are costly, unproductive and largely unnecessary."

Employers may co-operate in establishing industrial clinic

An industrial clinic where employees would be given prompt medical attention in cases of accident is likely to be established at Montreal under the auspices of the Province of Quebec Safety League, which appointed a sub-committee at a recent meeting to examine the procedure to be followed in connection with such a scheme. Mr. Arthur Gaboury, the secretary of the League, pointed out that many small firms could not provide first aid rooms and the regular services of a nurse and doctor. It was therefore proposed that a number of small firms should join forces and establish a clinic for their district, where a doctor and a nurse would be in constant attendance. An injured employee would be rushed to such a clinic in a special ambulance and there receive the required treatment. Already, he said, the firms in certain districts make a practice of joining together to carry on first aid classes under the Saint John Ambulance Association, and the proposed clinic would carry this co-operation forward another stage.

The members of the League gave full credit to the work now carried on by the hospitals, particularly in the industrial clinic maintained at the Montreal General Hospital (LABOUR GAZETTE, January, 1929, page 3; December, 1928, page 1318; June, 1928, page 723).

Need of medical supervision of industrial workers

Dr. Frank G. Pedley, of the Montreal General Hospital, speaking on the same occasion, pointed out that medical supervision of workers industry was urgently necessary in order to effect any real improvement in general adult health. "Nearly half of the population," he said, "has to accept medical charity because the worker has no time to stop work, and medical advice generally can only be obtained during the day; so he does not tell anyone of his trouble until his trouble stops him from working. Periodical medical examinations are a way of reducing mortality because it enables the disease to be found early. Visiting nurses and

services are the best way to protect adults. The worker should be followed in his home conditions. If a worker is thinking of a sick child or wife at home he cannot do his duties properly. Employers should supply a supervision of sanitary conditions and also education for employees."

Labour Code of the province of Quebec

A new edition of the "Code of Labour and Industrial Laws of the Province of Quebec," has just appeared. The 1930 edition contains several additional enactments, including the amendments made this year to the Industrial Establishment Act reducing the working hours of women and of boys under 18 years of age to 55 a week (LABOUR GAZETTE, May, 1930, page 516). The Scaffolding Act has also been incorporated, with amendments, as well as the changes relating to the Inspection of Hotels, Restaurants, and Lodging Houses Act; the Minimum Wage for Women Act, together with orders passed by the Commission; and the Workmen's Compensation Act. The Code also includes the various circulars issued by the Workmen's Compensation Commission advising those who have occasion to avail themselves of its assistance as to the procedure they should follow. A list of insurance and guarantee companies interested in the compensation law, is also given.

In addition to provincial legislation the Code contains several Dominion laws and regulations, including the Fair Wages and Eight-Hour Day Act, 1930, the Alien Labour Act and the Order in Council of 1929 prohibiting the admission of Contract Labour (LABOUR GAZETTE, August, 1929, page 844). The text of the Industrial Disputes Investigation, the Conciliation and Labour Act, the Old Age Pensions Act and Regulations thereunder are also included.

The Code is the work of Mr. Gustave Francq, who is now chairman of the Women's Minimum Wage Commission of the Province. It presents in convenient form the text of all provincial labour laws and regulations, and is a valuable work of reference for all persons who require accurate information as to the legal conditions affecting the employment of labour in the Province.

Report on Co-operative Associations in Canada

The Department of Labour recently published the third annual report on Co-operative Associations in Canada. Every known co-operative society in the Dominion is mentioned in the report, the total number of such associations being given as 1,095, with a combined membership of 690,685. Appearing first on the list is the name of the Co-operative Union of Canada, whose aim is to federate co-operative societies for mutual advantage and to propagate a knowledge of co-operative principles. The remaining associations are grouped provincially according to the phase of co-operative endeavour with which they are identified, as follows:—

1. Productive, with 73 associations and a combined membership of 57,502.

2. Marketing, 345 associations and 506,922 members.

3. Productive and Marketing, 35 associations and 7,350 members.

4. Distributive, 325 associations and 26,155 members.

5. Marketing and Distributive, 45 associations and 26,716 members.

6. Credit and Savings, 11 associations and 42,463 members.

7. Miscellaneous, 260 associations and 23,577 members.

In the productive group the largest association is the Saskatchewan Co-operative Creameries, which has a membership of 37,000. First in the marketing group is the Canadian Co-operative Wheat Producers, with a membership of 140,000, comprised in Manitoba, Saskatchewan, Alberta and Ontario Wheat Pools. This is the largest wheat marketing organization in the world. The Central Alberta Dairy Producers' Association is the largest in the productive and marketing group, having 1,800 members, and in the distributive group the British Canadian Co-operative Society, a Nova Scotia body, with 3,494 members, stands first. Of the associations in the marketing and distributive section the United Farmers' Co-operative Company, an Ontario organization, has the largest following, reporting 20,000 members. In the Credit and Savings group the Co-operative People's Banks of the Province of Quebec show a membership of 41,000 comprised in 215 local co-operative banks. The bulk of the associations included in the miscellaneous group are operating in the Province of Saskatchewan, where there are 183 societies which cannot be definitely classified, the remaining 77 associations being divided between seven other provinces.

In a summary of business transacted figures are given for 518 associations which reported, showing paid-up capital, assets, sales for the year 1929, general liabilities, profit or surplus, loss, reserve, and unapportioned profits.

Credit union movement in United States

The position of the credit union movement in the United States in 1929 is the subject of a study appearing in the *Monthly Labour Review,* November, 1930, published by the United States Department of Labour. It is pointed out that "for the average wage earner, with no banking connections and no security to offer, but urgently in need of money, the credit union appears to offer an ideal solution of the credit problem. Such a person rarely obtains help from the ordinary banking institutions. . . . . The bank, as an institution, has not reached the great body of persons with small incomes. In times of financial stress, most of these persons know of only two avenues of relief—charity and the loan shark. The credit union, however, appears to be a very successful means of meeting this situation. It is primarily for that small borrower whose need is greatest. It not only offers a welcome avenue of credit, but has an enviable record of promotion of thrift. Through the establishment of habits of regular saving—small though the savings may be—it turns thriftless, creditless, and moneyless persons into saving, stable members with good standing in the community.

"Only members of the credit union are eligible to obtain loans from it, but once a member, the applicant can obtain whatever sum he needs, at a low rate of interest. As a borrower from the credit union he is neither an exploited victim nor an object of charity. The transaction is on a strictly business basis. All members are on the same level, with the same rights and powers, and receive the same treatment. The co-operative credit society is thus absolutely democratic. It is filling real need, through simple machinery, and is doing this at very little cost (expense of operation during 1929 averaged only 1·79 per cent of the total loans granted)."

The bureau's study indicates that credit societies are generally successful and that losses from failure of borrowers to repay loans are extremely small. The effectiveness of these societies as "poor men's banks" is indicated by the growth of the movement, shown by data collected as part of the bureau's general study of the co-operative movement. In 1925, when the bureau's previous study was made, there were only 284 societies of this type in existence; by the end of 1929 the number had risen to 974. During the same period the membership has increased from 107,779 to 264,908. Their resources have more than doubled—the paid-in share capital has grown from $10,706,099 to $24,065,407 and the reserves from $973,873 to $2,079,450; the savings deposited with these societies have increased from $4,700,768 to $9,017,786. During the year 1929 the loans granted by these societies to their members reached the sum of more than $60,000,000.

Benefits of co-operation

In a radio message on co-operation recently broadcast over Radio Station WCFL, Chicago, Mr. George Keen, secretary of the Co-operative Union of Canada, cited the following example of a successful co-operative society. "A coal miner's co-operative society in Canada—the British Canadian of Cape Breton, N.S.—in twenty-three years has sold to its members merchandise of the value of seventeen million dollars, and created a net profit surplus just short of two million dollars. The coal-miners of that district have had returned to them, as consumers, one million seven hundred thousand dollars, but as holders of share capital only one hundred and fifty-one thousand dollars. In other words, as investors of share capital they only received one-thirteenth of the aggregate net profit made. As consumers they had returned to them twelve-thirteenths, and to which extent the purchasing power of their wages was increased. If Canada were socially-minded, and would apply that demonstrated fact to the whole economic life of the nation, it will be seen that unemployment, poverty and destitution would automatically disappear."

Increase in apartment building in Canada

The present tendency of building construction in Canada towards apartments rather than single houses is shown in an article by Mr. A. G. Dalzell, president of the Town Planning Institute of Canada, in the October issue of *Building in Canada.* "The tendency of the people of the working class," he says, "whether native Canadian, British immigrants, or people of foreign origin, seems to be towards living in apartment buildings, or sharing with others the houses which have been discarded by those who are building the new homes in the $5,000 to $15,000 class. Social workers and health authorities complain about overcrowding and promiscuous living, but have no solution to offer. Conditions have been found where in a nine-room house originally built as a single-family dwelling, eight families including nine children now live, and all have to share what is commonly known as a three-piece set of plumbing fixtures. This tendency is not peculiar to western Canada, is just as clearly marked in the eastern provinces, and is perhaps still more definite in the United States.

"In 1921 from the total permits for dwellings in 257 cities in the United States, amounting in all to 224,545, the percentage of single-family dwellings was 58. In multi-family dwellings the percentage was 25, and in two-family dwellings, in which are included dwellings over stores, the percentage was 17. The change in trend is remarkable because in 1928, out of a much larger number of permits, 388,678, the single-family dwelling only accounted for 35 per cent of the total, the multi-family dwelling had increased to 54 per cent, and the two-family dwelling had declined to 11 per cent. It should be noted that these figures refer to number of permits, not the number of families provided for, and whereas the single-family dwelling only provides as its name implies for one family, the multi-family apartment seldom provides for less than 10, and may provide for 100 or more.

"No city in Canada is more justly proud of its percentage of home-owners than the city of Toronto. But this new trend in housing is just as marked in Toronto as in the cities of Western Canada and the United States."

Third International conference on bituminous coal

A third international conference on bituminous coal will be held at the Carnegie Institute of Technology, Pittsburgh, Pennsylvania, in November, 1931. The purpose of the congress will be similar to that of the meetings held in 1926 and 1928, to present for discussion the results of recent studies of coal. Particular attention will be paid to the economics of the new methods and processes that are being evolved. The program will include papers on carbonization, liquefaction and gasification of coal; by-products of coal; the mechanism of combustions; cleaning of coal and its preparation for the market; pulverized fuels; power plants, and domestic heating. The discussions will be confined to coal above ground. Beginning at the mouth of the mine, however, practically every phase of distribution and consumption will be treated by outstanding authorities in the several fields.

The first conference was organized by President Baker, of the Institute of Technology in 1926 for the purpose of finding new uses for bituminous coal, and especially to discuss the problem of liquefying coal to supplement the petroleum oil supply of the world. This meeting, although it was the first of its kind to be held, attracted 1,700 scientists from thirteen different countries. Two years later followed the second congress which was broader in its scope, including discussions on pulverized fuel, low temperature carbonization of coal, rubber from coal, the hydrogenation of coal, and by-product nitrogen. Some account of the second conference was given in the LABOUR GAZETTE, June, 1928, page 566.

During November approximately 700 workmen were reported as being unemployed at Thetford Mines, out of a total of 3,500 workmen in the district. However, it was anticipated that work for two weeks in the month, commencing in December, would be provided for the unemployed by the special work undertaken by the municipality as a result of the federal Unemployment Relief Act.

The Allied Trades and Labour Association of Ottawa, at a meeting on December 5, decided to ask the Federal District Commission to have the provisions of the Fair Wages and Eight Hour Day Act, 1930, applied to the workmen employed by the Commission.

During the last session of the legislature of Manitoba, a request was received from members of the National Institute for the Blind that the provincial government petition the federal government to extend the provisions of the Old Age Pensions Act by attaching thereto a schedule that would contain provision for blind persons. The government subsequently appointed a special committee to consider the advisability of making such a request. A similar petition was presented to the Saskatchewan government in November, and it is stated that the other provinces will also be asked to co-operate in this movement.

A protest against the use of gramophone records for the purpose of radio broadcasts was made by the musicians' union at Ottawa during November to the Hon. Alfred Duranleau, Minister of Marine. Representations in favour of this practice were also made to the minister by advertising firms and other interested parties. An order was issued later by the Department requiring that all such broadcasts should be announced as being from gramophone records.

The Vocational Education Committee in the Balfour Technical School, Regina, at a meeting on November 25, decided to place liability insurance coverage against accidents on teachers engaged in the vocational classes, on the vocational day and evening students, and on the janitors of the three city collegiate institutes. This action was taken because of the possibility of accident through high speed machinery in the machine shops and the presence of gasoline on the school premises. The coverage includes about 280 day students and 600 evening students. About 15 vocational day teachers, between ten and fifteen evening vocational teachers, and eight janitors, will be covered under the liability insurance.

GENERAL REVIEW OF INDUSTRIAL SITUATION

Employment

THE employment situation throughout Canada, at the end of November, was reported by superintendents of the Employment Service of Canada to be as follows:—

In the province of Nova Scotia there was little activity in the farming industry outside of the usual preparations for winter and the repairing of farm buildings. Where fall ploughing was completed, cutting of winter wood was in progress, to be in readiness for hauling with the coming of snow. Shipment of livestock throughout the province during the past year had been particularly worth while. Fishing, with the exception of New Glasgow, where trawlers reported large fares, had been poor, owing to rough weather and the fishermen's strike at North Sydney. Work in the logging industry was very quiet, with a number of experienced woodsmen idle. Mines at Stellarton operated steady time during the week, and a large amount of coal was hoisted and shipped. Mines in other localities, worked only from two to four days a week. Manufactures of foodstuffs were reported as good; sugar refineries and cordage as fair, and mineral waters and ice cream as seasonally dull. The iron and steel industry, which had shown some depression, was improving again, with good prospects of large orders ahead and re-engagement of former employees. Highway and sewer work, as relief, was being carried on in different municipalities, while outside work in building construction was being rushed to completion and this provided employment for skilled and unskilled workers. Freight transportation was very good, but passenger traffic somewhat less than usual. Trade was fair. In the Women's Domestic Section the demand showed an increase with many placements made.

As in Nova Scotia, outdoor farm work in the province of New Brunswick was practically at a close for the season. The fishing industry reported good catches. Logging looked brighter in northern New Brunswick, as government appropriations had been made to assist lumbermen and relieve the unemployment which prevails largely among woodsmen. There was little activity to report under manufacturing, conditions for the most part in this industry being dull. Building construction was fairly active, with several large jobs well under way. A few men had also been sent out on railroad construction gangs. Trade, both wholesale and retail, was good, as was also transportation. Port work recently opened at Saint John will materially assist a large number of longshoremen and truckers in that neighbourhood. There was the usual demand for domestics and charwomen in the Women's Section.

From the province of Quebec it was reported that the number of orders for farm workers was at a minimum. Orders for bushmen were received by several of the Quebec offices, but not in the same proportion as in former years, though slightly in excess of last month. Activities among the mines remained stationary; however, at Rouyn it was expected prospecting companies would shortly start work on a larger scale. Few manufacturing concerns increased operations, while a certain number reported declines. Amongst the former, printing trades in Montreal were busier, while in that city, in a latter class, were metallurgy, cloth, tobacco and cigars. In the city of Quebec, factories, with the exception of confectionery, furs, and clothing, were operating on reduced time. Three Rivers reported increased production in the textile mills, but a noticeable diminution in paper mills. There was a decided curtailment in the building trades, orders for building tradesmen being very few in Montreal, though a large number of men were employed for the municipal works there. The city of Sherbrooke showed little activity, while Three Rivers recorded a slight increase, due to enlargement of the hospital. Transportation, except at Three Rivers, was quiet. Trade was also dull, but commercial activities in Sherbrooke were satisfactory. In the Women's Domestic Section vacancies were, for the most part, scarce and applicants numerous.

Farm orders registered at the Ontario employment offices were few and far between. The future of the logging industry is not at all bright, as lumbering operations have been reduced to a great extent by nearly all companies. Mining was exceptionally quiet. In the manufacturing industry, activitity continued at Stratford and St. Catharines. Cereal plants showed improvement at Peterborough, and textiles in other localities. Improvement in the iron and steel industries was also noted at Brantford. Actual building operations were nearing an end, but relief work of various kinds absorbed many workers, gangs of men being employed in shifts of three days or a week in the construction of sewers, watermains, subways, highways, etc. The demand for women domestic workers showed a slight falling off, and difficulty was experienced in obtaining casual work for the many applicants on hand.

Orders for farm workers in the province of Manitoba showed an increase with no scarcity of applicants for winter farm work, but wages offered were very low. There was no prospect of work in the logging industry, with the exception of employment for a few cordwood cutters. Manufacturing was reported as fair. Operations still continued at the Flin Flon mines. Building construction was at a low ebb, but under the provincial unemployment

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep and hogs; storage holdings of butter and cheese.

relief scheme, work on highways, sewers, water-mains and in wood camps was absorbing a large number of men, who otherwise would have been unemployed. Wholesale trade was fair, while retail trade showed some improvement. Conditions in the Women's Domestic Section were very quiet, with plenty of applicants available.

Farming in the province of Saskatchewan showed a decline, with the exception of Prince Albert, where the efforts of the Soldiers' Settlement Board had been effectual in making increased placements, though these were at a low rate of wage or for board only. Men had been sent to bush work in Government relief camps, but outside of this, logging was quiet. Coal mines were working part time only, with reduced staffs and no placements were effected. Building construction was quiet, but relief work on pipe lines, water-mains, sewers and highways was being carried on. Orders for all classes of female help were slow, with plenty of available applicants. Day work for women was exceptionally scarce.

The demand for farm workers in the province of Alberta was small, with plenty of applicants on the waiting list. Farmers, in some districts, were on relief work themselves and quite unable to take men, even for board alone. Logging, owing to weather conditions was practically at a standstill. Business was slack at the coal mines which were operating on reduced time, while a surplus of miners and mine labourers prevailed. All classes of construction were about completed, and a large number of tradesmen unemployed. Railroad construction was also quiet. Relief work on sewers, etc., was provided for those out of work in some localities, and was about the only construction of any kind in progress. The situation in the Women's Domestic Section was very quiet, with sufficient applicants to meet any demand.

In the province of British Columbia, due to mild weather, work on the land still continued, but fruit packing houses had closed for the season, or would soon do so. Conditions in the logging industry were very quiet, with few orders received and equally few men sent out, though contracts for ties were expected shortly, which would provide work for a number of men. Metal mining showed no activity, but coal mines, near Nanaimo, were working regularly. There was, however, a great surplus of mine labourers. Factories were working with less than normal crews, and mills were running, for the most part, on short time. Building construction, while very far from showing normal activity, provided work for many local tradesmen. The greater part, however, of construction in progress, was that provided for highways, water-mains, sewers, pipe lines and in wood cutting camps, by the various municipalities for relief of the unemployed. Work was available for regular employees at the shipyards and drydocks, but the waterfronts were quiet. In the Women's Domestic Section, many clerical workers were unemployed, the only positions listed being for domestics and these orders were easily filled. General conditions throughout the province were far from favourable, with little prospect of improvement for some time.

EMPLOYERS' REPORTS.

Employment at the beginning of November showed the customary seasonal contraction, but this involved a larger than average number of workers. Despite the unusually pronounced reduction, the staffs reported by employers were larger than on November 1 in any other of the last ten years except 1929 and 1928. The Dominion Bureau of Statistics tabulated statements from 7,406 employers, whose payrolls were reduced from 1,022,184 persons on October 1, to 993,817 at the beginning of November. Reflecting this decrease, the index number (with the average for the calendar year 1926, as the base equal to 100), declined from 116·2 in the preceding month to 112·9 on the date under review, as compared with 124·6, 118·9, 108·8, 104·0 98·3, 94·1, 100·0, 97·0 and 91·3 on November 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

The trend was downward in all provinces, the greatest losses taking place in Ontario and British Columbia. In the Maritime Provinces, there was a decrease on November 1, most of this taking place in construction and manufacturing. In Quebec, highway and building construction, manufacturing and transportation registered curtailment, but railway construction, trade and logging reported improvement. In Ontario, employment again declined; the most extensive recessions were mainly of a seasonal nature in construction, transportation, canning, saw-milling and iron and steel plants, while textile factories, logging and retail trade were decidedly busier. In the Prairie Provinces, coal and metallic ore mining and retail trade were much more active; on the other hand, manufacturing, construction, transportion and services showed contractions. In British Columbia the greatest losses were in manufactures and construction, but transportation and services were also slacker. Coal mining, on the other hand, was rather more active.

Additions to staffs were registered in Windsor and the Adjacent Border Cities, while in Montreal, Quebec City, Toronto, Ottawa,

Hamilton, Winnipeg and Vancouver there were reductions. In Montreal, manufactures as a whole, transportation, construction, and services reported reduced activity, while there were seasonal gains in retail trade; within the manufacturing group, there was also improvement in textile, musical instrument and lumber plants. In Quebec City, transportation, services and manufacturing showed curtailment, while construction and trade reported slightly more activity. In Toronto, most of the decline was in construction, transportation and services, while manufacturing and trade were rather busier. In Ottawa, almost all the curtailment was reported in manufacturing, construction and transportation, but retail trade showed slightly greater activity. In Hamilton, most of the decline took place in manufactures, particularly in iron and steel, food and electrical apparatus plants, while textiles and non-ferrous metals showed improvement. In Windsor and the adjacent Border Cities, improvement was reported in automobile plants and highway construction. In Winnipeg, trade and building reported gains, but manufacturing and transportation released help. In Vancouver, construction, transportation and manufactures showed most of the reduction, while trade and highway construction were more active.

Further shrinkage of a seasonal character was noted in manufactures, chiefly in the lumber and food-canning industries, although there were also losses in iron and steel, pulp and paper, building material, electric current, leather, electrical apparatus, non-ferrous metal, rubber and non-metallic mineral works. On the other hand, textile factories registered considerable advances, and there were smaller gains in musical instrument and chemical plants. There were also large increases in logging, mining and trade, but construction and maintenance, transportation and services showed decided losses, mainly seasonal in character.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of November, 1930.

TRADE UNION REPORTS.

The situation among local trade unions at the close of October declined slightly from the previous month, the 1,780 labour organizations from which reports were tabulated with 207,433 members, showing 10·8 per cent of idleness contrasted with 9·4 per cent in September. Employment was also reduced from October of last year when 6·0 per cent of the members reported were without work. The percentages of unemployment recorded in all provinces except Nova Scotia exceeded to a moderate degree those registered for September, while in Nova Scotia the expansion shown was slight. The depression indicated in comparison with October of last year was located chiefly in the Provinces of Quebec and Ontario, though in Saskatchewan, Alberta, British Columbia, Nova Scotia and New Brunswick also some falling off in available employment was noted. Manitoba unions, however, reported a fractional gain in activity.

An article elsewhere in this issue gives in some detail the unemployment situation as reported by trade unions on October 31, 1930.

EMPLOYMENT OFFICE REPORTS.

During the month of October, 1930, the offices of the Employment Service of Canada referred 32,874 workers to positions and effected a total of 31,221 placements. Of these, the placements in regular employment were 14,128 of which 10,288 were of men and 3,840 of women. Placements in casual work numbered 17,093. Employers notified the Service of 32,259 vacancies of which 22,793 were for men and 9,466 for women. Applications for work were received by the offices from 52,828 men and 15,168 women, a total of 67,996 A decline was noted in vacancies listed and placements effected when the above figures were compared both with those of the preceding month and also with the records of October, 1929, but there was a pronounced increase in the registration of applicants under both comparisons, the reports for September, 1930 showing 35,668 vacancies offered, 56,746 applications made and 33,368 placements effected, while in October, 1929, there were recorded 37,703 vacancies, 51,678 applications for work and 36,066 placements in regular and casual employment. A report in detail of the work of the offices for the month of October, 1930, will be found elsewhere in this issue.

BUILDING PERMITS AND CONTRACTS AWARDED.

According to the monthly report prepared by the Dominion Bureau of Statistics the value of permits issued in 61 cities during October, 1930, was $12,723,789 as compared with $11,081,706 in the preceding month and with $18,073,378 in October, 1929

According to the *MacLean Building Review*, construction contracts for November exceeded those for October by 18 per cent. Close to $40,000,000 worth of new work was awarded during the month. With one month to come, construction up to the end of November stood 20 per cent below that of 1929 and building construction alone 27 per cent below. Of the above total, $15.273,000 was for business buildings; $12,503.300 was for Engineering purposes; $9,205,000 was for resi-

dential buildings, and $2,329,200 was for industrial purposes. The apportionment of the contracts awarded during October, by provinces, was as follows: Ontario, $19,646,300; Quebec, $10,139,600; Saskatchewan, $2,950,100; British Columbia, $2,017,500; Alberta, $2,013,100; New Brunswick, $1,455,400; Manitoba, $1,027,600; Nova Scotia, $35,300; Prince Edward Island, $25,600.

Production and Trade

INDUSTRIAL PRODUCTION.

Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year, are shown in the table on page 1374.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that business operations were uneven in Canada during October, a number of striking gains being counterbalanced by recession in other directions. Activity in manufacturing plants was nearly maintained at the level of the preceding month. The gain in newsprint production was considerably greater than normal for the season, an output of 213,817 tons comparing with 195,490 tons in September. The gain in employment in the industry on November 1, after seasonal adjustment, was more than 7 per cent. The production of Canadian mills for the first ten months of 1930 amounted to 2,111,381 tons, a decline of 132,201 tons or 6 per cent from the same period of 1929. For the ten months ended with October, mills in the Dominion operated at 70·4 per cent of capacity as against 84·8 per cent in the corresponding ten months of the preceding year. Judged by employment records on November 1 operations in the primary iron and steel industry were at a lower level, and the reduction in the output of pig iron from 48,395 tons in September to 40,079 tons in October was an element of the recession. Steel mills were more active, the output of steel ingots and castings being 65,431 tons compared with 55,808 tons in the preceding month. This output exceeded by 17 per cent the year's low reached in September and marked the first upturn in the seven months since the record for this year was established in March at 117,487 tons. For the first ten months of this year the production of steel ingots and castings totalled 876,282 tons as against 1,203,625 tons and 1,028,697 tons made during the corresponding periods of 1929 and 1928 respectively. The same four blast furnaces were in operation on October 31 as on September 30 and were located at Sydney, Hamilton, Port Colborne and Sault Ste. Marie. These four furnaces had a capacity of 1,750 long tons per day or about 41 per cent of the total capacity of all iron blast furnaces in Canada.

The production of automobiles reached a low point in October, the output dropping to 4,541 cars and trucks compared with 7,957 in the preceding month. The output of October is normally 6·8 per cent less than in the preceding month, according to a calculation based on the records of monthly production since 1919. The output normally recedes further in November, reversing the trend with an increase in December. Judged by the employment record at the beginning of November, indicating after seasonal adjustment a gain of 6 per cent preparations were being made for a revival in production at an earlier date than would be indicated by the experience over a term of years.

An importation of 12,700,000 pounds of raw cotton in October and a gain of nearly 6 per cent after seasonal adjustment in the thread, yarn and cloth division, indicates improved conditions in the textile industry. The imports of raw cotton in September were 5,500,00 pounds, and the gain in October, after seasonal adjustment, was no less than 77 per cent. The purchase of raw materials in greater amount than in the same month of 1929 indicates preparation for more active operations than have been in evidence for some time. It is also significant that employment in the manufacture of hosiery and knit goods on November 1 showed a gain of 3 per cent after seasonal adjustment. While the textile industry has been operating at a depressed level for some time, it has been one of the first to show definite improvement.

The mining industry, according to preliminary indications, showed some contraction in the base metal division. Shipments of gold to the Royal Mint and external markets amounted to about 187,700 ounces, compared with 158,700 ounces in the preceding month, a gain of 18 per cent. The output of coal amounted to 1,630,000 tons compared with 1,230,000 in the preceding month. A gain is normal for the season, but it is noteworthy that the output in Ottawa was greater than in the same month of last year, when 1,560,000 tons were produced. Coal production during the month reached a high level due principally to the advance in the production of lignite coal in Alberta and to a lesser extent in Saskatchewan. The output from mines in Nova Scotia was 589,784 tons; in New Brunswick, 16,701 tons; in Saskatchewan, 89,289 tons; in Alberta, 751,459 tons; and in British Columbia, 182,780 tons. Bituminous coal mined during October totalled 949,076 tons; Sub-bituminous coal, 73,673 tons; and lignite coal, 607,264 tons.

EXTERNAL TRADE.

A summary of Canadian trade by the Department of National Revenue, shows that in October, 1930, the merchandise entering Canada for consumption amounted to $78,358,351 as compared with $87,900,201 in the preceding month and with $116,271,197 in October, 1929. The chief imports in October, 1930 were: Non-metallic minerals and products, $15,870,791; Iron and its products, $13,562,685; Fibres, textiles and textile products, $10,756,095.

The domestic merchandise exported during October, 1930 amounted to $82,781,428 as compared with $81,046,227 in the preceding month and with $119,265,558 in October, 1929. The chief exports in October, 1930, were: Agricultural and vegetable products, mainly foods, $32,505,653; Wood, wood products and paper, $20,991,775; Animals and animal products, $8,413,686.

Strikes and Lockouts

The time loss due to industrial disputes in Canada in November, 1930, was appreciably greater than that occurring during October, 1930, although the number of workers involved showed a small decline, the increase being due largely to two strikes in Nova Scotia, one involving over a thousand coal miners for several days and the other several hundred shore fishermen for over a week. As compared with November, 1929, the figures for November, 1930, show that, while fewer strikes occurred than a year previously, nearly three times as many workers were involved. The time loss, however, showed only a slight increase over the same month last year during which a strike involving several hundred pulpwood workers in Northern Ontario caused 10,000 days' time loss. There were in existence during the month six disputes, involving 1,968 workers, and resulting in a time loss of 13,065 working days, as compared with ten disputes involving 2,219 workers and resulting in a time loss of 10,397 working days in October, 1930. In November, 1929, there were on record eight disputes, involving 738 workers and resulting in a time loss of 12,729 working days. At the end of the month there were four disputes recorded as strikes or lockouts, involving approximately 600 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off or lapsed.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities continued toward lower levels, being $10.25 at the beginning of November, as compared with $10.32 for October; $11.75 for November, 1929; $11.28 for November, 1928; $11.07 for November, 1927; $11.01 for November, 1926; $11.23 for November, 1925; $10.46 for November, 1924; $10.69 for November, 1923; $10.29 for November, 1922; $11.08 for November, 1921; $15.32 for November, 1920; $16.92 for June, 1920 (the peak); $13.65 for November, 1918; and $7.96 for November, 1914. Of the twenty-nine items in the food budget twenty were lower in price, the most important of these declines being in beef, mutton, pork, cheese, bread, flour, rolled oats, beans, prunes and potatoes. Seasonal increases occurred in the prices of eggs, milk and butter. Including the cost of fuel and rent with that of foods the total budget averaged $20.60 at the beginning of November, as compared with $20.68 for October; $22.03 for November, 1929; $21.52 for November, 1928; $21.27 for November, 1927; $21.24 for November, 1926; $21.51 for November, 1925; $20.81 for November, 1924; $21.19 for November, 1923; $20.89 for November, 1922; $21.60 for November, 1921; $26.13 for November, 1920; $26.92 for July, 1920 (the peak); $21.61 for November, 1918; and $14.36 for November, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, continued downward, being 79·8 for November, as compared with 81·4 for October; 95·7 for November, 1929; 94·9 for November, 1928; 96·9 for November, 1927; and 97·7 for November, 1926. In the classification according to chief component materials five of the eight main groups were lower, two were higher and one was unchanged. The groups which declined were: the Vegetables and Vegetable Products group, due to lower prices for grains, flour, bran, shorts and bread, which more than offset higher prices for rubber, granulated sugar, coffee and hay; the Animals and their Products group, because of reduced quotations for canned salmon, hides, leather and hogs; the Iron and its Products group, due mainly to lower quotations for steel plates, black steel sheets, scrap steel and car axles; the Non-Metallic Minerals and their Products group, due to declines in the prices of brick, crude oil, gasoline, kerosene and asbestos; and the Chemicals and Allied Products group, due to lower prices for arsenious oxide, litharge, potassium iodide and camphor gum. The Wood, Wood Products and Paper group was slightly higher, mainly because of higher prices for ground wood pulp. The Non-Ferrous Metals and their Products group was also slightly higher, due to increased prices for copper, copper sheets, copper wire bars, brass sheets, lead, silver, tin and zinc. The Fibres, Textiles and Textile Products group was unchanged.

STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1930

THE number of strikes and lockouts in existence in Canada during November, 1930, was six, as compared with ten the preceding month. The number of workers involved showed a small decline, but the time loss for the month was appreciably greater than that occurring in October, the increase being due largely to a strike of coal miners in Nova Scotia involving over one thousand workers for several days, and to the strike of some five hundred fishermen who were out for some time in Cape Breton Island. As compared with November, 1929, the figures for November, 1930, show that, while fewer strikes occurred than a year previously, nearly three times as many workers were involved. The time loss, however, showed only a slight increase over the same month last year, during which a strike involving several hundred pulpwood workers in Northern Ontario caused 10,000 days' time loss.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Nov., 1930	6	1,968	13,065
*Oct., 1930	10	2,219	10,397
Nov., 1929	8	738	12,729

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Two disputes, involving approximately 116 workers, were carried over from October, and four disputes commenced during November. Two of these disputes terminated during the month, one settlement being in favour of the workers and the other in favour of the employer. At the end of November, therefore, there were on record four disputes recorded as strikes or lockouts, as follows: Hosiery factory workers, Guelph and Mount Dennis, Ont.; ornamental iron workers, Vancouver, B.C.; fishermen, North Sydney and district, N.S.; and sash and door factory workers, Vancouver, B.C.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to four such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926, one employer; photo engravers, Toronto, Ont., January 7, 1929, one employer; motion picture projectionists, Vancouver, B.C., June 23, 1930, one employer; and bakery drivers, Saskatoon, Sask., September 22, 1930, one employer.

A minor dispute involving employees on relief work in the County of York, Ont., about November 21, 1930, has been reported. About ten men ceased work, demanding 50 cents per hour which they claimed was the township rate instead of 35 cents per hour as paid by the road commission. They were immediately replaced by other men sent by the relief office. Proposals were made in the County Council that the commission should be asked to pay the regular township rate in any township where work was being carried on, but as the County Council had no jurisdiction no action was taken.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

HOSIERY FACTORY WORKERS, GUELPH, ONT.—As stated in the last issue of the LABOUR GAZETTE, employees in two establishments operated by one company at Guelph, Ont., and Mount Dennis, near Toronto, Ont., manufacturing silk hosiery, ceased work on October 30, 1930, protesting against reductions in wages, piece rates. The reductions were reported by the representative of the strikers to be from 17½ per cent to 28½ per cent, but a detailed statement furnished by the employer showed that the reductions range from 9 per cent to 27 per cent, most of the changes being between 15 per cent and twenty-five per cent. The number of employees who ceased work on October 30 or immediately after is reported at about sixty in Guelph, about twenty-eight being indirectly affected, and about fifty at Mount Dennis where 133 were indirectly affected. At the request of the union, the American Federation of Full Fashioned Hosiery Workers, affiliated with the

United Textile Workers of America, a conciliation officer of the Department took the matter up with the representatives of both parties. The management stated that owing to the drop in the prices of hosiery it had become necessary to curtail operations or to reduce costs, and finally it had been decided to reduce the piece rates for classes earning over $20 per week, particularly those employees earning from $50 per week to $70 per week. The company, therefore, felt unable to make any concessions to the strikers and keep the factory in operation. The management also stated that it was unable to accept the suggestion of the conciliation officer that the dispute should be referred to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act or to meet the representatives of the union. The conciliation officer reported the result of his efforts to the international representative of the union and to committees of the strikers from both plants. At the beginning of the dispute the company had undertaken to reinstate the strikers as needed in order of seniority, but later, when other employees had been given certain positions, stated it would not be possible to do this, but that such employees would be re-engaged as soon as business warranted it. A small number of the employees secured work with other firms and the company reported that a number of strikers had applied for reinstatement. At the end of the month the union reported that seventy-five of the strikers were still involved in the dispute.

FISHERMEN, NORTH SYDNEY AND VICINITY, N.S.—Shore fishermen at North Sydney, N.S., ceased work on November 16, 1930, at the beginning of the shore fishing season (which lasts for six weeks) demanding a higher price for fish. Negotiations were carried on between the parties with the assistance of the President of the local Board of Trade, officials of the Fisheries Department, etc. The dispute arose from the demand of the fishermen for the same price for fish as that paid at Halifax, the fish buyers stating that owing to the difference in freight rates to Montreal they could not pay so high a price. The secretary

STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1930

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress Prior to November, 1930.			
MANUFACTURING—			
Textiles—			
Hosiery factory workers, Guelph, Ont., and Mount Dennis, Ont.	110	2,000	Commenced Oct. 30, 1930; against reduction in wages; unterminated.
Iron, Steel and Products—			
Ornamental iron workers, Vancouver, B.C.	6	125	Commenced Oct. 16, 1930; for increase in wages; unterminated.
(b) Strikes and Lockouts Commencing during November, 1930.			
FISHING AND TRAPPING—			
Shore fishermen, North Sydney and district, N.S.	500	5,000	Commenced Nov. 16, 1930; for increase in rates for fish; unterminated.
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, New Aberdeen, N.S.	1,300	5,200	Commenced Nov. 11, 1930; against employment of miner expelled from union; terminated Nov. 14, 1930; in favour of workers.
MANUFACTURING—			
Saw and Planing Mill Products—			
Sash and door factory workers, Vancouver, B.C.	32	700	Commenced Nov. 3, 1930; against reduction in wages; unterminated.
Other Metal Products—			
Electric winders and insulators, Brantford, Ont.	20	40	Commenced Nov. 7, 1930; against reduction in wages; terminated Nov. 8, 1930; in favour of employer.

of the organization to which the fishermen belonged, the United Maritime Fishermen, requested the Minister of Labour to appoint a Board of Conciliation under the Industrial Disputes Investigation Act, but was informed that under the statute this could be done only on receipt of a joint application from both parties to the dispute. Proposals were made to have the transportation rates adjusted by the Board of Railway Commissioners. During the dispute the market prices of fish on the Atlantic coast declined, but the fish buyers at North Sydney agreed to pay the same price as offered at the beginning of the season. Fishermen at other points in Cape Breton Island joined in the dispute soon after its beginning, bringing the total number reported as affected to between 500 and 1,000. About 125 fish handlers at North Sydney were indirectly affected. At the end of the month the dispute was unterminated, but early in December a settlement was reached, the fish buyers agreeing to increase the price of market cod by one-quarter cent per pound and to reduce the price for bait.

COAL MINERS, NEW ABERDEEN, N.S.—Coal miners employed in one colliery at New Aberdeen, in the Glace Bay district of Cape Breton Island, ceased work on November 11, 1930, demanding the dismissal of a miner who had been expelled from the union because he raised the rent of a house which he had purchased from the coal mining company. A resolution adopted by the District Convention of the coal miners' union in 1927 provided that any member of the union who purchased a house from the company and charged a fellow worker a higher rent than formerly paid should be expelled from the union. It was reported that the right of a landlord to raise the rent for a new tenant has been recognized, and that the offending miner had made some repairs to the house at the request of the tenant, but that when summoned before a union meeting to explain his action he neglected to attend. As the result of negotiations between the representatives of the union and the company, assisted by the Minister of Mines for Nova Scotia, it was arranged that the offending miner should be dismissed, and work was resumed the day following.

SASH AND DOOR FACTORY WORKERS, VANCOUVER, B.C.—On November 3, 1930, employees in one establishment ceased work against a reduction in wages of approximately ten per cent. An agreement between the carpenters' union and the mill owners' association had terminated on October 28, 1930, and while negotiations had not resulted in a new agreement, the other mills did not make any reduction in wages. The employer concerned reported that the strikers were replaced, but at the end of the month no termination had been reported.

ELECTRIC WINDERS AND INSULATORS, BRANTFORD, ONT.—As the result of a reduction in wages of three cents per hour from the scale of 24 cents, 27 cents and 36 cents per hour, 44 hours per week, twenty out of twenty-two women employed in one establishment ceased work on November 7, 1930. The management partially replaced the strikers, but stated that their former employees would be re-engaged as needed. At the end of the month a small number of the strikers had returned to work, some had secured work elsewhere, and the dispute is, therefore, recorded as lapsed.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1930, in the review of Strikes and Lockouts in Canada and Other Countries, 1929. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

Great Britain

The number of disputes reported as beginning in October was 26 and 12 were still in progress from the previous month, making a total of 38 disputes in progress during the month, involving 5,900 workpeople and resulting in a time loss of 41,000 working days. Of the 26 disputes beginning in October, 7 were over proposed reductions in wages, 13 on other wages questions and 6 on other questions. Settlements were reached in 23 disputes, of which 5 were in favour of workpeople, 12 in favour of employers and 6 ended in compromises. In 4 other disputes, work was resumed pending negotiations.

A strike of 90,000 miners in Scotland lasted from December 1, to December 6. The new

Coal Mines Act providing for the 7½-hour day to replace the 8-hour day came into effect on December 1, but the owners insisted on the spread-over system by which the 90-hour fortnight should consist of 10 eight-hour shifts and two 5-hour shifts. The miners demanded a straight 7½-hour day. It was decided on December 6 to resume work pending further negotiations.

Germany

The strike of 126,000 metal workers at Berlin which took place in October against a reduction in wages of 8 per cent was mentioned in the LABOUR GAZETTE, November. As stated there, work was resumed pending arbitration. The government arbitration board decided in November that wages would be reduced three per cent on November 17 and a further five per cent on January 19.

Spain

During October and November a series of general strikes occurred in Madrid, Barcelona and other cities, which were apparently largely of a political nature.

British India

During the second quarter of 1930, the number of disputes reported was 53, involving 87,550 workpeople and resulting in a time loss of 506,345 working days.

United States

The number of disputes beginning in September was 66, and 48 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 13,970 and the time loss 203,126 working days for the month.

The strike of 4,000 textile workers at Danville, Virginia, which began on September 30, and was reported in the LABOUR GAZETTE for October and November continued during November. Several times disorders took place and on November 27, the militia were called out to preserve order.

Factory Legislation in China

A Factory Bill has been drafted by the Ministry of Industry, Commerce and Labour of the National Government of China and submitted to the Legislative Council. An English translation of this measure has appeared recently in a booklet issued by the Chinese Minister of Industry, Nanking, together with the texts of the Trade Union Act and the Trade Disputes Act of 1928 as amended early in 1930.

Industrial and Labour Information, the weekly publication of the International Labour Office, in its issue of November 10, gives the following summary of the chief provisions of the Factory Act as promulgated.

The Factory Act applies to all factories driven by steam, gas, electricity or water power, regularly employing thirty or more workers. Every such factory is required to keep records containing data relating to each worker (including his hours of work and wages) and to cases of sickness or accident, such records to be submitted every six months to the municipal or district authorities.

The Act contains provisions that child labourers over fourteen but under sixteen years of age may perform light and easy work only and that children under sixteen may not be employed in certain dangerous occupations. The dangerous occupations scheduled as closed to child workers are also closed to female workers. Child labourers under sixteen may in no circumstances be employed for more than eight hours daily or at night between 6 p.m. and 7 a.m. All factories are required to provide not less than 10 hours' supplementary education weekly for child labourers and apprentices at the cost of the undertaking.

The regular working day for adults is 8 hours, but it may be extended up to the limit of 10 hours to meet varying local conditions or special requirements of the work. A compulsory rest of 30 minutes must be granted to all workers after every 5 hours' continuous work and all workers must be granted one day of rest in each period of 7 days. Further, all workers are to be granted a period of annual leave varying from 7 to 14 days, according to their length of service.

With regard to wages, the minimum wage rate is to be based on local conditions and standards of living, female workers to be paid the same rate of wages as male when performing the same kind of work with equal efficiency. Overtime is to be paid for at from one-third to two-thirds more than the ordinary hourly rate.

Other provisions of the Act relate to safety and health; workmen's compensation; works councils and apprenticeship.

OLD AGE PENSIONS IN CANADA

Statistical Summary of Administration During Third Quarter of 1930 and Since Inception of the System

THE accompanying table gives particulars of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) and the various provincial concurrent Acts, during the third three months of 1930, and since these Acts became severally effective. Similar tables, bringing the statistics down to June 30, 1930, were given in the LABOUR GAZETTE, October, 1930. Two new columns have been added to the present tables, one showing the average monthly pension for each province, and the other showing the percentage of persons over 70 years of age to the total population in each province. The text of the Old Age Pensions Act was given in the issue for April, 1927, page 375. It makes provision for the establishment of a Dominion Provincial pension system to be effective in such provinces as have enacted special legislation for this purpose. These provinces are British Columbia, Alberta Saskatchewan, Manitoba, and Ontario. The New Brunswick Legislature passed an Old Age Pensions Act at its session this year, to become effective on its proclamation by the Lieutenant Governor in Council. The final report of the Nova Scotia Commission on Old Age Pensions was outlined in the LABOUR GAZETTE, May, 1930, and the question of participating in the system is still under consideration in that province.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as $365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is $240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds $125 a year. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments. The Department of Labour of Canada pays quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding three months.

FINANCIAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT SEPTEMBER 30, 1930

	Alberta	British Columbia	Manitoba	Ontario	Saskatchewan	North West Territories	Totals
	Act effective Aug. 1, 1929	Act effective Sept. 1, 1927	Act effective Sept. 1, 1928	Act effective Nov. 1, 1929	Act effective May 1, 1928	Order in Council effective March 1, 1929

Old Age Pensions in New York State

An old age pensions law was adopted this year by the New York State legislature, and payments to pensioners will begin on January 1. The law authorizes county and city public welfare districts to administer "relief" to persons seventy years of age and over: (1) who are United States citizens, (2) who have been residents of the state for ten years and of the district for one year immediately preceding application, (3) who are unable to support themselves either in whole or in part, (4) who have no children, or other person able and required by law to support them, and (5) who are neither in institutions nor in need of institutional care.

The amount and nature of the relief which any pensioner may receive, and the manner of providing it, are determined by the public welfare official, with due regard to the conditions existing in each case, in accordance with the rules and regulations made by the State department. Relief may include among other things, medical and surgical care and nursing. The cost of carrying out the provisions of this law are to be borne in the first instance by the city or county welfare district. Half of the amount expended for relief and for the travelling expenses of district welfare officials will, however, be reimbursed by the State, together with half of such other district expenses as may be allowed.

Already a movement for the reduction of the pensionable age from 70 to 65 years has been begun by the New York Permanent Conference on Old Age Security, which has forwarded a resolution to Governor Roosevelt in the following terms:—

"Whereas, one of the most effective ways of alleviating the present unemployment situation is by taking out from the breadlines and the ranks of the unemployed elderly persons whose chances to find a job are practically hopeless, and, whereas a reduction of the qualifying age limit under the New York old age assistance law from 70 to 65 would remove about 20,000 persons from the breadlines: Therefore, be it resolved, that the New York Permanent Conference on Old Age Security, representing over 300 organizations in the city of New York, urge the Governor and the legislative leaders to do everything in their power to reduce the age limit from 70 to 65."

MOTHERS' ALLOWANCES IN ONTARIO

AT the annual convention of the Union of Canadian Municipalities, held recently at Hamilton, Dr. D. Jamieson, chairman of the Old Age Pensions Commission and of the Mothers' Allowances Commission of Ontario, contributed an address in which he explained the work of both these Commissions (Details of the working of the Mothers' Allowances Act in 1929 were given in the LABOUR GAZETTE, June, 1930, page 667). Speaking of mothers' allowances Dr. Jamieson spoke in part as follows:—

"The administration of the Act is under the control of a Commission consisting of five members of whom two must be women. Then we have twenty-one investigators, each having a defined district with about three hundred families, each of whom they visit regularly and exercise careful supervision over them and advise them in proper feeding, clothing and caring for the children and obtaining evidence that they are in regular attendance at school if of school age. Another thing we insist on is that the moral atmosphere of the home is such as to conduce to the children not being brought into contact in the home with conduct or associations that will lower the standard of their value as good citizens.

"In every county, city and separated town there are local boards of five members, of whom two are appointed by the municipality and three by the government. These are chosen from our best citizens, and give their services free of charge, except necessary travelling and hotel expenses when attending meetings, and they receive and consider all applications before sending them on to the Commission for final action.

"The allowance is given only to mothers who have at least two children under sixteen years of age with an extra five dollars per month for each child in excess of two. The basic grant for two children in cities is $40, in towns of over 5,000 population, $35, and in counties and smaller towns and villages, $30, with the increase of $5 for each additional child in every case. These payments may be reduced on account of the equity in property or liquid assets of the applicant, or on account of the personal earnings of her children over sixteen years of age.

"The monthly allowances are paid in full by the Provincial Treasurer, on the order of the Commission, and we charge back and collect 50 per cent by monthly accounts from each municipality except in the unorganized dis-

tricts in Northern Ontario where the Government assumes the full allowances. The cost of administration, amounting to about $75,000 per year, is also paid by the Government."

The total amount paid out last year was approximately $2,250,000. The number of beneficiaries on the paylist was 5,434, including 3,691 widows, 359 desertion cases, 204 foster mothers, etc.

"The best evidence," Dr. Jamieson concluded, "that this Act is working out in a satisfactory manner and accomplishing the purpose for which it is intended is that we have practically no complaints from any source, and all the municipalities are willingly and cheerfully contributing their share promptly when they receive their monthly accounts. If any evidence should be needed as to the results and benefits obtained by the beneficiaries, we have on our files hundreds of letters testifying in the most grateful and thankful manner as to the help which has been afforded them and how they have been enabled to give their children a start in life that will fit them to become good citizens and a credit to the community which has made it possible for the mother to carry on."

Old Age Pensions

Dealing with the work of the Old Age Pensions Commission, Dr. Jamieson described the procedure followed in the province in connection with the payment of such pensions, concluding as follows:—

"The short experience which we have had with the administration of the Act in the Province of Ontario, where it has been in effect only since November 1, 1929, has been very satisfactory, and when it is considered we have had about 35,000 applications to deal with, and have already over 32,000 pensioners receiving monthly cheques, with practically no complaints or criticism from any source, we should certainly feel we have the machinery of the Act in smooth and satisfactory working order. The new outlook on life and the increased comfort and feeling of independence which it has given to many of our old indigents has already justified the enactment of this legislation, and we feel amply repaid for the trouble and cost which it has entailed on the public funds.

"No doubt the representatives of the different municipalities will be interested in estimating the cost placed on them by the amount they are obliged to contribute towards the allowances paid under these two Acts, and I would just point out the fact that if the Government did not grant assistance to needy mothers with dependent children they would become a charge to the full extent on the local municipality in which they are residents—and such assistance would not be given under such strict supervision and control as under the Mothers' Allowances Act with our trained and efficient staff of investigators, and the results obtained would not be so satisfactory.

"The same applies to old age pensioners who would be a municipal liability when they become unable to maintain themselves, and as the Dominion and the Province contribute 80 per cent the municipality is only called upon for 20 per cent of the pension. In the case of inmates of houses of refuge or other institutions, the pensioners are obliged to assign their pension to the institution, and the cities and counties are therefore relieved to a large extent of the cost of maintaining their homes. Then the patients in hospitals for the insane who are chargeable to the local municipalities from which they were committed, if eligible for Old Age Pension, have their cheques made payable to the public trustee and the charge against the municipality is discontinued."

The Toronto Board of Education recently approved a plan for cumulative sick leave for school teachers, such leave to become effective after a teacher has given five years of satisfactory service. One-half of his or her unused sick allowance will become available for a cumulative sick leave up to a maximum of 80 days, including the statutory allowance of twenty days.

A claim under the Workmen's Compensation Act was made by an injured workman in Great Britain after an interval of six months. The Act requires that an accident should be reported within a reasonable time, unless it could be shown that delay was due to "mistake, or other reasonable cause." The claimant in this case was illiterate, and had never heard of the Act until he was told about it six months after the accident. The Sheriff Court disallowed the claim.

Sir Horace Wilson, permanent under-secretary of the Ministry of Labour, has been appointed Chief Industrial Adviser to the British Government, in order that he may devote the whole of his time to the work of this position. The appointment was made in furtherance of the policy recently announced by the Prime Minister of more active co-operation on the part of the government with the efforts now being made to develop and reorganize British industry, in regard to both production and marketing.

UNEMPLOYMENT RELIEF ACT, 1930

Further Proceedings in Co-operation With the Provinces, Municipalities and Railway Companies

In the Labour Gazette, September, 1930, an account was given of the proceedings of the Special Session of the Parliament of Canada summoned especially to deal with problems arising out of exceptional economic conditions with resultant unemployment, and of the enactment of the Unemployment Relief Act. Particulars of the expenditures subsequently approved, and of agreements entered into with the Provinces, were given in later issues. The amounts allotted for public works and undertakings in the various provinces in accordance with the Regulations under the Act are as follows:—

Nova Scotia	$ 700,000
Prince Edward Island	90,000
New Brunswick	500,000
Quebec	2,850,000
Ontario	3,850,000
Manitoba	900,000
Saskatchewan	1,000,000
Alberta	900,000
British Columbia	900,000
Yukon	20,000
For the Railway Grade Crossing Fund (from which fund, under the provisions of the Railway Act, contributions are made for the purpose of obviating dangerous level crossings)	500,000

The Canadian Pacific Railway Company and the Canadian National Railways have agreed to advance contemplated construction and improvement programs from one to three years, the Government agreeing to compensate them by paying interest on the estimated total expenditure for a period of eighteen months at the rate of 5 per cent per annum. The undertakings thus projected and commenced are listed at the close of this article.

The provinces are submitting their proposals for provincial and municipal work under the Agreements entered into with the Dominion Government, the following joint expenditures having been approved by the Minister of Labour up to December 10:

Province	Total joint Expenditures
Prince Edward Island	$ 144,000
Nova Scotia	1,878,739
New Brunswick	406,300
Quebec	8,504,950
Ontario	13,384,131
Manitoba	831,590
Saskatchewan	1,477,941
Alberta	2,627,536
British Columbia	2,343,115
Yukon	20,000
Grade Crossing Fund	1,050,000
Canadian Pacific Railway	11,514,000
Canadian National Railway	14,159,403
	$58,341,705

In the November issue details were given of the expenditures approved to November 11. A list of additional expenditures approved to December 10 is given below.

Number of Workers given Employment

Various reports indicate that approximately 84,712 individuals had already, on December 12, been given employment, and this figure does not include Quebec, Saskatchewan, Alberta or the Yukon.

In Alberta, up to the evening of December 6, 80,488 man-days work had been given. In the cities of Alberta, unemployment relief work is, generally speaking, rotated so that the worker gets two weeks' work and is then off for two weeks. On highway work and in the municipal districts of Alberta the two-week rotation system is not exactly followed, but total earnings are allowed of from $40 to $100, depending on the need, with special reference to the number of dependants on the man employed. Alberta has 326 single men working in camps.

In Saskatchewan the rotation of work is generally based on two weeks' employment or until the worker has earned sufficient money to maintain his family for at least two weeks: 93,303 man-days' work has been given in this province up to December 6.

In Manitoba, where rotation is necessary, men are changed weekly. Practically no single men are employed in this province, Manitoba having made special arrangements for camps for single men. In one instance in Manitoba single men are working on a drainage scheme. In this case the men work two days a week and are remunerated by the issuance of one weeks bed and meal tickets. The provincial authorities state that this scheme is showing good results, not only in eliminating those who do not seriously need work, but also in accomplishing considerable good insofar as the drainage plan is concerned; 78,032 man-days work has been given in Manitoba up to December 6.

In Ontario, where 34,000 men had been given employment up to December 6, the total number of man-days' work given is estimated at 340,000 days. Practically none of the men to whom work has been given in this province are working full time. In some cases the rotation consists of employment for six days and then a six-day lay-off. In other cases it consists of three days' work and a three day lay-off. Preference is given to married men, widowers with families, and single men with dependants.

The Province of Quebec is circularizing the municipalities asking for information regarding the number of men working, but up to date they have not been in a position to report the details.

New Brunswick has given employment up to December 1 to 7,753 individuals.

In Prince Edward Island 271 men were actually at work up to December 6, the total number of man-days work given being 4,427. This province reports that the work is being spread over as large an area as possible, and preference is given to married men and those having to support families.

In Nova Scotia 187,169 man-days' work had been given to December 6. In this province work is rotated by alternate days when necessary.

The Canadian Pacific Railway reported that on work being done under the provisions of the Unemployment Relief Act, 1930, 1,132 individuals had been given employment to December 6, the number of man-days' work afforded being 106,763.

The Canadian National Railways reported that on work being done under the provisions of the Act, there were 514 men employed on December 6, the number of man-days' work given up to that date being 47,410.

Additional Expenditures Approved as at December 10, 1930

Province of Prince Edward Island

The following list shows details of undertakings, and replaces the approximate amount shown in LABOUR GAZETTE for month of November.

Laying asphalt surfacing on approaches to Charlottetown on Malpeque and St. Peter's Roads	$ 60,000
Building concrete road on approaches to Summerside on Bedeque Road	15,000
Placing steel culverts on highways in Queen's County	5,000
Repairs to wharves in Queen's County	5,000
Repairs to bridges, including Hillsboro and Oyster Bed, in Queen's County	10,000
Clearing and widening highways in Queen's County	3,000
Clearing and widening highways in Prince County	3,000
Clearing and widening highways in King's County	3,000
Placing steel culverts on highways in Prince County	5,000
Placing steel culverts on highways in King's County	5,000
Building and repairing bridges in Prince County (Mill River, Darnley and Myricks)	15,000

UNEMPLOYMENT SITUATION IN THE UNITED STATES

FURTHER developments in regard to measures taken by government and private agencies to cope with unemployment in the United States have taken place during the past month. The situation at the beginning of November was described in the last issue of the LABOUR GAZETTE, page 1263. The American Federation of Labour issued a statement on December 4, reporting that unemployment increased generally throughout the country during November, the number of wage earners without jobs being estimated at 4,860,000. "If the usual winter increases in unemployment are maintained," it was stated, "the number of jobless will be increased 50 per cent by February, for a total then of 6,290,000, it was estimated by William Green, president of the Federation. Unemployment is already as high as in the worst month last winter. An increase in unemployment from October to November is normal, and the change this year has been about the same as usual. But so many were already out of work in October that any increase is cause for concern."

Figures from trade unions in 24 cities, it was added, show that 40 per cent of union members have been forced to lower standards of living.

President Hoover's Message

President Hoover, in his annual message to Congress, on December 2, on the state of the Union, dealt exhaustively with the unemployment situation, and urged the appropriation of from $100,000,000 to $150,000,000 additional for public works in an effort to meet the crisis. After an analysis of the existing conditions the president proceeded as follows:—

Economic depression cannot be cured by legislative action or executive pronouncement. Economic wounds must be healed by the action of the cells of the economic body, the producers and consumers themselves. Recovery can be expedited and its effects mitigated by co-operative action.

That co-operation requires that every individual should sustain faith and courage; that each should maintain his self-reliance; that each and every one should search for method of improving his business or service; that the vast majority whose income is unimpaired should not hoard out of fear, but should pursue their normal living and recreations; that each should seek to assist his neighbours who may be less fortunate; that each industry should assist its own employees; that each community and each State should assume its full responsibilities for organization of employment and relief of distress with that sturdiness and independence which built a great nation.

Our people are responding to these impulses in remarkable degree.

The best contribution of government lies in encouragement of this voluntary co-operation in the community. The government, national, State and local, can join with the community in such programs and do its part. A year ago I, together with other officers of the govern-

ment, initiated extensive co-operative measures throughout the country.

The first of these measures was an agreement of leading employers to maintain the standards of wages and of labour leaders to use their influence against strife. In a large sense these undertakings have been adhered to and we have not witnessed the usual reductions of wages which have always heretofore marked depressions. The index of union wage scales shows them to be to-day fully up to the level of any of the previous three years. In consequence the buying power of the country has been much larger than would otherwise have been the case. Of equal importance the nation has had unusual peace in industry and freedom from the public disorder which has characterized previous depressions.

The second direction of co-operation has been that our governments, national State and local, the industries and business so distribute employment as to give work to the maximum number of employees.

The third direction of co-operation has been to maintain and even extend construction work and betterments in anticipation of the future. It has been the universal experience in previous depressions that public works and private construction have fallen off rapidly with the general tide of depression. On this occasion, however, the increased authorization and generous appropriations by the Congress and the action of States and municipalities have resulted in the expansion of public construction to an amount even above that in the most prosperous years.

In addition, the co-operation of public utilities, railways and other large organizations has been generously given in construction and betterment work in anticipation of future need. The Department of Commerce advises me that as a result, the volume of this type of construction work, which amounted to roughly $6,300,000,000 in 1929, instead of decreasing will show a total of about $7,000,000,000 for 1930. There has, of course, been a substantial decrease in the types of construction which could not be undertaken in advance of need.

The fourth direction of co-operation was the organization in such States and municipalities, as was deemed necessary, of committees to organize local employment, to provide for employment agencies and to effect relief of distress.

The result of magnificent co-operation throughout the country has been that actual suffering has been kept to a minimum during the past twelve months, and our unemployment has been far less in proportion than in other large industrial countries.

Some time ago it became evident that unemployment would continue over the winter and would necessarily be added to from seasonal causes and that the savings of workpeople would be more largely depleted. We have as a nation a definite duty to see that no deserving person in our country suffers from hunger or cold. I therefore set up a more extensive organization to stimulate more intensive co-operation throughout the country. There has been a most gratifying degree of response, from Governors, Mayors and other public officials, from welfare organizations, and from employers in concerns both large and small. The local communities through their voluntary agencies have assumed the duty of relieving individual distress and are being generously supported by the public.

The number of those wholly out of employment seeking for work was accurately determined by the census last April as about 2,500,000. The Department of Labor index of employment in the larger trades shows some decrease in employment since that time. The problem from a relief point of view is somewhat less than the published estimates of the number of unemployed would indicate.

The intensive community and individual efforts in providing special employment outside the listed industries are not reflected in the statistical indexes and tend to reduce such published figures. Moreover, there is estimated to be a constant figure at all times of nearly 1,000,000 unemployed who are not without annual income but temporarily idle in the shift from one job to another. We have an average of about three breadwinners to each two families, so that every person unemployed does not represent a family without income.

The view that the relief problems are less than the gross numbers would indicate is confirmed by the experience of several cities, which shows that the number of families in distress represents from 10 to 20 per cent of the number of the calculated unemployed. This is not said to minimize the very real problem which exists, but to weigh its actual proportions.

As a contribution to the situation, the Federal Government is engaged upon the greatest program of waterway, harbour, flood control, public building, highway and airway improvement in all our history. This, together with loans to merchant shipbuilders, improvement of the navy and in military aviation, and other construction work of the government will exceed $520,000,000 for this fiscal year. This compares with $253,000,000 in the fiscal year 1928. The construction works already authorized and the continuation of policies in government aid will require a continual expenditure upward of half a billion dollars annually.

I favor still further temporary expansion of these activities in aid to unemployment during this winter. The Congress will, however, have presented to it numbers of projects, some of them under the guise of, rather than the reality of their usefulness in the increase of employment during the depression. There are certain common-sense limitations upon any expansions of construction work.

The government must not undertake works that are not of sound economic purpose and that have not been subject to searching tech-

nical investigation, and which have not been given adequate consideration by the Congress. The volume of construction work in the government is already at the maximum limit warranted by financial prudence as a continuing policy. To increase taxation for purposes of construction work defeats its own purpose, as such taxes directly diminish employment in private industry. Again any kind of construction requires, after its authorization, a considerable time before labour can be employed in which to make engineering, architectural, and legal preparations.

Our immediate problem is the increase of employment for the next six months, and new plans which do not produce such immediate result or which extend commitments beyond this period are not warranted.

The enlarged rivers and harbors, public buildings and highway plans authorized by the Congress last session, however, offer an opportunity for assistance by the temporary acceleration of construction of these programs even faster than originally planned, especially if the technical requirements of the laws which entail great delays could be amended in such fashion as to speed up acquirements of land and the letting of contracts.

With view, however, to the possible need for acceleration, we, immediately upon receiving those authorities from the Congress five months ago, began the necessary technical work in preparation for such possible eventuality. I have canvassed the departments of the government as to the maximum amount that can be properly added to our present expenditure to accelerate all construction during the next six months, and I feel warranted in asking the Congress for an appropriation of from $100,000,000 to $150,000,000 to provide such further employment in this emergency. In connection therewith, we need some authority to make enlarged temporary advances of Federal highway aid to the States.

I recommend that this appropriation be made distributable to the different departments upon recommendation of a committee of the Cabinet and approval by the President. Its application to works already authorized by the Congress assures its use in directions of economic importance and to public welfare. Such action will imply an expenditure upon construction of all kinds of over $650,000,000 during the next twelve months.

Relief Work in New York

Some idea of the extent of the relief work now being carried on co-operatively by various organizations throughout the country may be gathered from the following list of agencies that were actively engaged in New York city at the end of November:—

Emergency Employment Committee.—Organized to raise $6,000,000 to be used in paying heads of families $5 a day for three days' work a week in the parks and in non-profit making organizations. The work is supplied by the Emergency Work Bureau, conducted by the Charity Organization Society, Association for Improving the Condition of the Poor, Jewish Social Service Association and Catholic Charities.

Mayor's Committee on Unemployment Relief.—Obtains funds from donations by municipal, county, borough and judicial employees and public gifts, relief being distributed weekly to needy persons canvassed by the police. Gifts are in foodstuffs given out at police stations and in checks delivered by policemen after investigation.

Salvation Army.—Feeds the hungry in breadlines and at food stations, affords shelter to the homeless, supplies the emergency requirements of penniless families and seeks jobs for the workless.

City Free Employment Bureau.—Seeks jobs for men and women who crowd into its offices daily.

State Labour Department.—Has three free employment bureaus on the lookout for jobs.

Social Service Exchange.—Clearing house for the names of all applicants to social and welfare agencies, to the police and mayor's committee. This organization advises whether such applicants are "known" to social agencies or whether they have never before applied for assistance. The replies are transmitted daily to the agencies whence they emanate.

Board of Education.—Collects funds from the teaching and education staffs, feeds hungry children and forwards what is left to the Mayor's committee.

Regular Agencies.—Include the four organizations co-operating with the Emergency Employment Committee as well as all other agencies, which are carrying on their usual unemployment programs, such as the Y.M.C.A. and Y.W.C.A., the settlement houses, men's and women's clubs and family and relief agencies.

Emergency Breadlines.—These comprise some fifty-three breadlines, food stations and "handout" agencies of various kinds, some established and others opened for the emergency.

Co-ordinating all these agencies is the Welfare Council, not directly engaged in relief and social work but made up of several hundred affiliated agencies, which have formed a co-ordinating committee to unify public and private relief work.

Demonstration Employment Office at New York

A model employment office is to be organized in New York this winter, as a step toward putting into effect the recommendations based on a recent study of the state's free employment service. The *Survey* (New York) states that Mr. Arthur Young of Industrial Relations Counsellors, Inc., has resumed the chairmanship of the Advisory Council on Employment Problems, which has been reorganized by Miss Frances Perkins, State labour commissioner, to carry out the new program for the State employment service. Mr. Bryce M. Stewart, formerly director of the Employment Service of Canada, will act as chairman of the Council's committee on the demonstration. In announcing the plans for the new bureau Mr. Young stated:—

"The demonstration centre will provide the first laboratory study ever made on a community-wide basis of the problems encountered by workers in securing employment and by employers in securing workers through a public employment office. Almost every market—the produce market, the clothing market, the real estate market, the stock market—have been the subject of pretty thorough-going analysis and advanced planning. The most vital of all, however, the supply of the demand for human services has remained neglected. The demonstration makes possible the application to this field of the engineering technique. Its results should have significance not only for the particular community in which it is set up and the state of New York, but for the whole country."

Proposed Unemployment Bond Issue in United States

A group of business men, bankers, civic, religious and social leaders in the United States were reported by the New York *World* on November 30 to have undertaken to form an emergency committee for federal public works, which will further the issue of a billion dollar federal unemployment bond issue, or "prosperity loan." This fund, it is explained, would apply to unemployment the method of dealing with a national emergency that was used in connection with the Liberty Loan during the war.

It is proposed that a substantial portion of the huge sums now available in idle capital be put to the task of building necessary federal public works, such as river and harbour improvements, flood control, road extensions and paving, public buildings and the like on so large a scale that employment will be given to several hundred thousands of men directly on the projects themselves and to countless thousands of others in factories on railroads and elsewhere supplying material and manufactured product. "To assume that the government could not afford to spend a billion dollars—or several billion dollars—in this manner would be unreasonable," says the statement. "To pay the interest on amortization might require a slight increase in the income tax rate, but it cannot be doubted that the financial and psychological stimulus to prosperity would so increase corporation and individual incomes as to more than offset the taxes collected by the government to finance the program."

Unemployment Fund in New York Clothing Trades

The Board of Trustees of the New York Clothing Unemployment Fund, at a recent meeting appropriated $100,000 for distribution in the New York Market. This was the second appropriation from the fund in 1930, and brought the total for the year to date up to $250,000. (An account of this system was given in the LABOUR GAZETTE, September, 1924, page 766, and in previous issues.)

In a recent statement, Jacob Billikopf impartial chairman of the men's clothing industry in New York city, points out that this progressive labour group has now had seven years' successful experience with unemployment insurance. The first fund was set up in Chicago in May, 1923, and the first benefits under it were distributed a year later. Until early in 1928, the fund was accumulated out of equal contributions by employers and employees, aggregating three per cent of the industry's payroll. The contribution was then increased to four and a half per cent by raising the employers' contribution to three per cent, under an agreement between the manufacturers and the Amalgamated Clothing Workers of America. Since 1924, the men's clothing workers in Chicago have received $5,341,000 in unemployment benefits.

In the summer of 1928, similar funds, amounting to 1½ per cent of the pay roll, have been set up in the markets of Rochester and New York. Mr. Billikopf estimates that the total unemployment benefits paid out of these funds during 1930 will amount to $1,500,000. He adds: "The fact that these three funds will remain solvent even after the excessive expenditures imposed upon them by prevailing hard times is eloquent testimony to the practical nature of this device, which the organized clothing manufacturers and the union have created for dealing with the most serious and difficult of our modern industrial problems."

COMPANY METHODS OF STABILIZING EMPLOYMENT

THE Industrial Relations Section in Princeton University recently issued a new memorandum describing certain "Company Plans for the Regularization of Plant Operation and Employment" that are now in effect in the United States. The report divides private plans for reducing industrial instability into two main groups: first, those which seek directly to prevent instability; and second, those designed to alleviate unemployment and other evils resulting from instability. The plans outlined in the memorandum contain constructive as well as remedial features. Moreover, as it is pointed out, the principles they incorporate are capable of being applied to other industries than those in which they are found.

The first "plan" considered is that of the Proctor and Gamble Company, which was outlined in the LABOUR GAZETTE, October, 1930. page 1118. The plan adopted this year by the General Electric Company, another of the examples given in the memorandum, was noted in the issue for September, 1930, page 1059 (also January, 1930, page 15); while that of the Dennison Manufacturing Company of Massachusetts was described in the issue for September, 1922, page 998.

A Large Industrial Corporation

Among the other examples of successful stabilization plans the memorandum mentions that of a large industrial corporation, whose name is withheld. This company recommends the following policy which it has had in force in its own plants for several years as a means of stabilizing employment as far as possible in time of business depression when there is not sufficient work for the existing force:

1. Eliminate all possible hiring of new employees.
2. Eliminate all possible overtime.
3. Transfer employees from slack to busy departments.
4. Consider fully possibilities of carrying out dismantling and other needed maintenance and repair work which may have been postponed from busier times.
5. Do work with present force rather than by contract, as far as practicable.
6. Permanent lay-off of employees of less than one year's service unless of such conspiciuous ability that their retention is clearly in the interest of the company.
7. Review the remaining force of employees of less than ten years' service for the purpose of eliminating those who, notwithstanding a fair opportunity, have been unable to keep their work up to a grade that would justify their re-employment.
8. Part-time work—The method to be used for part-time work will depend largely on the nature of the operation and may well vary within each organization, but it is expected that the normal standards of efficiency will be maintained. In all cases employees are to be paid only for the proportion of time actually at work. This should apply to all employees throughout the entire organization, whether salaried or wage earners, who are not needed for full-time work. While employees will be paid only for time worked, the present rates of pay will remain unchanged and full-time work will automatically restore the full benefits of the present wage and salary scales.
9. In case part-time work does not meet the requirements of the situation, or is not feasible in a particular group, the next step should be lay-off of employees of one or more but less than ten years' service.
10. Recommend retirement of employees eligible to annuity, even though the employee may not desire to retire.
11. As a last resort consider lay-off of employees of 10 or more years' service.

This procedure is related to a program of permanent lay-off bonuses which the company has been following.

Delaware and Hudson Company

This railroad company adopted the plan of an annual budget which distributes as evenly as possible over each month the amount of money to be expended. Through this plan more steady employment is provided for employees engaged in maintenance work.

Another policy followed by the company is to move non-revenue freight during such time as revenue freight falls off. To the extent that these non-revenue movements can be crowded into the periods when traffic is light, because of seasonal variations the effect is to stabilize employment, and while the ratio of influence to the total body of men may be small, it is believed by the company that the ratio of influence as to certain groups may be large and the relief correspondingly great.

As a further means of stabilizing forces an elastic work day has been instituted in maintenance departments varying from eight to ten hours at the same hourly or piece work rate, with a six day week. Under this plan, it is proposed, forces are to be fully maintained as long as provision can be made for

work for forty-eight hours per week, and no new men are to be hired until the increase in work requires sixty hours work per week to be exceeded.

According to a statement by an officer of the road the latter plan has had a very good effect on stability of employment. The variation in employment in the maintenance departments of the road in 1920 was between 10,050 and 8,136 or 1,914 men. In 1929 this was between 6,118 and 5,700 or 418 men.

The Delaware and Hudson Company also has a plan for dismissal bonuses of $10 or $15 a week up to six weeks while unemployed, covering the employees laid off or discharged for cause who have participated in certain insurance plans.

The Walworth Company

This company manufactures and sells a complete line of steamfitters' and plumbers' staple supplies. Most orders are taken for immediate shipment so that inventories must be built up to meet future demand. The company has adopted a forecasting and budget system for sales, inventories, production, and employment. From a careful study of past business cycles the statisticians predict the curve for the coming year. Comparison is made with type years in the past business cycles.

With these general forecasts in mind, careful attention is given to working out monthly and yearly sales dead lines and sales quotas. The former represents what *must* be sold, the latter what *can* be sold with hard work and favourable conditions. This is not a simple matter because yearly totals, monthly totals, and the yearly amount of each particular article manufactured must be forecast and these amounts in turn budgeted to the various sales areas. By planning this far in advance, the company finds it possible to control employment by increasing or decreasing the hours of work long before the actual change in the business cycle. Greater steadiness in production and employment is possible by manufacturing for inventories which the company feels sure can be sold. The number of employees hired is based on the normal annual tonnage with allowance on the one hand for the secular trend of the business, and on the other for loss of time through sickness and for probable turnover.

Southern Pacific Company (Pacific Lines)

This company has recently established a "Central Bureau of Information as to Laid-Off Employees" as a means of stabilizing employment on its Pacific lines. In the memorandum advising officers of the plan, it is recommended that during the existing conditions of unemployment due to reduced traffic, no new employees should be engaged if qualified laid-off employees are available. The Central Bureau, according to this plan, maintains current information as to employees laid off or about to be laid off and all divisions and departments notify the Bureau when employees of any class, except itinerant labour, are required that cannot be supplied among employees laid off by that division or department. Upon receiving such notification, the Bureau notifies the division or department nearest the source of the demand which has laid off employees of the class required to respond directly to the officer making the inquiry, sending a copy of the response to the Central Bureau. If the responding officer is unable to supply the employees needed, he notifies the Bureau.

The plan is a significant attempt of a decentralized organization to avoid inconsistent action in regard to lay-offs and hirings where possible. The mobility of the personnel affected is increased by the provision of free transportation. The company has not developed any plan of financial indemnification of employees laid off, but in the procedure described has assumed the responsibility placing these employees elsewhere in its own organization if at all possible. While the direct and indirect expense involved in the clearing house system is small compared to that a lay-off bonus, the company has accepted the principle that some expense in regularizing the employment of its personnel is a proper charge upon itself.

Conclusions

Summing up the results of existing plans for stabilizing employment the Memorandum concludes as follows:—

"The most promising indication in the development of definite regularization programs is that many employers who have had continued experience in their operation are satisfied that they more than pay for themselves. While the regularization of the employment of personnel is the immediate goal of company research, more steady employment of plant and equipment, greater dilution of overhead costs per unit of product, and improved tone and efficiency all along the line are not unlikely to result from definite action."

The British Prime Minister recently quoted in the House of Commons a statement by a prominent American manufacturer, to the effect that if unemployment statistics were compiled on the same basis in the United States as in Great Britain, the number of unemployed workers in the United States would appear between ten and twelve million persons.

TENDENCIES IN EMPLOYMENT IN GREAT BRITAIN, 1923-1930

THE *Ministry of Labour Gazette*, November, 1930, gives the following information as to the changes in the estimated number of insured persons in the various industries in Great Britain from 1923 to 1930. It may be noted that the unemployment Insurance Acts provide, subject to certain exceptions, for the compulsory insurance against unemployment of substantially employed persons. The principal classes of persons who are excepted from such compulsory insurance are juveniles under 16 years of age, and (since 2nd January, 1928) persons aged 65 and over, persons employed otherwise than by way of manual labour at a rate of remuneration exceeding in value £250 per annum, persons employed in agriculture and private domestic service, and outworkers. Persons employed by local public authorities, railways and certain other public utility undertakings, members of the police forces, and persons with rights under a statutory superannuation scheme may, in certain circumstances, also be excepted. An unemployment book, on which is recorded, *inter alia*, the industry in which he is employed, is issued to every insured person, and this book must be lodged at an Employment Exchange whenever the insured person to whom it relates makes a claim for unemployment benefit, or, without claiming benefit, ceases to be employed in an insured trade. The book must be removed and deposited with the employer for stamping as soon as employment in an insured trade is resumed. The number of persons insured against unemployment under the Unemployment Insurance Acts is estimated once a year on the basis mainly of information derived from the exchange of Unemployment books in July.

The total number of insured workers, aged 16 to 64 inclusive, in Great Britain at the beginning of July, 1930, is estimated at 12,138,000 (including persons insured under the Special Schemes for the banking and insurance industries), as compared with 11,834,000 at July, 1929, and 11,629,000 at July, 1928.

For Great Britain and Northern Ireland the estimated number insured at July, 1930, is 12,405,700 as compared with 12,094,000 at July, 1929, and 11,881,500 at July, 1928. In the five years July, 1923, to June, 1928, there was an estimated increase in the numbers insured against unemployment of 6·5 per cent, or an average of 1·3 per cent per annum. In the year July, 1928, to June, 1929, the increase was 1.9 per cent of the numbers insured at July, 1923, and in the year July, 1929, to June, 1930, there has been a further increase equivalent to 2·8 per cent of the numbers insured at July, 1923. If the numbers aged 16 to 64 insured at July, 1923, are represented by the index figure 100 the corresponding figures for the ensuing seven years are as follows:—

July, 1923	100·0
July, 1924	101·6
July, 1925	103·5
July, 1926	104·8
July, 1927	105·6
July, 1928	106·5
July, 1929	108·4
July, 1930	111·2

The rate of increase, therefore, has not been constant throughout the period of seven years. It has been influenced by three main factors, namely, the state of employment; the extent to which unemployed insured persons have maintained contact with the Employment Exchanges; and changes in the conditions for the receipt of unemployment benefit.

In March, 1930, the Unemployment Insurance Act, 1930, came into force, and under the provisions of that Act certain other restrictions on the allowance of benefit were removed. It was estimated that these changes had led to the addition to the numbers unemployed on the registers of Employment Exchanges of not less than 60,000 persons, and the great majority of these were persons who would otherwise have dropped out of the statistics of the numbers insured. Apart from this, the effect of the Act was to grant benefit to a large number of persons who had remained on the registers as unemployed but who had been disqualified from benefit under the previous Acts and who would thus have tended to pass out of the Scheme. There is also good reason for believing that, whether as the result of the operation of the new Act, or as the result of the depression in trade during the present year, considerable numbers of persons are now claiming unemployment benefit, upon leaving employment, who formerly would not have done so. There is also reason to believe that the recent depression in industry has led to a reduction in the numbers who would normally have passed outside the scope of the scheme through entering business on their own account or, in the case of non-manual workers, by passing above the £250 salary limit. All these tendencies, taken together, have had the effect of retaining within the scheme of unemployment insurance a large number of persons who, in the circumstances of previous years, would have passed out.

Tables are given showing that electrical engineering, the manufacture of motor vehicles, cycles and aircraft, electrical wiring, electric cables and lamp manufacture, bread, biscuit and cake making, furniture making, printing, publishing and bookbinding, and the distributive trades, continue to attract among males a large proportion of new entrants to insurance. In the case of females, the high rate of change in personnel continues in hotel, boarding house, and club service, since this industry shows an exceptionally high percentage of new entrants and also a high percentage of exitants. In the textile trades, which have been subject to acute depression, the percentage of new entrants among both males and females is comparatively low; but whereas in the cotton industry the number of insured males shows an absolute decrease during the year, the number of females shows an increase which is most probably due to the influences dealt with above.

Among men there appear to have been transfers into other industries from the mining and chemicals groups, from general engineering, motor vehicles, cycles and aircraft, the cotton and wool textile industries, the manufacture of leather and leather goods, and from the clothing, woodworking, musical instruments, laundry and distributive trades.

The decrease in the number of insured persons classified as belonging to the coal-mining industry continued during the year ended June, 1930. This decline first appeared in the year 1924-5, and since July, 1924, the numbers in the industry in Great Britain have declined by more than 12 per cent. Since July, 1927, there has been a net decrease of 94,820 in the numbers of insured workpeople aged 16 to 64 in the industry, but of this decline only 5,240 occurred during 1929-30.

UNEMPLOYMENT RELIEF IN AUSTRALIA

ACCORDING to the *Quarterly Summary of Australian Statistics* the percentage of unemployed members of trade unions at the end of the second quarter of 1930, was 18·5 as compared with 10·0 on the same date in 1929. In order to meet the serious problem indicated by these figures the Federal Government recently decided to distribute one million pounds among the various states to assist them in relieving unemployment, and several of the state governments have taken special measures to cope with unemployment. The LABOUR GAZETTE, October, 1930, page 1114, described the provisions of the Unemployment Relief (Tax) Act and the Prevention and Relief of Unemployment Act passed this year by the legislature of New South Wales. The measures taken in Queensland and Victoria are as follows:—

Queensland

The Queensland Government undertook in April to establish a scheme of relief works for the unemployed, using for this purpose public works to be carried out by the various government departments and by local authorities. Such works must be of developmental character, and such as would not ordinarily be carried out in the near future. Only those who had been bona fide residents of Queensland for at least one year would be given employment. Wages were to be 10 shillings a day, with an extra allowance of 2 shillings a day for married men or those with dependants. Funds would be raised by a levy on wages, salaries, and other income, and until suitable legislation could be passed for this purpose the Government would advance the necessary funds as a loan.

Upon its assembly in July, the Queensland Parliament passed an unemployment relief tax act, which was assented to July 29 and became operative August 1. The tax is to be levied on wages, salaries, and income of every description, with such minor exemptions as savings bank interest, invalid and old-age pensions, workers' compensation payments, war pensions and gratuities, State children's allowances, unemployment insurance payments, and Government rations. The tax is to be 3d. for every £1 of income (1¼ per cent), and for fractional parts of £1, 1d. for each 6s. 8d. (1¼ per cent). In the case of wages, the employer is bound to deduct the tax from the employee's earnings before paying them over; in the case of income from other sources, the methods for collecting the regular income tax are used.

The tax thus raised is to be paid into an unemployment relief fund, from which such grants in aid of relief work are to be made as the minister in charge considers wise. Unlike the act of New South Wales, this contains a special authorization for the use of the fund in relieving unemployed women workers:

Such portion of the said fund as the minister may in his discretion determine, to be applied in and for the relief of unemployment in respect of female workers, and/or in aid of the distress among female workers; and in regard

to the administration of this provision a special board may be established.

Provision is made for establishing central and local relief boards to administer the act, and its duration is fixed at one year; it may, however, be extended by an order of the government in council for such length of time as is considered necessary.

It is estimated that £800,000 ($3,893,200) will be raised under the terms of this act.

Victoria

Victoria passed a law this year, to be operative for one year from July 1, 1930 to provide for unemployment relief. Funds are to be raised by a stamp tax on wages up to £6 ($29.20) a week, and a special tax on incomes of higher amounts. Only workers receiving less than 30s. ($7.30) a week are exempt. Salaries and wages include commission, bonus, and allowances of any kind paid to any employee. The responsibility for the payment of the stamp tax is upon the employer.

According to a statement quoted in the Queensland Industrial Gazette, the Victorian Government expects to raise £750,000 ($3,649,875) through this tax, and in addition large contributions are expected from the general Government and from municipal bodies. The amount is to be used for carrying on relief works for the benefit of the unemployed, who, at the beginning of July, were estimated to number between 25,000 and 30,000.

Unemployment Insurance in Queensland, Australia

The sixth annual report on the administration of the Unemployed Workers Insurance Acts, 1922 to 1927, of Queensland, Australia, outlines the work of the Unemployment Council during the year ended March 31, 1929. References to this legislation have been made in the LABOUR GAZETTE, the purposes and function of the Acts being reviewed in issues for June, 1923, page 645, and for June, 1928, page 596, while the provisions for measuring unemployment were described in issue for May, 1929, page 466. The Unemployment Council constituted under the Acts (consisting of the Minister of Labour as chairman, the Director of Labour, the Registrar of Friendly Societies, and representatives of the employers and workers,) was compelled some time ago to increase the weekly contribution to the fund from 4d. to 6d. such increase applying to employers, workers, and the Crown. The increased rate of contribution became operative as from July 1, 1928, and the additional contributions received as a result of this increase have been found sufficient to meet the payments of sustenance and working expenses during the year under review, and to permit of a credit balance amounting to £62,997 being carried forward on June 30 last as against a credit balance of £10,665 carried forward on July 1, 1928, from the previous year.

The report states that "although this balance may be regarded as satisfactory and sufficient to meet requirements under normal conditions, it is essential that a fund of this nature should hold a substantial reserve in order that the Council might be in a position to meet any extraordinary unforeseen demand arising out of unusual business depression, financial stringency, droughts, or other causes. The reserves at present held are not sufficient to permit of the Council entertaining any proposals to use the fund for the purpose of establishing or subsidizing any public works with a view to providing employment and so reducing the demand on the fund by way of sustenance."

The statement of receipts and disbursements indicates that the receipts from contributions of employers and workers, together with Government endowment, total £491,156 as against £342,297 in the previous year, this increase being due to the increase in the rate of contributions from 4d. to 6d. per week. Sustenance payments show an increase from £390,336 to £414,257.

With the exception of general labourers, waterside workers and coal miners drew more from the fund as a class than any other class of workers during the period under review. It is explained that waterside workers and coalminers are paid sustenance on an entirely different basis from ordinary workers, special rules applying to these callings under the provisions of the Acts relating to casual workers. These workers, whose employment is at all times of a casual nature, are paid sustenance on a monthly basis with respect to the unemployed days during each month, provided that their total earnings from all sources during the month do not average the basic wage of £4 5s. per week, but in no case are they paid sustenance to such an extent as to bring their earnings together with their sustenance, beyond that average. Further, the maximum amount of sustenance which they may draw in any one year is limited, as in the case of ordinary workers, to fifteen weeks, or such lesser

amount as their contributions may entitle them to receive on the ordinary basis of assessment.

There was considerable increase in the amount paid to waterside workers as compared with the previous year, and also in the number of workers following this calling who participated in the payments, the relative figures being as follows:—During the year ended March 31, 1928, 3,571 waterside workers drew £28,934, while in the year ended March 31, 1929, 4,999 drew £43,144. This increase, both in the number of workers and in the amount of sustenance drawn, is accounted for by the influx of new labour on the water fronts following on the disclocation of work during September and October last. On the other hand, the statistics relating to the coal-mining industry indicate that the workers in this calling had a slightly better year, and therefore drew less from the fund, the relative position being as follows:—During the year ended March 31, 1928, 1,873 coal miners drew £13,965, while in the year ended March 31, 1929, 1,731 drew £12,364.

The general conclusions reached in the report are as follows:—

"The Acts are generally working smoothly and satisfactorily and evasion through ignorance has practically been eliminated, the employing public now recognizing the liability to conform with the requirements of the law by stamping employees' contributions books regularly. Much has been written and said since the inception of the Act on the inequity of paying unemployment sustenance to workers who follow seasonal callings at which they are generally believed to earn high wages, and it has been frequently suggested from various quarters that such workers should be debarred from participating in the benefits and privileges of the Act, when it could be shown that their earnings for the year exceeded a certain figure. It is a difficult matter to devise a scheme on the basis of the present Act which would be equitable in this regard, as it must be remembered that all of these seasonal workers are governed by industrial awards and are compulsory contributors to the fund, thus ensuring for themselves equal benefits with other workers when, owing to the seasonal nature of their employment, they are forced on to the unemployed market."

Effect of Reduced Working Hours on Unemployment

The German Institute for Special Investigations (Institut für Konjunkturforschung) recently communicated to the International Labour Office at Geneva the results of a study of the probable effect of a reduction of working hours on unemployment. This study was suggested by the prevalence of unemployment and the suggestion that the possibilities of employment might be increased by the general adoption of shorter hours. The report first gives the results of a theoretical calculation of the results that might be expected, which is followed by a statement of various practical considerations tending to modify the amount of additional employment that would be created by such a policy.

"A classification of the workers in different groups according to the length of their working hours shows that workers employed 44 hours a week perform a total of 330,000,000 hours of work a week. If the maximum hours of work were reduced to 44 a week, for all workers it would be necessary to obtain the same results to employ 7,500,000 workers, instead of 6,800,000 now working 44 hours a week or more; were the maximum reduced to 40, it would be possible to give employment to 8,600,000, as against 7,100,000 at present working 40 hours a week or more. Thus, the possibility of employment would be extended to 700,000 new workers by the adoption of a 44-hour week and to 1,500,000 by a 40-hour week.

"In practice, however, the differences between the various districts and branches of industry cannot be overlooked. The increase in the number of persons in employment which would result from the reduction of working hours would doubtless cause workers to migrate, and would in any case be limited by the number of workers available in each branch of industry; the short time which is at present widespread arises from these same difficulties. Again, from an economic point of view, the proposed measures would lead in many cases to a considerable rise in the cost of production."

In conclusion, the Institute points out that the decrease in unemployment resulting from a reduction of working hours would in any case be less than that shown by purely theoretical calculation.

Employment Regulations in Russia

Two measures were recently adopted in the Soviet Union relating respectively to the placing of workers in employment and the payment of benefit to the unemployed. Both measures are designed to remedy a scarcity of labour, one by penalizing any unemployed person who will not accept or remain in any employment to which a labour exchange has assigned him, and the other by the complete suspension of unemployment benefit. *Industrial and Labour Information,* the weekly publication of the International Labour Office (Geneva), in its issue for November 10, points out that according to official returns, the number of unemployed on the "live" register in Russia has fallen since the beginning of this year from about 1,250,000 to about 600,000. However, certain classes of the community are deprived of any right to registration, and the register has been severely cut down in the last few months; further, it is well known that workers not of "proletarian" origin and proved loyalty to the Government are not willingly admitted to trade union membership, and that non-unionists are not easily admitted to employment. It would not be correct, therefore, to assume that 600,000 represents the total number of workless persons in Russia. There must be a considerable number of others who for one reason or another are prevented from working. But there is undoubtedly a considerable expansion of industrial activity, which is due largely to monetary inflation, involving a rise in prices.

In view of the shortage of labour, very strict regulations have been introduced. Thus, unemployment benefit is suspended at a single stroke and without exception. A worker is required to take whatever employment is offered to him by an employment exchange, without regard to his qualifications or the locality to which he must go. Should he refuse, except for reasons of health, he will be struck off the register and, presumably, left to his own resources. A skilled worker already in employment may be transferred to any other post in any other district, whether he is willing or not, if such a transfer is considered necessary to meet national requirements. Finally, a worker who quits his employment at his own will or is dismissed for breaches of discipline may be branded as a "deserter" and disqualified for re-employment.

NOTES ON TECHNICAL EDUCATION AND APPRENTICESHIP

Enrolments in Technical Schools at Regina

The enrolments in technical classes at Regina are steadily increasing, according to a report of Mr. Thompson, chairman of the vocational education committee, at a recent meeting of the collegiate board. Mr. Thompson stated that the problem of future accommodation for students in the Balfour Technical School will have to be faced the coming year, as the school is already overcrowded.

Mr. Thompson's report indicated that in 1928 the enrolment in day classes was 534 and in 1929 it increased to 650. In October, 1930, the vocational day classes had grown to 870, which included 590 students in the Commercial High School and 280 in the Balfour Technical School. Evening classes also have shown a steady growth with a present enrolment of 600 adults taking 20 different courses.

Mechanics' Short Courses to be Established at Saint John

The Saint John vocational committee has approved the establishment of short courses for mechanics at the vocational school, to be held from January to March next year. The opening of short courses is a new venture in the curriculum of the school, and was recommended because it is believed those who are unemployed at this time are eager to have a course for self-improvement. The principal of the school, Mr. F. Peacock, reports that there is a large demand for short courses of one to two months in this time of unemployment. He recommended the establishment of short courses in motor mechanics, electricity in relation to motor mechanics and oxy-acetylene. Pupils from all parts of the province are eligible to attend these courses.

Proposed Rural Vocational Schools in Ontario

The Hon. T. L. Kennedy, Minister of Agriculture for Ontario, announced on December 5 that it was proposed to establish vocational schools in the rural districts of the province. He referred to the needs for bringing to the farming districts more of the educational advantages obtaining in the urban districts. Vocational schools operating three-

months of the year where girls could get training in sewing, cooking and home nursing, and boys could take up advanced studies in modern farming methods would, he said, be a great boon to the rural sections.

Northern Vocational School, Toronto

Erected this year at a cost of one and a half millions, the Northern Vocational School, Toronto, was formally opened on November 21. The attorney-general of Ontario, Hon. W. H. Price, was present as representative of the Premier, Hon. G. Howard Ferguson, who had laid the corner stone on February 21.

Of the 1,185 students registered for the first term this fall, some 500 are taking the technical training while the remainder are studying for commercial work. Twenty-five hundred are registered in the night classes.

PROPOSED NATIONAL CIVIL SERVICE COUNCIL

THE Hon. Senator G. D. Robertson, Minister of Labour, was waited on by a delegation of representatives of the various Civil Service associations on December 9, the interview being for the purpose of Federal Government employees requesting the Government to take action in the matter of establishing a National Civil Service Council. The LABOUR GAZETTE, May, 1930, published an Order-in-Council, P.C. 970, passed on May 7, providing for the calling of a Drafting Committee, to represent equally the Government and various Civil Service associations, to draft a constitution for a proposed joint council in the public Service to consider and advise the Government on matters of mutual concern to the Government and its employees. The delegation requested the Minister of Labour to give consideration to the matter of convening the Drafting Committee provided for in this Order-in-Council.

The delegation outlined the aspirations of the Civil Service, as represented by its organizations, in the direction of the establishment of some permanent machinery for the consideration of Service problems, such a Board, to represent both the Government and its employees, having been first suggested over ten years ago.

The Minister discussed the question of the particular type of board or council which would best meet the requirements of the situation, without conflicting with existing regulations on the Civil Service. He expressed his personal sympathy with employees being given every opportunity of presenting their fair claims from time to time, and went into some detail regarding his own views on the subject of the best course to pursue. At the conclusion of the interview it was agreed that the organizations would give further consideration to the matter, bearing in mind the Minister of Labour's remarks, and that they would again meet the Minister on the subject at a later date.

Organizations represented at the interview were Civil Service Federation of Canada; Civil Service Association of Ottawa; Dominion Customs and Excise Officers' Association, Dominion Public Works' Association; Amalgamated Civil Servants of Canada; Federated Association of Letter Carriers; Professional Institute of the Civil Service; United Postal Employees of Canada; Dominion Railway Mail Clerks' Federation; and the Halcyon Club of Ottawa. The memorandum submitted by the delegation was presented by Mr. V. C. Phelan, President, Civil Service Federation of Canada. Mr. H. H. Ward, Deputy Minister of Labour, was with the Minister of Labour at the interview.

Benefit of Whole-Time Health Services

The annual report of the United States Public Health Service for the past fiscal year states that although some progress is being made in the establishment of adequate and properly organized local health service, only about 25 per cent of the rural population of the United States is at present so provided. It is the opinion of the Public Health Service and of the State Health authorities, as well as of outstanding leaders in the field of public health in a number of education institutions and elsewhere, that the development of efficient whole-time local health organizations, through which all necessary public health activities may be conducted in proper sequence and in proper relation one to the other, is the program that will yield a far greater return on the dollar invested, in lives saved and sickness prevented among all groups of both sexes than any program limited to special diseases or to particular elements of the population that has ever been tried out or suggested.

ALL-CANADIAN CONGRESS OF LABOUR

Summary of Proceedings of Fourth Annual Convention

THE fourth annual convention of the All-Canadian Congress of Labour was held in the assembly hall of the Georgia Hotel in Vancouver, November 3-6, the address of welcome on behalf of the Vancouver Labour Council being delivered by Mr. H. Burgess. Mr. A. R. Mosher, president of the congress, replied, after which the report of the credential committee was presented, this report as finally adopted showing representation of 92 delegates.

President's Address

President Mosher, in his address, stated that in no part of Canada had the national labour movement made greater progress since the Congress began than it had on the lower mainland of British Columbia. Reviewing the general situation in Canada as it affected the Congress, Mr. Mosher said that adverse industrial conditions had been reflected in the slowing up of organization. The labour movement, he declared, has scarcely grasped as yet the significance of the changes which are coming over modern industry through the introduction of labour-saving machinery. "It is obvious," he said, "that with the continuation of this development a change in the present economic system is enevitable." As a start in the right direction, he believed that federal legislation should be passed regulating the hours of labour for every industry. A six-hour day and a five-day week would increase the number of employed by more than 38 per cent in many industries, and so long as weekly wages were not decreased it would add considerably to the purchasing power of the people.

In referring to the emergency session of Parliament which had been called to deal with the unemployment problems the president stated that the relief provided, both directly and in the way of public works, would no doubt help considerably to tide over the difficult winter period. In pointing out that labour representation in Parliament was essential, Mr Mosher stated that "one of the most regrettable features of the present situation in Canada is the lack of political consciousness among the workers," and declared that "the initiative in the direction of labour representation must be taken by the All-Canadian Congress of Labour." Mr. Mosher stated that the depression which set in eighteen months ago had affected the numerical strength of organized labour, and "that the advances reported by the 'foreign' unions in Canada are purely fictitious; but it has been the practice of those unions ever since the All-Canadian Congress of Labour was formed to claim huge gains in membership each year after a steady decline of seven years' duration," notwithstanding "that Canadian unions have unquestionably taken over a considerable portion of the 'foreign' unions' membership in recent years." He expressed the view that "there is cause for satisfaction in the growing development of national sentiment in this country." The president closed his address by declaring: "We must go forward, facing the new tasks which every day brings in a spirit of the utmost confidence in the future of our movement, of our country, and of the workers the world over who are striving earnestly to usher in a better social and economic order."

The address of the president was later adopted on recommendation of the Committee on Officers and Executive Boards Report.

The civic welcome to the delegates was extended by Mayor W. H. Malkin.

Committees were appointed as follows: (1) Rules and Order; (2) Officers and Executive Board's Reports; (3) Constitution and Laws; (4) Resolutions; and (5) Ways and Means.

Report of Treasurer

The report of the secretary-treasurer, as audited by the official accountant, showed total receipts of $22,750.66 with disbursements of $20,686.65, leaving a surplus for the year of $2,064.01. The report, which was referred to the Committee on Officers and Executive Board's Reports, was subsequently adopted, as was also the report of the executive board, a synopsis of which follows:

Report of the Executive Board

The executive board under the heading of the "Position of Labour in Canada" referred to (1) its demand in November, 1929, for an industrial conference to avert a general reduction in employment; (2) how the Government of the day had been defeated; (3) how legislative provision of twenty milion dollars had been made since for relief of the unemployed; (4) how "the awakening of the national conscience to the plight of Canada's workers has been accompanied by a recognition of the need for a 'Canada first' policy in public affairs;" (5) how in many directions there is evidence that the majority of the members of "United States" unions in Canada are dissatisfied with the practice of paying tribute to those who direct their affairs from abroad; (6) how a vice-president of the Trades and

Labour Congress of Canada had charged that one of the aims of the American Federation of Labour, functioning in Canada through subsidiaries, is to keep the Canadian workers from acquiring means of political expression; (7) that the need of political representation for the labour movement has never been more urgent than it is at the present stage of Canada's economic development; (8) how the presence of branches of United States labour unions in Canada is primarily due to the desire of the parent bodies to levy tribute on the wages of Canadian workers; (9) how the falsity of the position of United States unions in Canada results in their having not only to adopt the camouflage of a bogus internationalism, and in measures to restrain labour's participation in political affairs, but also to "resort to shady practices to bolster up an anomalous and otherwise untenable position;" (10) that the All-Canadian Congress is fundamentally right in its conception of the proper limits of union effort and is closely concerned with the problem of union structure; (11) how its chief function is to promote the better marshalling of labour's forces on the industrial field, but that it may from time to time urge upon governments the claims of the workers for particular measures of social reform; (12) that the contention that economic organization of labour must disregard craft divisions wherever possible, and that the scope of union effort must conform to the limitations of the political state, places the congress on unassailable ground.

Under the heading of "Membership and Organizing" it was reported that the membership of the congress had increased appreciably by the growth of the affiliated national unions and the chartered local unions, there being eleven of the first named and 29 of the latter, as well as twelve labour councils.

Referring to the organizing policy of the Congress, the board pointed out the value of the labour councils in furthering the national labour movement. Attention was called to the tendency of local unions of particular crafts to join forces and form national unions. In this connection the board recommended that no national union be permitted to affiliate with the Congress unless it can demonstrate its ability to meet the necessary financial responsibilities.

Under the caption of "Social Reform Legislation" the executive board reported that the federal and provincial governments had been urged to extend the existing "incomplete" series of social insurance schemes. Regarding relief for unemployment the board recommended a continuance of the effort to secure full recognition by the Dominion Government of its responsibility towards the unemployed, and that every opportunity be taken to impress upon the various governments and upon industry in general the need for an immediate shortening of working hours which shall not be accompanied by a reduction in earnings.

The board recommended a continuance of the advocacy of national unemployment insurance on a non-contributory basis, the scheme to include all classes of wage-workers, and to be associated with insurance against sickness and invalidity. The board expressed gratification with the Dominion Government undertaking to assume the whole cost of old age pensions and stated that in any extension of the Old Age Pension Act the blind should be included.

Referring to protection of the right to organize the board pointed out that it has been impressed upon the organized workers by judicial decisions that their unions are without legal standing and that agreements entered into collectively with employers are unenforceable at law. A determined effort, the board stated, is imperative to remedy this state of affairs by securing legislation to remove organized labour's legal disability. The board held that in any codification of the accepted moral law of industrial relations the three following principles should prevail:

1. That the workers have the right to belong to the organization of their choice.

2. That the organization embracing the majority of the workers in any class, craft, or category in an industrial establishment has the right to be regarded as the representative organization for such class, craft, or category, and as such should be a party to any rules affecting wages and working conditions.

3. That no agreement entered into by the representatives organization should deprive the members of any other organization of their existing rights and privileges nor exclude them from participating in any benefits that may accrue to the majority as the result of such agreement.

The board stated that among measures of social reform urgently needed in Canada the minimum wage for men stands second only to unemployment insurance in importance, and pointed out that as minimum wage laws rest with the provinces it is the duty of the labour organizations in the several provinces to advocate such legislation.

Under the heading of "The Need For Labour's Participation in Politics" the board declared that the congress "stands firmly opposed to the doctrine of 'United States controlled' unions that no political discussion can be permitted at union meetings." The board urges the unions to participate actively in

politics by supporting labour candidates financially as well as morally.

In regard to immigration and colonization the board reaffirmed its belief that only by a plan of settlement involving the development of self-sufficing communities, industrially complete, can the vacant spaces in Canada be satisfactorily filled up by a prosperous and homogeneous people.

Investigation of Price of Flour

The convention adopted a resolution "requesting that the Federal Minister of Labour investigate the activities of the Canadian National Millers' Association in regard to the present excessive price of flour."

National Registration Proposed

The convention rejected a demand for the registration of all Canadian citizens, the chairman of the Resolutions Committee, which reported against the proposal, stating that the resolution smacked of war measures. Subsequently a recommendation was reported by the chairman of the Committe on Officers' and Executive Board's Reports that a system of national registration of all people in Canada be advocated to provide the basis for an unemployment insurance scheme. On amendment the question was left for consideration by the executive board.

Constitution and Law

The Committee on Constitution and Laws recommended for consideration of the executive board a resolution proposing a change in the date of conventions in order to enable delegates to take advantage of summer excursion rates. The committee also reported favourably on a resolution seeking to establish provincial federations of unions, but it was not adopted by the convention. The committee approved of a resolution in favour of giving labour councils representation at conventions, but the proposal was also defeated.

The committee approved of a resolution to change the title of the affiliated labour councils to read The National Labour Council of (name of locality) of the All-Canadian Congress of Labour. It was decided to adhere strictly in the future to the provision in the constitution that no resolutions be considered unless bearing the seal and signature of the officers of the local union or branch presenting such resolutions, and further that no resolution involving a change in the constitution be considered unless submitted 30 days prior to the convention.

Other Resolutions Adopted

Besides the resolutions above mentioned others on the following subjects were adopted:

Placing of an organizer in the western provinces.

Condemning the use of paint-spraying machines.

Endorsing the practice of issuing a quarterly work button.

Urging the Government to operate its own radio stations through the radio branch of the Department of Marine.

In favour of securing a re-valuation of the Canadian National Railways so as to place the railways on a fair competitive basis.

That national unions be accorded the same privileges as "United States" unions in Canada with respect to representation on Government advisory bodies and delegations.

That the congress consider the formation of a labour defence department to assist workers who become involved with the authorities.

In favour of the Government assisting the shipbuilding industry, and that amendment of the Canadian coastwise shipping laws be sought to prevent the carriage of goods or passengers by water for the whole or any part of the distance from one part to another in other than British ships built and registered in Canada.

That the executive board of the congress consider and report on the formation of a labour party among all-Canadian unions.

That the several provincial governments be petitioned to embody in their respective workmen's compensation acts the following provision: "If a workman who has so far recovered from his injury as to be fit for work of a certain kind proves to the satisfaction of the board that he has taken all reasonable steps to obtain, and has failed to obtain such employment, the board shall order that his incapacity shall, for the purposes of the Act, continue to be treated as total incapacity."*

Endorsing the efforts of local labour bodies to secure a widening of the scope of workmen's compensation legislation.

On the last day of the convention reference was made to "the efforts of a foreign-controlled union of musicians to secure a monopoly of Canadian broadcasting stations." A report by the committee which had interviewed the proprietor of a local station was "that the attempt to intimidate the broad-

*See "Legal Decisions Affecting Labour," at the end of this issue.

cast station had been overcome and the committee had been assured of co-operation by the owner with the Musicians' Union of Canada."

Officers Elected

The following officers were elected: President, A. R. Mosher, Ottawa; vice-presidents, Z. David, Montreal, and Johnston McKinlay, Vancouver; other members of the executive board, G. W. McCollum, Toronto; T. McGregor, Winnipeg, and H. Burgess, Vancouver.

The convention for 1931 is to meet in Montreal in the month of November.

NOTES ON LABOUR UNION ACTIVITIES

Journeymen Barbers' Federation of Ontario

The Journeymen Barbers' Federation of Ontario held its fifteenth annual convention at Brantford, on November 10, 1930. Mayor Beckett, on behalf of the city, extended a welcome to the delegates. During the afternoon session Hon. W. G. Martin, Minister of Public Welfare in the Provincial Government, addressed the convention, assuring the delegates that their suggestions and requests in connection with legislation would receive sympathetic consideration. Mr. H. J. Halford, third vice-president, and Mr. P. H. Reagan, fourth vice-president of the Journeymen Barbers' International Union, also gave addresses.

The secretary-treasurer referred in his report, to a new clause that had been added to the constitution of the International Union, providing that when five or more local unions in any state or province affiliated into a state or provincial barbers' association, all local unions should be required to affiliate with such an association. This the secretary believed would be of considerable benefit to the barbers of Ontario. Reference also was made to the efforts put forth to have legislation enacted regulating the operation of barber shops and hairdressing establishments, which finally resulted in the passing by the Provincial Government of an amendment to the Public Health Act, which gave city and town councils authority to pass by-laws governing the operations and licensing of these establishments, and power to revoke licences upon any breach of regulations. Such by-laws must be approved in writing by the Department of Health before becoming effective. The secretary informed the delegates that further efforts were being made to have this law replaced by a bill formulated by the Federation, but he urged the delegates to re-indorse the stand taken at the last convention, that no bill should be suggested to the government until such time as the finances of the Union warranted such action.

Among the resolutions adopted were the following: That a licence law be introduced at the next session of the provincial legislature which would provide for the registering and licensing all barbers in the province and for regulating the sanitary conduct of barber shops;

Authorizing the collection of at least two dollars from each barber, all moneys to be forwarded to the legislative committee of the organization;

Pledging support to James C. Shanessy as general secretary-treasurer of the Journeymen Barbers' International Union.

Officers elected were: president, P. C. Hollier, Hamilton; first vice-president, George Lewis, Toronto; second vice-president, G. Gould, Windsor; third vice-president, Arthur Last, Sarnia; fourth vice-president, George MacDonald, Ottawa; fifth vice-president, W. Geraldi, Kingston; secretary-treasurer, A. Call, St. Catharines.

The 1931 convention will be held in Ottawa, on civic holiday.

International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America

The fifteenth consolidated convention of the International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America was held at Kansas City, Missouri, September 8-20, 1930, with 246 delegates present representing 207 local unions. Following the formal opening a motion was adopted recommending that the convention resolve itself into a committee of the whole to hear and consider the appeal of Joseph A. Franklin against the action of the executive council in removing him from the office of international president for alleged violation of the constitution and by-laws of the brotherhood. On a roll call vote of 394 to 167, a motion was adopted declaring the action of the executive council to be illegal, unlawful and in violation of the constitution and by-laws of the organization, and therefore null and void. President Franklin assumed the

chair following the adoption of a motion restoring him to his former position.

One hundred and twenty-nine separate resolutions were introduced and dealt with by the convention.

The committee on officers' reports made the following recommendations; (1) that the executive council, in conjunction with other organizations, adopt such a program as will eliminate company unions; (2) that the executive council be instructed to plan a more extensive organizing campaign; (3) that the brotherhood officers co-operate in the work of relieving the unemployment situation; (4) that welding be maintained as part of the craft and that every effort be made to prevent welders from becoming a separate organization or from joining any other affiliated department of the American Federation of Labor; (5) that the utmost efforts be made to curb the use of injunctions in labour disputes; (6) that the members support candidates for public office who are favourable to organized labour.

The name of the organization was changed to "The International Brotherhood of Boilermakers, Iron Shipbuilders, Welders and Helpers of America."

The committee on the official journal recommended that this publication be increased to standard size and that each local lodge have a special correspondent to report its activities.

Chief officers elected were: president, Joseph A. Franklin, 522 Brotherhood Block, Kansas City; assistant president, J. N. Davis; secretary-treasurer, Charles F. Scott, 506 Brotherhood Block, Kansas City. Walter J. Coyle, Verdun, Que., and A. B. Page, Winnipeg, Man., were elected vice-presidents for the eastern and western sections of Canada, respectively.

Montreal, Que., was chosen as the next convention city.

Australian Council of Trade Unions

A special congress of the Australasian Council of Trade Unions was held at Melbourne in September, to consider among other matters, the problems of unemployment and of wage reduction and labour conditions.

The acting Prime Minister, Mr. Fenton, informed the delegates that the Government had no intention of lending itself to a policy of reducing wages and altering workers' standards of living. He stated that a sub-committee of the Cabinet had been appointed to deal with the whole financial situation in Australia and the question of unemployment. Until its report was published, the details of the policy to be pursued could not be announced.

The Council adopted the following proposals:—

The provision of work depends almost entirely on freeing the credit resources of the country. As a first contribution in this direction, the Federal Government should find £20,000,000.

An Economic Council should be set up, with equal representation of workers and others, and with a Minister as chairman, to determine the allocation of the credit.

The Federal and State Labour Governments should repudiate the decision of the Premiers' Conference which called for a reduction of wages and a lowering of the standard of living.

The Federal Government should instruct the Prime Minister to take this, the first opportunity afforded a Labour Prime Minister to negotiate with the British Government with a view to readjusting the burden of indebtedness now borne by the Australian people as a result of her participation in the late war.

An outstanding fact to-day is that money is too dear. Legislation should be introduced immediately to bring about a reduction in all interest rates in order to make available to industry cheaper money.

Further, to reduce costs of production, the Federal and State Governments should introduce legislation to provide for (*a*) the "dewatering" of the bonus shares issued by companies, and to compel the share issues to synchronize with up-to-date revaluations, such revaluations to be under Government control; and (*b*) a limitation of dividends paid by companies, particularly those companies operating in vital industries.

The Emergency Committee was empowered to call a further Conference of all Unions to take action to have the decisions of that Conference endorsed.

The Land Settlement Branch of the Department of Immigration and Colonization during the six weeks ending November 30, placed 1,108 previously unemployed men with farmers throughout Canada. The Hon. W. A. Gordon, Minister of the Department adopted this policy on October 15 as a contribution towards the solution of the unemployment problem. "The farmers throughout Canada who are in a position to employ help, are co-operating with the government in splendid manner," the minister stated on December 12: "the farmers are playing their part and the department in turn is endeavouring to select the most suitable men to meet their needs. Present indications point to further substantial numbers being placed during the next few weeks."

LABOUR'S INTEREST IN ACCIDENT PREVENTION

The Hon. Senator Robertson, Minister of Labour, was one of the speakers at a public meeting held at Ottawa on November 26 under the auspices of the Industrial Accident Prevention Associations of Ontario. Addresses were given also by Colonel C. A. Hodgetts, C.M.G., director general of the Saint John Ambulance Association, and Mr. P. M. Draper, secretary treasurer of the Trades and Labour Congress of Canada.

The gathering speed of industrial processes was referred to by the Minister of Labour as now being a large factor in industrial accidents. These continued to happen notwithstanding the efforts of safety organizations, and the protective devices required by legislation. However, he fully recognized the value of the safety movement and regarded the increasing dangers of industry as an incentive to redoubled effort.

Senator Robertson began his address by showing the serious losses incurred both by workers and by employers through industrial accidents. For a workman, he said, an accident may mean laying off work for a time with loss of wages, perhaps the loss of a job, or, after recovery, the return to work with some permanent injury handicapping him more or less for the rest of his life. The employer also felt the burden of industrial accidents as a serious disturbance of production and one of the principal factors in costs.

Turning to legislative measures enacted for the protection of workers, the minister described the provisions of some of the provincial acts for the regulation of work in factories and mines. Such legislation laid down certain conditions as to the persons who may be employed, the minimum age of employment, the maximum hours of work, and sanitary and safe conditions. Public opinion later insisted that the state should require industry to assume responsibility for all accidents to their workmen, whether or not the workman in each case should be shown to have been negligent. Accordingly, workmen's compensation laws were adopted by most industrial countries in the world. The payment of compensation, he said, has relieved the worker of a large part of the money cost of an accident, ensures him a portion of his wages during the time of disability or, in case of a fatal accident, means that the wife and children are provided for in some measure.

The minister referred to the system of "merit rating" by which the rise and fall of accidents in a group of industries is reflected in the assessments levied upon the group by the Workmen's Compensation Board. This provision, combined with the general humanitarian interest of employers in the prevention of accidents, had given an impetus to the organized safety movement.

In the course of his address Senator Roberfson commented on the following tables showing the estimated number of workers employed in the various industries in Canada in 1929 and 1930, and the number and relative proportion of fatalities in each group:

FATAL ACCIDENTS TO WORKMEN IN 1929 BY INDUSTRIES

—	Fatal accidents	Per cent of total
Transportation and public utilities	353	21
Construction	289	17
Manufacturing	236	14
Mining and smelting	226	13
Logging	217	13
Agriculture	152	9
Service, including Government service and personal services of different kinds (police, fire and other)	108	6
Trade	50	3
Finance	1	.....

—	Estimated number employed	Fatal accidents during 3rd quarter	
	1929	1929	1930
Agriculture	1,041,618	52	35
Logging	39,815	29	22
Fishing and trapping	62,785	16	6
Mining, smelting and quarrying	119,448	52	92
Manufacturing	596,052	59	33
Construction	185,202	95	86
Electric light and power	.....	.....	19
Transportation and public utilities	325,586	91	89
Trade	310,439	16	16
Service—including police, firemen, etc.	547,073	41	44
Finance	61,301	1	1
		452	443

The Minister concluded his address with a reference to the safety work of the International Labour Organization. The prevention of industrial accidents was one of the subjects discussed at the Conferences of 1928 and 1929. The latter conference adopted a "recommendation" on the subject, which was to be submitted to the State Members of the League of Nations with a view to effect being given to it by legislaion in the countries concerned. (The text of this recommendation was given in the LABOUR GAZETTE, July, 1929, page 763.)

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Safety League for Saskatchewan

A Safety League for Saskatchewan was organized at a meeting held at Regina on November 3, following a conference between members of the provincial government and representatives of the cities and clubs of the province. The officials of the new organization are as follows:—

Honorary president: the Hon. H. W. Newlands, Lieutenant Governor of Saskatchewan.

President: Hon. A. C. Stewart, Minister of Highways.

Hon. vice-presidents: Premier J. T. M. Anderson, Hon. M. A. MacPherson, Hon. J. A. Merkley, Hon. F. D. Munroe, and Hon. F. R. MacMillan, M.P.

Vice presidents: His Honour Judge W. O. Smyth, Swift Current; Mr. Sydney Smith, Regina; Mr. Richard Loney, Moose Jaw; Mr. Ralph Miller, Prince Albert; Mayor L. A. C. Panton, North Battleford; C. H. Garner, Weyburn; Mayor John W. Hare, Saskatoon; Mayor Robert Barbour, Yorkton.

Secretary, Mr. J. D. MacDonald, Regina.

Industrial Health Record for 1930

According to the *Statistical Bulletin* published by the Metropolitan Life Insurance Company, never before have such satisfactory health conditions prevailed in the United States and Canada as during the first nine months of 1930. The mortality record of approximately 19,000,000 persons (the industrial policy-holders of the Company) indicates this clearly. This group constitutes about one-seventh of the population of the two countries, and in the past its death rate has proved to be an accurate index of health conditions in the entire population. The death rate during 1930, to date, has been low in all parts of Canada, where approximately a million and a quarter of the Metropolitan industrial policyholders live. In neither the United States or Canada has there been wide-spread epidemic prevalence of any disease so far this year.

Nineteen thirty moreover, bids fair to be a year of best records, not only in the low mortality rate for all causes combined, but for several diseases which are of major importance—either numerically or in point of public health interest. The outstanding examples are tuberculosis, diphtheria, diarrheal complaints and puerperal conditions. The typhoid fever death rate, also, is running lower than ever before.

Plans for a Safety Campaign

The Construction Division of the Province of Quebec Safety League makes the following suggestions for carrying out a program of safety instructions:—

Many ideas have been originated and worked out successfully to educate the workers in accident prevention. They include:—Use of safety posters and designs; special safety instruction to new employees; suggestion systems; classes in safety and first aid; Prizes or bonuses for accident prevention; rules of safe practices; workmen's safety committees; special campaigns, such as "No accident week," "Clean-up Week," etc. Of course, it is not advisable to attempt to carry on too many of these activities at the same time. The educational program should provide variety, for one stunt that works well for several months or a year may then get stale and need changing.

Many suggestion systems which were started for the purpose of securing the assistance of the workmen in preventing accidents were later enlarged and the announcement made that suggestions on other subjects would be equally desirable. On many jobs, therefore, employees are encouraged to submit all suggestions which in their estimation will: decrease the danger of accidents to themselves or their fellow workers; eliminate fire hazards or increase the effectiveness of fire extinguishment methods and equipment; result in better working conditions; decrease waste of materials, power, space and labour; improve methods or processes and improve machines. The employees only need the assurance that any suggestions which they may make will be given careful and impartial consideration."

Impaired Health Rates of Occupational Classes

The United States Public Health Service recently published the report of a study of the relation of impaired health to occupations, based upon the medical examinations of more than 100,000 native-born adult white males, in various industrial groups, which was conducted by 9,000 different physicians in all parts of the United States. The association of economic or social status and health has been given consideration in the past, but such studies have related only to incapacity from sickness or to death. Up to the present time this picture has been inadequate because it has not included information as to the physical conditions of persons able to be about and at work—that

is, when the conditions which lead to sickness and possible death are in their incipiency. The groups used for the present study were (a) agricultural; (b) professional; (c) business; and (d) skilled trades. The age distribution of these four groups was practically identical. It should be noted however that the persons examined in connection with this inquiry were those who carried life insurance and had accepted the offer of insurance companies for free health examinations, and therefore that the health conditions prevailing in the lower social levels are not represented in the results.

In the skilled trade group, of the 16,714 persons analysed, 3,409 were classified as machinists, 1,985 carpenters, 1,577 tailors, 1,256 printers, 1,235 electricians, 998 plumbers, 836 chauffeurs, 834 barbers, 829 painters, 712 butchers, and 3,043 others. The rates of impairments in the group are excessively high for eye and ear conditions, teeth defects, heart and pulse, and many miscellaneous impairments.

For most conditions, the agricultural group would seem to have rates definitely below the average for all examined, but there are important exceptions, notably for teeth, stomach, and abdominal conditions, and the genito-urinary system. The rates are low for diseases of the eye and ear, nose and throat, heart and pulse, blood vessels, and many miscellaneous conditions.

The professional group conforms more nearly to the average for the entire population considered. The business group also approximates the average for the entire population considered in nearly every respect.

Fatigue as a Factor of Accidents

A new bulletin (Leaflet No. 30) issued by the Province of Quebec Safety League shows the importance of fatigue as a contributory cause of accidents. "By industrial fatigue we mean a certain strain, whether mental or physical, by which the attention of the worker becomes dulled towards his work as well as towards the risks that may be involved in his work. This fatigue or strain is peculiar to industrial workers. It has nothing to do with the wholesome fatigue of the farmhand or lumber-jack. This industrial fatigue may not be fatigue at all, if by fatigue we mean the need of rest, food and sleep. This industrial fatigue is generally the result of indoor work, of monotonous work, of work requiring concentration. Therefore the proper remedy is better air and ventilation, relaxation and rest periods, diversified work, mental and physical exercise. The average industrial worker doesn't need more food or more sleep or shorter hours. His body and mind are not taxed to their utmost; on the contrary they need precisely to be more thoroughly exerted and in a more diversified way.

"The indoor worker needs better air and it is today possible, at a really insignificant cost, to produce perfect conditions of ventilation in the work-rooms. We consider that this lack of good breathable air is in a great measure responsible for industrial fatigue. And the proof is that industrial fatigue, as we have defined it above, does not exist among outdoor workers.

"It is today accepted that the mechanical properties of air, its heat, dampness and movement, are much more important to health than its chemical purity. In the average work-room, the air always contains more than enough oxygen for breathing purposes. But as a rule the air is either too warm, too dry or too sluggish. Means must and can be found to insure the right degree of heat (about 68 degrees), the right proportion of humidity and a certain movement of the air. A variation in temperature from time to time is also good to give proper stimulation to the pores of the skin.

"Where the work requires constant attention and where the task is repetitive and monotonous, the administration will find it economical from all points of view to arrange rest periods, such as are at present established in many large American industries. These rest periods may be rendered more diverting and healthful if certain setting-up exercises are arranged for that time and carried out regularly. The rest period and exercises should be, of course, compulsory."

Occupational Cancer

Dr. Imre Heller, writing in a recent number of the *Journal of Industrial Hygiene*, deals with occupational cancer. "It was ascertained," he states, "that 32·4 per cent of the total cases of cancer occurring among workers exposed to coal tar were on the hands, while only 10·8 per cent were on the scrotum. The cancers were caused in 54 per cent by pitch; in 35·1 per cent by tar; and in 5·4 per cent by heavy tar oil. Gas works tar and pitch were responsible for 70·2 per cent of the cases while only 5·4 per cent were due to coke oven tar and pitch. In 10·8 per cent a mixture of the two, and in 5·4 per cent heavy tar oil was the material with which the men had been working. Coke oven tar would appear to be less injurious than gas works tar. The olefin content of gas works tar is one of the chemical characteristics which distinguishes it from the less injurious

coke oven tar. That lubricating oils and other oils have no carcinogenic properties is explained on the ground of the effect of sulphuric acid on the cancer producing substance of the oil."

"The Occurrence of Pulmonary Fibrosis and Other Pulmonary Affections in Asbestos Workers" is described in the same periodical by Dr. E. R. A. Mereweather, as follows: "The symptoms resemble those of fibrosis. The commonest symptoms are cough, cyanosis, dyspnoea, expectoration, and pain. Fibrosis of the type produced by asbestos dust can of itself lead to complete disablement, and finally to a fatal termination, even in the absence of a superadded tuberculous infection."

Reasons for High Cost of Funerals

A report on "funeral costs" was recently published as Number 3 of a series of miscellaneous contributions on the cost of medical care by a committee organized at Washington, D.C., to study the economic aspects of the prevention and care of sickness. The writer, Mr. J. C. Gebhart, sums up the results of the new investigation in regard to funerals as follows:—

"Excessive funeral expenditures in this country are due chiefly to two factors: (*a*) the desire on the part of the family for an elaborate funeral, either as a token of respect and affection for the departed, or to satisfy the demands made by the conventions or social and religious traditions of the group, or 'to impress the neighbours,' and (b) the lack of organization and waste in the funeral industry. Even the extravagant charges on the part of certain undertakers are largely due to an effort to make a living out of a very small volume of business.

"In general, operating costs and prices to the public are lower in 'complete' establishments doing a large volume of business than in establishments with small volume.

"It is apparent that funeral prices cannot be greatly lowered until the volume of business, which is fixed by the death rate, is concentrated in fewer hands. This applies both to funeral directors and to manufacturers of burial goods."

Work of International Labour Office in Regard to Unemployment

The decision of the Governing Body of the International Labour Office at its 50th session to undertake a special inquiry as to the best methods to be taken for the reduction of unemployment throughout manufacturing centres of the world was noted in the LABOUR GAZETTE, November, 1930, page 1300. In the debate on the proposal Mr. Albert Thomas, the Director of the Office pointed out that it did not involve breaking any fresh ground for the Office. For the last ten years, he said, the Office has been concerned with unemployment and has done useful work in that field. As early as 1919 a Convention was adopted dealing with unemployment data to be communicated to the Office, and with the desirability of setting up systems of free employment agencies. There has been a Recommendation in favour of the creation of systems of unemployment insurance. When the Office began its work two countries only had set up national systems of unemployment insurance; a few others had voluntary assistance. To-day ten States have organized compulsory insurance and 43 million workers throughout the world benefit thereby. Turning to the scientific aspect, he went on to say that there have been a whole series of studies published by the Office, besides the regular publication of statistics, a Bibliography of Unemployment, etc. There were the two general reports presented to the International Labour Conference in 1922 and 1929, each of which led to the adoption of various resolutions. In this connection Mr. Albert Thomas mentioned that the Office will shortly publish a volume dealing with the large scale public works undertaken in various countries to combat unemployment. In this way, he said, the International Labour Office could usefully contribute its resources to combat social evils, to discover the truth, to dissipate misconceptions and to investigate new theories.

The Association of Railway Executives in the United States decided at their annual meeting held in New York on November 20, notwithstanding adverse earnings reports, to continue the policy of development adopted at the suggestion of President Hoover a year ago. The association reported that capital expenditures of the class 1 railroads of the country for new equipment and additions and betterments to railway property were the largest during the first nine months of 1930 for any corresponding period since 1923. Capital expenditures to the 1st of October totalled six hundred and ninety-eight million eight hundred and twenty-one thousand dollars, an increase of one hundred and twenty-five million and one thousand dollars over the first nine months of 1929.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Age of Children in Non-Industrial Occupations

THE International Labour Office has issued a report on the age of admission of children to employment in non-industrial occupations, which is the first item on the agenda of the 1931 Session of the International Labour Conference. In an introductory note it is pointed out that the protection of children and young persons is among the objects set before the International Labour Organization by the Preamble to Part XIII of the Peace Treaty, and that the sixth of the guiding principles laid down in Article 427 of the Treaty is "the abolition of child labour and the imposition of such limits on the labour of young persons as shall permit the continuation of their education and assure their proper physical development."

The note goes on to recall that the International Labour Conference has already adopted (1919-1921) successive Conventions fixing at fourteen years the minimum age for admission of children to industrial employment, to employment at sea, and to agricultural employment, and at eighteen years the minimum age for employment as trimmers and stokers. These Conventions have met with considerable success; but there is still a serious gap in international legislation, since no provision has yet been made for the age of admission of children to non-industrial occupations, in certain of which they may be exposed to grave dangers. It is with a view to filling this gap that the Governing Body of the International Labour Office has placed the question on the agenda for the Conference in 1931. At that session the Conference will be called on not to adopt concrete proposals in the form of a Draft Convention or Recommendations, but to make a preliminary study of the problem and determine whether it should form the subject of further discussion and definite decisions at the ensuing session. Should the Conference so decide, it will be required at the first discussion to define a number of specific points on which the opinions of Governments should be collected by way of a questionnaire in preparation for the second and final discussion.

In accordance with established practice, the report now issued embodies a succinct analytical and comparative account of the present law and practice in the different countries in connection with the question under consideration, and includes a number of tabular statements showing the situation at a glance. On the basis of the legislation so presented, the report proceeds to consider the feasibility of international regulation and draws attention to the chief points on which it might be desirable that Governments should be consulted before the decisive stage is reached.

The report, in itself a compendious work of reference on child employment in those occupations (commercial and office work, street trading, public entertainment, etc.) which come under the term "non-industrial," is intended to pave the way for an effort to continue and extend the work on behalf of children which has already been undertaken by the International Labour Organization during the past ten years.

Hours of Work in Coal Mines

The International Labour Office recently issued the text of the questionnaire which is being addressed to the Governments of the States Members of the International Labour Organization on the subject of hours of work in coal mines, with a view to the drafting of a Convention for discussion at the fifteenth session of the International Labour Conference, to be held in May, 1931.

It may be recalled that the Governing Body of the Office decided at its recent session that the Conference should itself determine whether the discussion of this question at the fifteenth session should be regarded as a first or second discussion, but that since the problem had already been examined at the fourteenth session the Office should allow for the possibility of a decision in favour of a second discussion, by circulating a questionnaire to the Governments and drafting a report containing one or more proposed Conventions based on the replies of the Governments.

The text of the questionnaire is accompanied by an introduction explaining the origin of the question and reproducing the report of the committee set up to deal with this subject at the fourteenth session of the Conference. A summary is also given of the discussion which took place on this report in the plenary Conference, followed by an analysis of the present position of the question and a commentary on the questionnaire.

Colombia Accepts Labour Conventions

The Government of the Republic of Colombia has intimated to the International Labour Office that it has recommended to Parliament

the ratification of the twenty-six Conventions that had been adopted by the International Labour Conference at its sessions from 1919 to 1928, inclusive.

Colombia, it may be observed, has been represented at almost every Session of the Conference, though so far its delegation has not included direct representatives of employers or workers. The reason for this incompleteness, as given to the Credentials Committee of the Conference in 1925, was the absence of representative organizations of industrial employers or workers in Colombia, which is predominantly an agricultural country and has not yet attained an advanced stage of industrial development. The Colombian Government, however, has not failed to follow the efforts of the International Labour Organization with interest and sympathy, as was demonstrated in 1921, when its delegate strongly opposed any attempt to exclude agricultural labour from the scope of the Organization, and again last year, when its delegation warmly supported the abolition of forced labour.

The desire of the Colombian authorities, as of those in other countries which are in a similar stage of industrial development, would appear to be to profit by the experience of countries which are older, industrially, and in so far as it is possible to do so by considered progressive measures, to forestall the unrest and agitation for social legislation which usually accompany the spread of class-consciousness and the growth of trade unionism. It was in this spirit that the ratification of the Conventions of 1919-1928 was suggested just two years ago in a report by an advisory committee attached to the National Labour Department. The views expressed by that committee, translated as they have now been into definite action by the Government, afford a welcome sign of the awakening of the Latin-American countries to the obligations entailed by membership of the International Labour Organization, and to the advantages they may derive from the fulfilment of these obligations.

Collective Agreements of Agricultural Workers in Germany, Austria and Hungary

A report published recently by the International Labour Office deals with the law in Germany, Austria and Hungary respecting collective agreements of Agricultural workers.

Landworkers almost everywhere receive wages barely equivalent to those of the most poorly paid industrial worker; and they do not benefit, at any rate to the same extent, from labour protection legislation and the various forms of social insurance. Their legal status as workers is also found to be less favourable in general than that of other wage-earners.

In a number of countries the inferior status of agricultural workers results from the fact that they can only avail themselves of the general or common law, whereas industrial workers are able to avail themselves of special protective legislation. Wherever special provisions are drawn up for agricultural labour, they approximate to those which govern the position of domestic staffs; the result being that such special provisions only apply to agricultural workers who live in the same house as their employer. In this respect, the legal provisions which are found to exist in Germany, Austria and Hungary present a special interest, since they not only apply to farm servants but to all wage-earners whatsoever employed in agriculture. In addition, the legislation of these three countries is, so to speak, in a transitional stage between the past and the future; a number of its provisions can only be considered as antiquated, but there are to be found evidence of a genuine effort to introduce modern conceptions of labour law in the realm of agriculture. Its significance therefore lies in the fact that it constitutes a first step towards a modern conception of agricultural labour legislation.

Mr. Hylton R. Brown, chemist of the United States Department of Agriculture in an address to the American Society of Mechanical Engineers on December 3, stated that starch, sugar or chocolate in the form of factory dust can be dangerous as dynamite. Danger of dust explosions in factories has been increased, he said, by modern changes in manufacturing processes, and by the utilization of by-products. Dust of many commodities, when mixed with air and then ignited in a confined space, will explode with force comparable to the grain dust explosions that have wrecked concrete and steel buildings. Professor Elliott Dunlap Smith of Yale University, speaking at the same meeting said that society had not yet learned to utilize to the full the opportunities or to curtail the dangers which technological advance has brought about. It was the duty of the engineer to see that the new instrument he had created and that was remodeling the world was wholesomely employed.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN OCTOBER, 1930

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on November 1, was 7,406, their employees numbering 993,817 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for October was 1,780, having an aggregate membership of 207,433 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 67 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

(1) Employment Situation at the Beginning of November as Reported by Employers

There was the customary seasonal contraction in industrial activity at the beginning of November, when the 7,406 firms furnishing employment returns to the Dominion Bureau of Statistics reported 993,817 employees, compared with 1,022,184 on October 1. Reflecting the reduction, the index number declined from 116·2 in the preceding month to 112·9 on the date under review, as compared with 124·6, 118·9, 108·8, 104·0, 98·3, 94·1, 100·0, 97·0 and 91·3 on November 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The recession at the beginning of this November was greater than the average decline reported on November 1 of the last ten years; this was partly due to the fact that logging showed smaller gains than are usually registered at this time of year, thus failing to absorb so large a proportion as usual of the workers laid off in the other seasonal and outdoor industries. The staffs reported by employers, however, continue greater than in other years on record except 1929 and 1928.

Pronounced seasonal curtailment again took place in construction and manufacturing, while logging, mining and trade reported considerable improvement, also largely seasonal in character.

Employment by Economic Areas

The tendency was downward in all provinces, the greatest losses taking place in Ontario and British Columbia.

Maritime Provinces.—There was a further decrease in employment in the Maritime Provinces on November 1, 1930. Most of the reduction took place in manufacturing and construction, but losses were also indicated in logging, transportation and mining, while communications showed improvement. Returns were received from 561 employers, with 74,608 workers on their payrolls, or 4,184 less than at the beginning of October. A small gain had been indicated on November 1, 1929, when the index was higher.

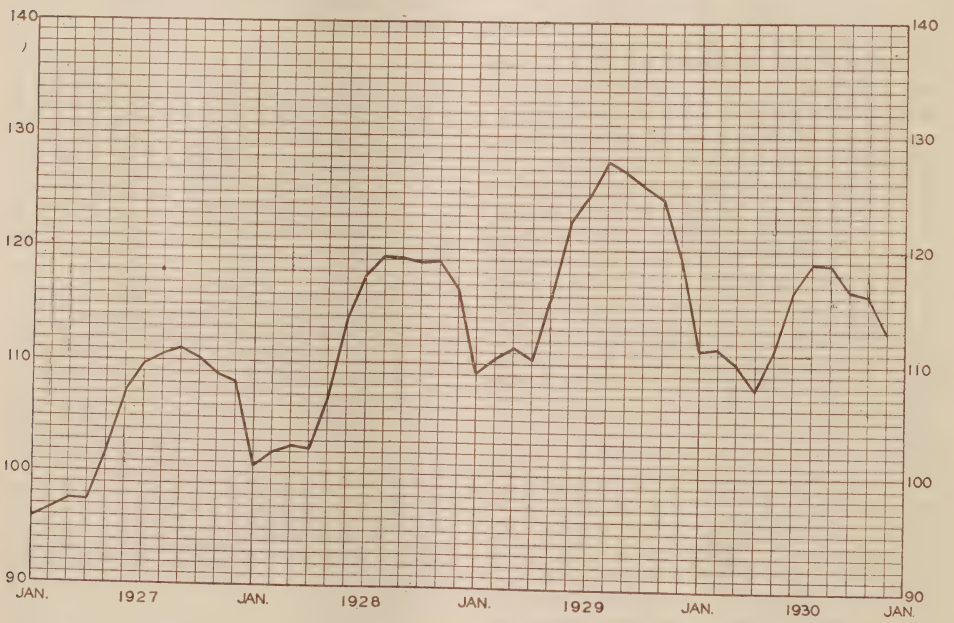
Quebec.—There was a further decline in Quebec, where the 1,703 co-operating firms reduced their staffs by 2,851 employees, bringing them to 285,288. Railway construction, trade and logging reported improvement, while highway and building construction, manufacturing and transportation registered curtailment. Within the manufacturing group, the lumber, pulp and iron and steel divisions showed most contraction, but textiles reported decidedly greater activity. Employment was in smaller volume than on the corresponding date in 1929, when increases had been indicated.

Ontario.—Employment declined in Ontario, where the situation, though not so favourable as on November 1, 1929 or 1928, was better than in the autumn of earlier years of the record, in most of which reductions were noted at the beginning of November. The most extensive recessions on the date under review were mainly of a seasonal nature in construction, transportation, canning, saw-milling and iron and steel plants, while textile factories, logging and retail trade were seasonally busier. A combined working force of 401,310

persons was registered by the 3,312 employers whose data were tabulated, and who had $412,620 on their payrolls in the preceding month.

Prairie Provinces.—As is usually the case at the time of year, there was a decrease in the Prairie Provinces on November 1, 1930, but the decline involved a smaller number of workers than that noted in the autumn of 1929, when the index was higher. Returns were compiled from 1,064 firms having 149,338 employees, as against 154,152 at the beginning of October. Coal and metallic ore mining and retail trade afforded considerably more employment; on the other hand, manufacturing, construction, transportation and services showed contractions.

Table I gives index numbers by economic areas.



Employment by Cities

Additions to staffs were registered in Windsor and the adjacent Border Cities, while in Montreal, Quebec city, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver there were reductions, Montreal showing the largest decline.

Montreal.—The trend of employment in Montreal was downward, 1,825 persons having been let out from the staffs of the 939 co-operating firms, who employed 140,818. Manufactures, as a whole, transportation, construction and services reported reduced activity, while there were seasonal gains in retail trade;

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

British Columbia.—Further declines in personnel were recorded by the 766 employers furnishing returns in British Columbia; their staffs aggregated 83,273 workers, compared with 88,481 in the preceding month. The greatest losses were in manufactures and construction, but transportation and services were also slacker; on the other hand, coal-mining was rather more active. Employment was in smaller volume than on November 1 last year, when the movement was also unfavourable.

within the manufacturing group, there was also improvement in textile, musical instrument and lumber plants. Increases had been noted on November 1, 1929, when the index was several points higher.

Quebec City.—Employment showed a decrease in Quebec, according to 122 employers of 13,686 persons, compared with 14,009 on October 1. Transportation, services and manufacturing showed curtailment, while construction and trade reported slightly more activity. Employment as reported by em-

ployers continued in rather greater volume than on the same date last year, when gains had been indicated.

Toronto.—There was a falling-off in the number of workers on the payrolls of 1,022 firms in Toronto, who had 123,754 in their employ, or 889 less than in the preceding month. Most of the decline took place in construction, transportation and services, while manufacturing and trade were rather busier. A slightly larger loss had been registered at the beginning of November a year ago, but the index then was higher.

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

TABLE I—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS (AVERAGE CALENDAR YEAR 1926=100)

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
1921

Ottawa.—Almost all the curtailment in Ottawa was in manufacturing, construction and transportation, but retail trade showed slightly heightened activity. The 150 employers furnishing data reported 13,331 workers, as against 13,612 on October 1. Employment was in practically the same volume as on the same date in 1929, when contractions had also been indicated.

Hamilton.—Employment continued to decrease in Hamilton, where the 224 co-operating firms employed 30,812 persons, or 460 less than at the beginning of October. Most of the decline took place in manufactures, particularly in iron and steel, food and electrical apparatus plants, while textiles and non-ferrous metals showed improvement. Very little change had been reported on November 1 last

NOTE.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

year, but the index then was higher by many points.

Windsor and the Adjacent Border Cities.—Activity in the Border Cities showed an increase; 133 employers reported 14,346 persons on their payrolls, compared with 14,000 at the beginning of October. Improvement in automobile plants and highway construction caused the increase, which compares favourably with the decline indicated on the same date a year ago. Employment then, however, was much better than during this autumn.

Winnipeg.—Curtailment was noted in Winnipeg, according to 351 firms employing 32,769

NOTE.—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

workers at the beginning of November, as compared with 33,008 in their last report. Trade and building reported advances, but manufacturing and transportation released help. Improvement had been recorded on November 1, 1929, when employment was at a much higher level.

Vancouver.—There was a downward movement in Vancouver, when 302 employers had 30,067 persons on their staffs, or 390 less than in the preceding month. Manufactures and transportation showed most of the reduction, while trade and highway construction were more active. Employment was not so brisk as at the beginning of November last year, when smaller losses had been reported.

Index numbers by cities are given in Table II.

TABLE IV—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	[1]Relative weight	Nov. 1 1930	Oct. 1 1930	Nov. 1 1929	Nov. 1 1928	Nov. 1 1927	Nov. 1 1926	Nov. 1 1925

[1]The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

Manufacturing

Further shrinkage of a seasonal character was noted in manufactures, chiefly in the lumber and food-canning industries, although there were also losses in iron and steel, pulp and paper, leather, building material, electric current, electrical apparatus, non-ferrous metal, rubber and non-metallic mineral works. On the other hand, textile factories registered considerable advances and there were also gains in musical instrument and chemical plants. The 4,497 co-operating manufacturers reported 506,887 operatives, as against 522,677 at the beginning of October. This decline involved more workers than that shown on November 1 last year, when the index was many points higher.

Animal Products—Edible.—Dairies and fish canneries reported seasonal curtailment, while meat-packing plants afforded more employment. Statistics were received from 204 manufacturers, employing 18,840 persons, as compared with 19,464 in the preceding month. This contraction, which took place chiefly in the Maritime Provinces and British Columbia, was much greater than that registered on the corresponding date last year, when the index number was several points higher.

Leather and Products.—There was a falling off in employment in this group on November 1, chiefly in boot and shoe factories in Quebec and Ontario. The 188 firms furnishing data reported 14,832 workers, as against 15,592 on October 1. Activity was decidedly less than on the same date in 1929, when the trend was also downward.

Lumber and Products.—Further contraction, involving a smaller number of employees than in the autumn of last year, were indicated in the lumber group, in which employment was in less volume than in November, 1929. The losses on the date under review took place chiefly in rough and dressed lumber mills, but vehicle and container plants were also slacker, while furniture factories reported improvement. A combined working force of 44,288 persons was reported by the 769 co-operating manufacturers, as compared with 48,460 at the beginning of October. There were important contractions in all provinces.

Musical Instruments.—Considerable additions to staffs were indicated in musical instrument factories, 39 of which employed 2,362 workers, an increase of 218 over their October 1 staffs. Most of the gain was in Quebec. Employment was in smaller volume than at the beginning of November, 1929, when the tendency was also upward.

Plant Products—Edible.—Fruit and vegetable canneries made unusually large seasonal reductions in their payrolls, while sugar and syrup factories showed an advance. The forces of the 398 reporting firms aggregated 33,862 persons, or 6,981 less than in their last return. Employment declined in all provinces. This curtailment involved many more workers than that registered on the corresponding date in 1929, when the index number was rather higher than on the date under review.

Pulp and Paper Products.—There was a large decrease in the number reported by employers in this group, 541 of whom had 63,539 workers on their payrolls, as compared with 65,038 at the beginning of October. Important reductions were recorded in pulp and paper mills and paper products, while gains were noted in printing and publishing houses. The tendency was unfavourable in all provinces, except British Columbia. Slight gains had been indicated at the beginning of November a year ago, and the index then was several points higher.

Rubber Products.—Employment in rubber goods showed a recession on November 1; data were compiled from 39 firms with 13,498 employees, as against 13,766 in their last report. This decrease took place chiefly in Quebec. Employment was at a lower level than on November 1, 1929, when reductions had also been indicated.

Textile Products.—Thread, cotton, woollen, silk and hosiery and knitting factories reported heightened activity, but the production of garments, personal furnishings and headwear showed a falling-off; 695 manufacturers enlarged their payrolls from 79,882 on October 1 to 81,553 on the date under review. There were large increases in Quebec and Ontario. A slight gain had been noted at the beginning of November last year, when the index was higher than on the date under review.

Tobacco, Distilled and Malt Liquors.—There was very little change in employment in these industries as a whole, according to the 147 establishments furnishing statistics, which employed 16,242 persons. Improvement in tobacco factories was offset by losses in the manufacture of beverages. Small gains had been indicated on the corresponding date last year, and employment then was in slightly greater volume.

Chemicals and Allied Products.—Advances were recorded in this group, in which statements were furnished by 121 plants employ-

ing 7,635 persons, or 115 more than in their last report. Activity was less favourable than in the autumn of 1929, when similar increases had been reported.

Clay, Glass and Stone Products.—Seasonal curtailment was indicated in building material plants, chiefly in Quebec, Ontario and the Prairie Provinces; employment generally was at a lower level than on November 1, 1929. The forces of the 163 employers from whom information was received, declined by 480 persons to 12,724 at the beginning of November.

Electric Current.—Employment in the production of electric current showed a contraction, 311 workers being released from the forces of the 92 co-operating manufacturers who employed 15,809 persons. Greater declines had been indicated in this industry on November 1 last year, but the index then was above its level at the time of writing.

Electrical Appliances.—Curtailment was reported in electrical apparatus works, 63 of which had 16,461 employees, or 295 less than in their last report. This decline compares unfavourably with the advance noted on the same date last year, when the index number was some points higher.

Iron and Steel Products.—The crude, rolled and forged, vehicle, agricultural implement, and some other divisions of the iron and steel group registered reduced employment, while there were minor increases in the shipbuilding, heating appliance and foundry and machine shop groups. Statements were received from 714 manufacturers whose payrolls aggregated 125,207 persons, as compared with 127,013 in the preceding month. Employment declined in all except the Maritime Provinces and British Columbia, the losses in Ontario being most noteworthy. Much more extensive curtailment had been indicated at the beginning of November last year, but the situation then was decidedly more favourable than on the date under review.

Non-ferrous Metal Products.—Data tabulated from 115 firms in the non-ferrous metal group showed that they employed 20,044 workers, or 292 less than on October 1. The precious metal division recorded improvement, while losses were registered in smelters and refineries and lead, tin, zinc and copper works. Employment was not so active as on the same date of 1929, when additions to staffs had been reported.

Non-metallic Mineral Products.—There was a decline in employment in non-metallic mineral product factories, 83 of which released 265 persons, bringing their staffs to 12,983 at the beginning of November. All except the Western Provinces shared in the reduction. The index was considerably lower than on November 1, 1929, when a small loss had been indicated.

Logging

Statistics were tabulated from 213 firms employing 24,286 men, or 5,400 more than in the preceding month. This advance was decidedly smaller than usual, and employment was in less volume than in the autumn of any other year since 1920. Quebec and Ontario shared in the upward movement, while small losses occurred in the other provinces.

Mining

Coal and metallic ore mining afforded considerably more employment, while quarries and other non-metallic mineral mines were seasonally slacker. Statements were compiled from 232 operators, with 54,687 employees, or 1,389 more than in their last report. Of the total employees recorded on the date under review, 29,320 belonged in the coal mining, 17,393 in the metallic ore and 7,974 in the non-metallic mineral group. Additions to staffs had also been indicated on November 1, 1929, but the index then was above its level at the time of writing.

Communications

Telephones and telegraphs showed a small increase, in contrast with the reductions in personnel usually recorded at the time of year. The companies and branches making returns had 31,254 workers in their employ, a gain of 108 since October 1. Conditions continued better than on November 1 of other years of the record, except 1929.

Transportation

Street Railways and Cartage.—There was a decrease in employment in local transportation, according to 152 firms whose staffs declined from 26,117 employees on October 1 to 25,533 at the beginning of November. Losses were reported in all provinces. Activity was less than on the corresponding date in 1929, although the movement then was also unfavourable.

Steam Railways.—Statistics were tabulated from 105 employers in the railway operation group, in which their payrolls decreased by 3,574 persons to 78,479 on November 1. This decline was general in scope, but the greatest losses were in Ontario and the Western Provinces. Employment was not so active as in the autumn of 1929, when less pronounced contractions had been recorded.

Shipping and Stevedoring.—Curtailment was noted in water transportation, 85 companies employing 18,391 workers, as compared with 19,028 in the preceding month. Ontario and British Columbia reported reduced activity. Gains were shown on November 1 last year, and employment then was at a higher level.

Construction and Maintenance

Building.—There was a considerable decrease in building, 4,558 persons being let out from the forces of the 726 co-operating contractors, who had 56,507 employees, a number considerably less than that reported at the beginning of November, 1929, although the index was higher than in the autumn of other years of the record. The largest decline took place in Ontario and the Prairie Provinces.

Highways.—Work on highways and streets again declined seasonally, in spite of unemployment relief work; the reductions involved a greater number of workers than those reported in the autumn of 1929, but employment on November 1, 1930, was in greater volume than in any previous year for which data are available. Statements were tabulated from 277 employers, whose staffs, standing at 44,027, were smaller by 6,723 persons than on October 1. All provinces shared in the downward movement, which was most pronounced in Quebec and Ontario.

Railways.—Further curtailment of railway construction work was recorded, especially in Ontario and the Prairie Provinces, while slight improvement was reported in Quebec. The forces of the 58 companies and divisional superintendents furnishing returns declined from 45,582 persons on October 1, to 42,989 at the beginning of November. This shrinkage was much less than that registered on the corresponding date in 1929, when the level of employment was rather higher.

Services

There were continued decreases in the personnel of hotels and restaurants, as the tourist and vacation season closed; 237 firms in the service division employed 21,598 persons, as against 23,337 at the beginning of October. The index was higher than on November 1 in other years of the record, except 1929.

Trade

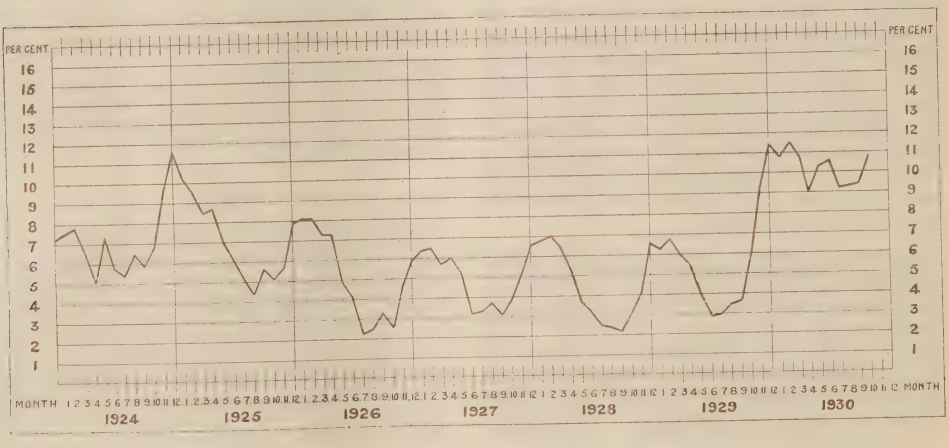
The trend of employment in trade continued upward, 914 workers being added to the forces of the 757 retail and wholesale establishments furnishing returns, whose staffs aggregated 89,159. The advance took place in the former division. The index was slightly less than on November 1, 1929, but was higher than in any other November on record. Further pronounced gains in employment may be expected during the next few weeks, in preparation for the Christmas and holiday trade. The increases recorded on the corresponding date last year gave employment to a larger number of workers.

Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

(2) Unemployment in Trade Unions at the Close of October, 1930

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.



Unemployment among local trade unions at the close of October showed a slight increase from the preceding month, the 1,780 labour organizations, with 207,433 members, from which reports were tabulated, indicating 10·8 per cent of idleness, in contrast with 9·4 per cent in September. A less favourable situation was registered also in comparison with October last year, when 6·0 per cent of the members reported were without work. The declines in activity recorded from September were fairly generally distributed throughout the country, Nova Scotia unions alone showing an advance in employment, which was but slight, while in the remaining provinces the contractions noted were moderate. Quebec and Ontario unions reported a large share of the increase in idleness shown over October last year, though Saskatchewan, Alberta, British Columbia, Nova Scotia and New Brunswick unions also suffered depression. Manitoba unions, on the other hand, reported a nominal gain in employment available.

Each month a separate compilation is made of unemployment in the largest city in each province except Prince Edward Island. Of these, Montreal unions reported the greatest percentage of idleness of any of the cities used in the comparison, which, however, only moderately exceeded that reported at the close of September. In Halifax and Vancouver unemployment eased off to some extent from September, though the percentages of idleness recorded were substantial and next in line to that indicated in Montreal. Viewed from a percentage basis the most extensive decline in activity was registered by Saint John unions, while in Toronto and Regina contractions of about the same magnitude as in Montreal were noted. In Winnipeg and Edmonton also, minor declines occurred. Halifax, Saint John, Montreal and Toronto unions all reported substantial curtailment of activity from October last year, and in Vancouver, Edmonton and Regina employment showed a moderate drop. Winnipeg, on the contrary, registered nominally improved conditions.

From the chart which accompanies this article it will be noted that the curve of unemployment during October rose slightly from the previous month, indicating a somewhat greater unemployment volume, and at the close of the month rested at a point considerably above that shown in October last year.

Employment in the manufacturing industries showed a slight falling off in October from the previous month as manifest by the reports tabulated from 501 unions, with an aggregate membership of 62,741 persons. Of these 6,731 were idle on the last day of the month, a percentage of 10·7, contrasted with 8·7 per cent of inactivity in September. Garment and iron and steel workers registered reductions in the employment volume affecting the largest number of workers, though among pulp and paper makers, wood, leather and hat and cap makers, bakers and confectioners, metal polishers and unclassified workers some cessation of activity was apparent. On the other hand, conditions for textile, glass and jewellery workers were much improved, and nominal gains were reported by printing tradesmen. Compared with the situation in the manufacturing industries in October, 1929, when 7·8 per cent of the members reported were idle, hat and cap makers, and iron, steel, garment and glass workers recorded employment advances, which however involved but a few workers, while the remaining trades suffered reductions in the volume of work available, the most extensive of which were reflected by

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

pulp and paper makers and printing tradesmen, wood and unclassified workers, and metal polishers.

Reports tabulated from 44 unions of coal miners at the close of October combining a membership of 17,030 persons showed that 326 of their members were idle on the last day of the month, a percentage of 1·9 contrasted with 3·1 per cent of inactivity in September. Nova Scotia, Alberta and British Columbia miners all contributed to this slight increase in employment afforded over September, the British Columbia unions showing the greatest improvement in conditions. The same percentage of idleness was indicated in the mining industry, as a whole, during the month under review as in October a year ago, though variations were apparent in the different provinces, Alberta unions recording minor declines in activity and Nova Scotia slight improvement,

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing.	Lumbering and Logging.	Mining.	Manufacturing industries.	Vegetable products.	Pulp and paper products.	Pulp and paper mill workers.	Printing, publishing and lithographing.	Wood products.	Fibres, textiles and textile products.	Textile workers' carpet workers.	Garment workers.	Hat, cap and glove workers.	Animal products.	Iron and its products.	Non-ferrous metals. October, 1930																																

while in British Columbia all workers were reported busy in both months compared.

Some curtailment in building activities was evident at the close of October from the previous month, according to the reports received from an aggregate of 237 unions with a total membership of 29,204 persons. Of these 9,203 were without employment on the last day of the month, a percentage of 31·5 contrasted with 27·9 per cent of idleness in September. Conditions were much quieter than in October, 1929, when 10·4 per cent of the members reported were idle. Plumbers and steamfitters indicated moderate gains in activity from September, while in all other trades the employment movement was unfavourable. Bridge and structural iron workers and hod carriers and building labourers registered large employment losses from September, but as these tradesmen formed but a small proportion of the total membership included in the building trades they did not affect, to any great extent, the percentage for the group as a whole. Contractions which involved the greatest number of workers, however, were reported by bricklayers, masons and plasterers, and carpenters and joiners. Among granite and stonecutters, and tile layers, lathers and roofers moderate declines were registered, and employment for painters, decorators and paperhangers and electrical workers was slightly reduced. Operations for bricklayers, masons and plasterers, carpenters and joiners, tile layers, lathers and roofers, hod carriers and building labourers, and bridge and structural iron workers were largely restricted as compared with October a year ago, and substantial depression was indicated by painters, decorators and paperhangers and plumbers and steamfitters. Among electrical workers and granite and stonecutters moderate employment recessions occurred.

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and P.E. Island.	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

The transportation industries with 753 unions covering 71,742 members at the close of October reported 4,650 of their members idle, a percentage of 6·5, compared with 5·4 per cent in September and with 5·1 per cent in October, 1929. Steam railway employees, whose returns include about 80 per cent of the entire group membership reporting, navigation workers, and teamsters and chauffeurs all shared in the slight unemployment increase recorded over September while among street and electric railway employees the situation remained unchanged. Some curtailment of activity was noted by navigation workers from October last year, and employment for teamsters and chauffeurs and steam railway employees was at a slightly lower level. Street and electric railway employees, however, were somewhat busier than in October a year ago.

Longshoremen whose returns are tabulated separately each month indicated 17·5 per cent of unemployed members at the close of October, contrasted with percentages of 11·2 in September and with 15·3 in October last year. Reports were received for the month under review from 15 associations of these workers with a membership aggregate of 7,012 persons.

Retail clerks maintained practically the same level of activity during October as in both the previous month and October last year, the 5 unions with 1,290 members, from which reports were received, showing ·1 per cent of idleness compared with a fully employed situation in September and with an

unemployment percentage of .1 in October 1929.

Civic employees were slightly better engaged during October than in either the previous month or October a year ago as shown by the reports tabulated from 66 associations embracing a membership of 7,794 persons. Of these 18 were without work on the last day of the month, a percentage of ·2 contrasted with percentages of ·7 in September and with 1·1 in October last year.

From unions in the miscellaneous group of trades 127 returns were tabulated in October, including a membership of 7,525 persons, 13·3 per cent of whom were idle on the last day of the month, compared with 12·0 per cent of inactivity in September. Hotel and restaurant employees were mainly responsible for the employment drop from September, though fractional contractions in activity were shown by barbers and stationary engineers and firemen. Unemployment for theatre and stage employees and unclassified workers was, however, in somewhat lesser volume. All trades participated in the adverse employment movement shown in comparison with October last year when the percentage of idleness in the miscellaneous group as a whole stood at 4·5. In this comparison hotel and restaurant employees, theatre and stage employees, stationary engineers and firemen and unclassified workers all recorded marked slackness from October last year, while the recessions among barbers were slight.

The 4 unions of fishermen from which reports were received at the close of October covering 1,313 members, indicated 2·3 per cent of their members idle, compared with 1·5 per cent in September and with 2·9 per cent in October, 1929.

Noteworthy improvement in conditions was reported by lumber workers and loggers during October from the previous month, the 3 unions, with 788 members, from which reports were tabulated showing 8·6 per cent of unemployment, compared with 17·2 per cent in September. The situation, however, was less favourable than in October a year ago when 1·9 per cent of inactivity was recorded.

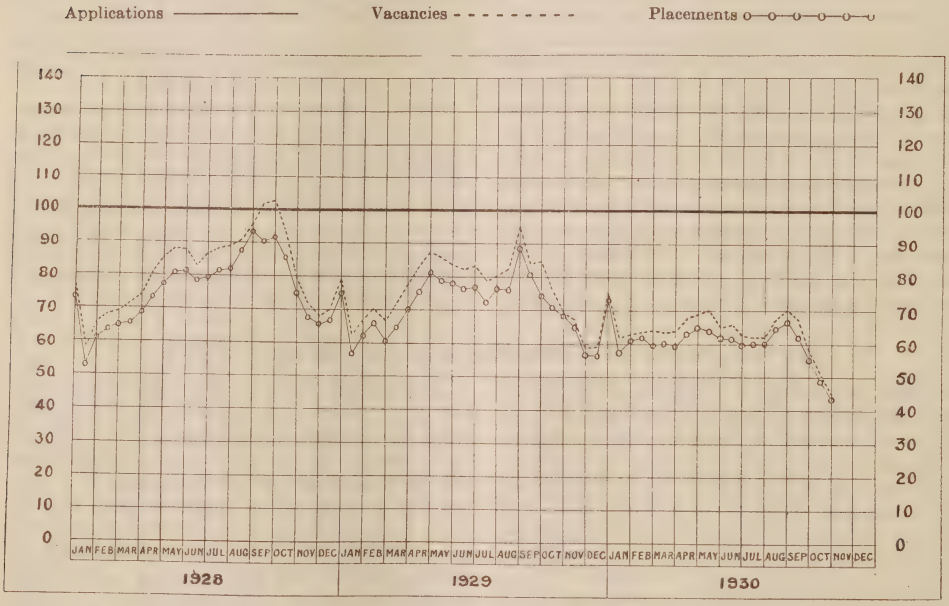
Table II shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1929 inclusive, and also the percentage of unemployment by provinces for October of each year from 1919 to 1927 inclusive and for each month from January, 1928, to date. Table I summarizes the returns in the various groups of industries for the same months as in Table II.

(3) Employment Office Reports for October, 1930

During the month of October, 1930, reports from the offices of the Employment Service of Canada showed a decrease from the preceding month and also from October last year of 13 per cent in the average daily placements effected. The decline from September was due chiefly to curtailment in farming operations, though manufacturing and transportation also showed fewer placements. These losses were counteracted in part by gains in all remaining groups, the largest of which was in construction and maintenance. In comparison with last year, all groups except farming, mining and construction and maintenance, recorded fewer placements, the gain in the last mentioned group being in the highway division, where relief work had been carried on by the different municipalities. Of the groups which registered declines, that in logging was the most pronounced.

The accompanying chart shows the trend of employment since January, 1928, as represented by the ratio of vacancies notified and of placements effected for each one hundred applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted that the curves of vacancies and placements in relation to applications declined sharply throughout the period and at the end of the month under review were more than 24 points below the levels attained at the close of October a year ago. The ratio of vacancies to each one hundred applications was 50·5 during the first half and 45·1 during the second half of October, 1930, in contrast with ratios of 76·5 and 69·3 during the corresponding periods of 1929. The ratios of placements to each one hundred applications during the periods under review were 48·8 and 43·7 as compared with 71·0 and 68·6 during the corresponding month of 1929.

The average number of vacancies reported daily by employers to the Offices of the Service throughout Canada during October, 1930, was 1,195, as compared with 1,427 during the preceding month and with 1,397 in October a year ago.



The average number of applications for employment received daily by the Offices during the month under review was 2,519 in comparison with 2,270 in September, 1930, and with 1,914 during October last year.

The average number of placements made daily by the Offices of the Service during October, 1930, was 1,157, of which 524 were in regular employment and 633 in work of one week's duration or less, as compared with a total daily average of 1,335 during the preceding month. Placements in October a year

ago averaged 1,336 daily, consisting of 859 placements in regular and 477 in casual employment.

During the month of October, 1930, the Offices of the Employment Service referred 32,874 persons to vacancies and effected a total of 31,221 placements. Of these, the placements in regular employment were 14,128, of which 10,288 were of men and 3,840 were of women, while placements in casual work totalled 17,093. The number of vacancies reported by employers was 22,793 for men and 9,466 for women, a total of 32,259, while applications for work numbered 67,996 of which 52,828 were from men and 15,168 from women.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1920, to date:—

Year	Placements		
	Regular	Casual	Totals
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926	300,226	109,929	410,155
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930 (10 months)	159,725	118,646	278,371

Nova Scotia

During the month of October, positions offered through employment offices in Nova Scotia were over 26 per cent higher than in the preceding month, but nearly 12 per cent less than during the corresponding month of last year. Placements also showed a gain of 35 per cent in comparison with September, but a decline of over 13 per cent when compared with October, 1929. Placements of building construction workers were considerably less than during the corresponding month of last year and the decline in this group was responsible for the decrease for the province as a whole, although there were also fewer placements of farm workers. These losses were offset in part by gains under transportation, services and trade. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 41; transportation, 86; construction and maintenance, 72; trade, 81; and services, 484, of which 386 were of household workers. During the month 65 men and 102 women were placed in regular employment.

New Brunswick

There was a gain of over 1 per cent in the number of positions offered through employment offices in New Brunswick during October, when compared with the preceding month, but a decline of 1 per cent in comparison with

the corresponding month of last year. Placements were over 3 per cent higher than in September, but nearly 8 per cent less than in October, 1929. Services was the only group to show any gain of importance in placements over October of last year, although there was an increase also under construction and maintenance. Logging showed the largest decline in placements, with somewhat smaller reductions in transportation, farming and manufacturing. Placements by industrial divisions included: manufacturing, 20; construction and maintenance, 65; and services, 622, of which 454 were of household workers. Placements in regular employment numbered 64 of men and 72 of women.

QUEBEC

Orders listed at the employment offices in the Province of Quebec called for nearly 14 per cent less workers than in the preceding month and nearly 41 per cent less than in the corresponding month of last year. There was a decline also in placements of nearly 6 per cent, when compared with September and of nearly 46 per cent in comparison with October, 1929. The number of bush placements was considerably less than during October of last year and the decline in this group was mainly responsible for the adverse condition under this comparison for the whole province, although there were fewer placements in all other groups except trade, and in this the gain was small. Of the declines in placements, other than in the logging industry, those in construction and maintenance, services and manufacturing were most pronounced. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 76; logging, 510; farming, 35; construction and maintenance, 420; trade, 53; and services, 622, of which 466 were of household workers. During the month 1,121 men and 431 women were placed in regular employment.

ONTARIO

Opportunities for employment, as indicated by orders received at employment offices in Ontario during October, were nearly 20 per cent better than in the preceding month, but were over 19 per cent less plentiful than during the corresponding month of last year. Placements were over 23 per cent higher than in September, but over 5 per cent less than in October, 1929. Construction and maintenance and services were the only groups to show any gains in placements over October of last year, those in the former being attributable to road and sewer construction undertaken by municipalities in relief of unemployment. As in the Province of Quebec, placements in the logging industry were considerably less and this decrease was mainly responsible for the decline from October, 1929, in the province as a whole. This decline, however, was augumented by a large decrease in placements in the manufacturing industries, with somewhat smaller losses in transportation, trade and farming. Industrial groups in which most of the placements were effected during the month were: manufacturing, 1,124; logging, 875; farming, 774; mining, 53; transportation, 248; construction and maintenance, 6,013; trade, 564; and services, 5,573, of which 2,798 were of household workers. During the month 4,363 men and 1,673 women were placed in regular employment.

MANITOBA

The number of positions offered through employment offices in Manitoba during October was over 21 per cent less than in the preceding month and over 20 per cent below the corresponding month of last year. Placements were nearly 23 per cent less than in September and over 50 per cent below October, 1929. The most marked decline in placements from October of last year was in the logging industry, bush placements being over 2,000 less than during the corresponding month of 1929. There were, however, fewer placements in all groups except farming, those in services and construction and maintenance being the most important. Industrial groups in which most of the placements were effected during the month were: manufacturing, 67; logging, 102; farming, 582; construction and maintenance, 72; trade, 135; and services, 1,876, of which 1,506 were of household workers. There were 587 men and 497 women placed in regular employment during the month.

SASKATCHEWAN

Employment opportunities, as indicated by orders received at employment offices in Saskatchewan during October, were nearly 45 per cent less favourable than in the preceding month, but nearly 9 per cent more plentiful than during the corresponding month of last year. Placements also were 35 per cent less than in September but over 8 per cent in excess of October, 1929. The gain over October of last year was attributable to increased placements in the highway and railway divisions of construction and maintenance on work undertaken in relief of unemployment, although improvement was also noted in trade, farming and mining. There were fewer placements in services, transportation, logging

and manufacturing than during October, 1929. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 87; farming, 544; transportation, 104; construction and maintenance, 873; trade, 205; and services, 1,134, of which 586 were of household workers. Regular employment was procured for 913 men and 385 women during the month.

Alberta

Alberta orders during October called for over 39 per cent less workers than those received during the preceding month, but over 16 per cent more than during the corresponding month of last year. Placements were nearly 40 per cent less than in September, but nearly 16 per cent higher than in October, 1929. Farming and construction and maintenance showed the largest gains in placements over October of last year. There was an increase also of placements in mining and logging. Of the declines in all other groups, those in services, trade and transportation were the most important. Placements by industrial divisions included: manufacturing, 113; logging, 84; farming, 1,711; mining, 282; transportation, 33; construction and maintenance, 908; trade, 68; and services, 854, of which 593 were of household workers. There were 2,352 men and 362 women placed in regular employment.

British Columbia

There was a decline of 2 per cent in the number of positions offered through employment offices in British Columbia during October, when compared with the preceding month and of over 11 per cent in comparison with the corresponding month of last year. Placements were nearly 1 per cent less than in September and nearly 9 per cent below October, 1929. Construction and maintenance were the only group in which more placements were made during the month under review than October of last year, and this increase was attributable to work undertaken for the relief of unemployment. The gain in this group, although substantial, was more than offset by declines in all other divisions, of which those in manufacturing, logging and trade were the most substantial. Placements by industrial divisions included: manufacturing, 163; logging, 167; farming, 151; transportation, 210; construction and maintenance, 984; trade, 64; and services, 1,032, of which 564 were of household workers. Regular employment was found for 823 men and 318 women during the month.

Movement of Labour

During the month of October, 1930, the offices of the Employment Service of Canada made 14,128 placements in regular employment, 6,625 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 912 were granted the Employment Service reduced transportation rate, 747 travelling to points within the same province as the despatching office and 165 to other provinces. The reduced transportation rate, which is 2·7 cents per mile, with a minimum fare of $4, is granted by the railroad companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

All transfers effected by Quebec offices during October were of bushmen, numbering 132, of whom 88 proceeded to provincial situations and 44 to employment outside the province. Provincially, 43 travelled from Quebec, 35 from Montreal and 10 from Amos to points within their respective zones. The Hull office was responsible for the movement outside the province, the 44 bushmen who received certificates being carried at the reduced rate to Pembroke and vicinity.

Of the 330 persons who benefited by the Employment Service reduced rate in Ontario during October, 310 travelled to centres within the province and 20 to other provinces. Included in the provincial transfers were 255 bush workers, 181 of whom were sent to Sudbury and surrounding territory, 62 to Port Arthur, and 6 each to the Cobalt and Timmins zones. The Sudbury, Port Arthur, Ottawa and North Bay offices combined to effect these transfers. From Sudbury also one carpenter was despatched to Sault Ste. Marie; from Port Arthur one teamster to a point within its own zone; and from North Bay three bricklayers and one farm hand to Cobalt and 6 bricklayers to Timmins. Securing certificates at Pembroke 8 paper mill workers and one bridge man went to Timmins, one building construction worker to Sudbury and 5 pile drivers within the Pembroke zone. The Toronto office despatched 11 electricians to Port Arthur and 3 machinists to Sudbury, and Cobalt 13 rock drillers to Timmins. The remaining transfer within the province was of a hotel cook who journeyed from Fort William to a point within the same zone. The Winnipeg zone received 17 of the workers going to employment outside the province, 16 of whom were mine workers transported from Timmins and one a mechanic despatched from Fort

William. In addition Cobalt transferred 3 rock drillers to Quebec.

The movement of labour both within the Province of Manitoba and to points outside during October was from Winnipeg and comprised the transfer of 164 persons. Of these 77 were destined to provincial employment and 87 to other provinces. Included in the latter were 72 bushmen and 2 farm hands proceeding to Port Arthur, 2 farm hands to Estevan, 6 farm hands and one cook to Regina, 2 marble setters and one farm hand to Saskatoon and one farm hand to Swift Current. Provincially the Dauphin zone received 4 farm hands, 3 farm household workers and one hotel waitress, and Brandon one farm hand and one highway construction cook, while to points within the Winnipeg zone 57 farm hands, 2 farm domestics, 5 bushmen, one miner, one teamster and one electrician were conveyed at the special rate.

Certificates to the number of 56 were granted by Saskatchewan offices during October, all of which were issued to provincial points. Travelling from Regina 2 engineers and one truck driver went to North Battleford, 1 domestic to Swift Current, 2 bush workers to Prince Albert, 2 line men to Saskatoon, one domestic and one labourer to Moose Jaw, one hotel waitress to Estevan and one domestic within the Regina zone. The Prince Albert office despatched one highway construction cook to Regina and 6 bush workers within its own zone, which zone also received one bushman from Moose Jaw. The balance of this movement included 34 farm hands and 2 farm domestics proceeding to employment at various points throughout the province, who received their certificates for the most part at Saskatoon and Regina.

By offices in Alberta 179 transfers at the reduced rate were effected during October, 165 provincial and 14 interprovincial. The Edmonton office granted certificates to 156 persons travelling within the province, 2 of whom were farm hands going to Drumheller, while the various points within its own zone Edmonton despatched 84 farm hands, 4 farm domestics, 28 bush workers, 14 bridge construction workers, 3 maids, 11 mine workers, one waitress, 7 saw mill workers, one railway construction labourer and one axe-man. In addition, the Edmonton zone received from Calgary 6 farm hands, one farm housekeeper, one hotel cook and one mine cook. Journeying outside the province from Edmonton 13 farm hands went to Saskatoon and surrounding districts, while from Calgary one housemaid was sent to Nelson.

The business transacted by British Columbia offices in October involved an issue of 51 reduced rate certificates, all of which were granted to workers going to provincial employment. Of these Vancouver transferred 14 building construction workers, 3 electricians, one flunkey, one carpenter, one steel sharpener, one labourer, one farm hand, and one town housekeeper to Nelson; 2 carpenters and one plasterer to Revelstoke; one farm hand to Kamloops; one engineer to Penticton; and 8 bush workers, 2 tunnel construction labourers, one sawyer, one machinist, one plasterer, one steel worker, and one flunkey to centres within the Vancouver zone. The remaining certificates were granted at Prince George to 8 saw mill labourers going to employment within the same zone.

Of the 912 workers who took advantage of the Employment Service reduced transportation rate during October 542 were conveyed by the Canadian National Railways, 314 by the Canadian Pacific Railway Company, 47 by the Timiskaming and Northern Ontario Railway, 8 by the Pacific Great Eastern Railway and one by the Northern Alberta Railway.

(4) Building Permits Issued in Canada During October, 1930

The estimated value of the building authorized by 61 cities during October was $12,723,789; this was an increase of $1,162,083, or 14·8 per cent, as compared with the September total of $11,081,706, but a decrease of $5,349,589, or 29·6 per cent, as compared with the aggregate of $18,073,378 for October, 1929. The cumulative total for the elapsed ten months of 1930 was slightly greater than the average for the same period in the ten years, 1920-1929, although it was exceeded by the aggregates for this period of the years 1929, 1928 and 1927.

Some 50 cities furnished detailed statistics, showing that they had issued nearly 1,200 permits for dwellings estimated to cost approximately $5,500,000, and about 3,000 permits for other buildings valued at over $6,000,000. During September, authority was granted for the erection of about 1,100 dwellings and 3,000 other buildings, estimated to cost approximately $4,800,000 and $6,000,000, respectively.

New Brunswick, Quebec and Ontario registered increases in the value of authorized building as compared with September, 1930, that of $2,811,641 or 94·3 per cent in Quebec being most noteworthy. The greatest decrease in this comparison was that of $713,595 or 63·2 per cent in Alberta.

In the comparison with October, 1929, there were gains of 28·6 per cent and 5·3 per cent in New Brunswick and Quebec, respectively; the other provinces recorded declines, that of $3,381,475, or 43·8 per cent in Ontario being most pronounced.

Montreal showed improvement over both September, 1930, and October, 1929; in Toronto, there was an increase over the preceding month, but a reduction as compared with the same month in 1929, while in Winnipeg and Vancouver the totals were lower than in either comparison. Of the other centres, New Glasgow, Moncton, Brantford, Hamilton, Kitchener, Niagara Falls, Sault Ste. Marie, Moose Jaw, Lethbridge, Nanaimo and North Vancouver reported increases over September, 1930, and October, 1929.

Cumulative Record for First Ten Months, 1930.—The following table gives the value of the building authorized by 61 cities during October and in the first ten months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first ten months of the years since 1920 are also given (average 1926=100).

Year	Value of permits issued in October	Value of permits issued in first ten months	Indexes of value of permits issued first ten months (1920=100)	Average indexes of wholesale prices of building materials in first ten months (Average 1926=100)
	$	$

1922	10,737,525	127,515,975	119·7	108·6
1921	10,491,228	99,064,670	93·7	125·2
1920	10,401,041	106,547,319	100·0	154·4

The aggregate for the first ten months of this year was 33·1 per cent lower than in 1929, the previous high level of the record, but was slightly higher than the ten-year average of $135,719,795, while the average index number of wholesale prices of building materials continued lower than in any other year since 1920.

The accompanying table gives the value of the building permits issued by 61 cities during September and October, 1930, and October, 1929. The 35 cities for which records are available since 1910 are marked with asterisks.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary, showing the employment situation during October is reproduced below. The following report on unemployment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment in selected manufacturing industries throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for November, 1930, and previous months are reproduced below.

Great Britain

Employment continued to decline in October. There was a continuance of the seasonal increase in the numbers unemployed in the building industry, in public works contracting, brick, tile, and cement manufacture, the transport and distributive trades, and in hotel and boarding-house service. Unemployment also increased in most of the mining industries, including coal mining, in iron and steel manufacture, in general, marine and constructional engineering shipbuilding and ship-repairing, artificial silk yarn, and hat and cap manufacture, and in dock and harbour service.

On the other hand, there was an improvement in the pottery and motor vehicle industries, in the cotton, woollen and worsted, linen, jute, hosiery, lace and carpet industries; in silk manufacture, and artificial silk weaving, and in the tailoring, and boot and shoe industries.

Among the workpeople, numbering approximately 12,400,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at October 27, 1930 (including those temporarily stopped as well as those wholly unemployed) was 18.7, as compared with 17.6 (revised figures) at September 22, 1930, and with 10.3 at October 21, 1929. The percentage wholly unemployed at October 27, 1930, was 13.9, as compared with 12.7 at September 22, 1930; while the percentage temporarily stopped was 4.8, as compared with 4.9. For males alone the percentage at October 27, 1930 was 19.4, and for females 16.8; at September 22, 1930, the corresponding percentages were 18.0 and 16.8.

At October 27, 1930, the numbers of persons on the registers of Employment Exchanges in Great Britain were 1,551,095 wholly unemployed, 581,614 temporarily stopped, and 104,792 normally in casual employment, making a total of 2,237,501. This was 127,843 more than a month before, and 1,003,113 more than a year before. The total included 1,621,578 men, 60,232 boys, 504,501 women and 51,190 girls.

The 1,551,095 wholly unemployed included approximately 1,060,700 insured persons who had paid at least 30 contributions during the preceding two years and therefore satisfied the full contributions condition for the receipt of unemployment benefit; 404,000 insured persons who had paid less than 30 contributions during the preceding two years; and 86,370 uninsured persons. The wholly unemployed claimants for benefit, numbering 1,408,138, included 247,261 men, 6,457 boys 50,757 women, and 3,300 girls who had been on the Register for less than one month.

In Great Britain and Northern Ireland the total number of persons on the registers of employment Exchanges at October 27, 1930, was 2,307,819

United States

Employment in the United States decreased 1.4 per cent in October, 1930, as compared with September, 1930, and pay-roll totals decreased 0.8 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

A separate summary is made of the latest data available relating to all employees, exclusive of executive and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of July and August, 1930, and therefore cannot be included in the general statement for the month of October. The number of employees of Class I railroads as at August 15, totalled 1,497,872, representing a decrease of 1.1 per cent since July 15, 1930. The amount of pay-roll in the entire month of August was $207,828,332, representing a decrease over the previous month of 1.0 per cent.

Employment in manufacturing industries decreased 1·4 per cent in October as compared with September, and payroll totals decreased 2 per cent. These changes are based upon returns made by 13,256 establishments in 54 of the principal manufacturing industries of the United States. These establishments in October had 2,907,026 employees whose combined earnings in one week were $71,243,900.

The Bureau's weighted index of employment for October, 1930, is 78·6, as compared with 79·7 for September, 79·9 for August, and 98·3 for October, 1929; the index of pay-roll totals for October, 1930, is 72·7, as compared with 74·2 for September, 73·9 for August, and 102·3 for October, 1929. The monthly average for 1926 equals 100.

The textile, paper, and tobacco groups of industries each showed a slight increase in employment in October; among the decreases in the remaining nine groups there were three of notable size—4·9 per cent in vehicles, 3·4 per cent in the leather group, and 2·3 per cent in the iron and steel group.

Twenty-three of the 54 separate industries, upon which the manufacturing employment index is based, reported increased employment in October. The chief gains, ranging from 6·9 per cent to 3·5 per cent, were in the following industries: Dyeing and finishing textiles, pianos, silk goods, confectionery, rubber boots and shoes, carpets, and hosiery and knit goods; among the 16 remaining industries showing gains were women's clothing, stoves, millwork, furniture, paper boxes, chemicals, pottery, glass, agricultural implements, and cotton goods, the increase in the last-named industry having been less than one-tenth of 1 per cent.

Outstanding decreases in employment in October were 8·6 per cent in ice cream; from 5 to 5·3 per cent each in woolen and worsted goods, men's clothing, automobiles, and steam-car shops; from 4 to 4·7 per cent each in boots and shoes, petroleum refining, fertilizer, brick, cement, cane-sugar refining, and automobile tires; from 3 to 3·8 per cent each in millinery, cast-iron pipe, machine tools, structural ironwork, and foundry and machine-shop products; 2·4 per cent in shipbuilding and 1·2 per cent in paper and pulp.

Nine additional industries have been taken up during 1929 and 1930 and are not included in the bureau's indexes of employment or pay rolls, no data for 1926, the index-base year, being available. Increases in employment in these industries were reported in October as follows: Radio, 13·5 per cent; jewelry, 2·5 per cent; rubber goods, other, 1·1 per cent; beet sugar, 256·2 per cent, this being the beginning of this industry's refining season. Decreased employment was reported in the remaining 5 industries as follows: 2·6 per cent in rayon; 9·1 per cent in aircraft; 0·5 per cent in paint and varnish; 3·5 per cent in beverages; and 2·4 per cent in cash registers, adding machines, and calculating machines.

The New England, Middle Atlantic, and mountain geographic divisions each reported increased employment in October, while each of the remaining divisions reported a falling off in employment.

The 22·6 per cent increase shown for the mountain division was caused by the addition in this report of the beet-sugar industry, which begins its refining season in October, thereby showing a very large increase in employment over September. The beet-sugar industry is one of the most important manufacturing industries in the mountain district and was added to the bureau's list for that reason to give an adequate representation of employment in that district.

The per cents of change in the mountain district, without beet sugar, would have been decreases of 2·3 per cent in employment and 1·5 per cent in pay-roll totals, respectively.

Unemployment percentage.—Unemployment statistics which are being compiled each month by the American Federation of Labour, indicate the percentage of unemployed union members in twenty-four representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent; October, 1929, 11 per cent; November, 1929, 12 per cent; December, 1929, 16 per cent; January, 1930, 20 per cent; February, 1930, 22 per cent; March, 1930, 21 per cent; April, 1930, 21 per cent; May, 1930, 20 per cent; June, 1930, 20 per cent; July, 1930, 22 per cent; August, 1930, 22 per cent; September, 1930, 21 per cent; October, 1930, 21 per cent; November, 1930, 22 per cent.

Hon. William N. Doak has been appointed Secretary of Labour in the Cabinet of President Hoover, in succession to Hon. John J. Davis, who left the cabinet on his election to the United States Senate. Mr. Doak was formerly a vice-president of the Brotherhood of Railroad Trainmen and its legislative agent, and was the editor of the *Railroad Trainmen*, the monthly magazine published by the trainmen's organization. He was prominently associated with conciliation work in connection with railway labour disputes.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30 last. The text of this measure appeared in the April issue at page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(*a*) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(*b*) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

Section 5 of the Fair Wages and Eight-Hour Day Act authorized the Governor in Council, on the recommendation of the Minister of Labour, to make necessary regulations under the Statute. Those regulations have not yet been made. The Act, however, was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

The Fair Wages Policy of the Government of Canada, which has been in effect since 1900 and is now expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924, requires that all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, drydocks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour here-

under the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

18345—6

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to

report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Installation of radiation, piping, etc., in the Royal Canadian Air Force hangar, Trenton, Ont. Name of contractors, Partridge Sanitary and Heating Engineers, Toronto, Ont. Date of contract, November 11, 1930. Amount of contract, $8,834. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Plumber	$0 90	8
Plumber's helper	0 50	8
Steamfitter	0 90	8
Steamfitter's helper	0 50	8
Mason	1 10	8
Carpenter	0 80	8
Electrician	0 80	8

Supply and erection of steel roof deck, Royal Canadian Hangar, Trenton, Ont. Name of contractors, The Metallic Roofing Co. of Canada, Ltd., Toronto, Ont. Date of contract, November 7, 1930. Amount of contract, $3,581. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Bricklayers	$1 10	8
Bricklayers' labourers	0 50	8
Masons	1 10	8
Masons' labourers	0 50	8
Plasterers	1 10	8
Plumbers	0 70	8
Carpenters	0 80	8
Electricians	0 70	8
Painters & glaziers	0 70	8
Concrete labourers	0 40	8
Ordinary labourers	0 40	8
Sheet metal workers	0 70	8
Roofers—felt and gravel	0 50	8
Roofers—sheet metal	0 70	8
Drivers, 2 horses and wagon	0 75	8
Structural ironworkers	1 00	8

Supply and application of insulation, roofing and flashing of roofs, Royal Canadian Air Force Hangar, Trenton, Ont. Name of contractors, W. A. Moffatt & Sons, Ltd., Toronto, Ont. Date of contract, November 11, 1930. Amount of contract, $4,850. The preceding fair wages schedule was also inserted in this contract.

Construction of discharge sewer, Royal Canadian Naval Barracks, Esquimalt, B.C. Name of contractors, The Kennedy-Leith Construction Co., Victoria, B.C. Date of contract, November 17, 1930. Amount of contract, $3,000. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of a public building at Shawinigan Falls, P.Q. Name of contractor, Mr. Alphonse Daris, Richmond, P.Q. Date of contract, November 12, 1930. Amount of contract, $16,200 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day

Plasterers' helpers	0 55
Painters	0 90
Millwrights	0 90
Electricians	1 10
Caterpiller tractor operators	0 60
Structural steel workers	0 90

Time and one-half to be allowed for time over ten hours, and time and one-half for Sunday time.

Fair Wages Conditions in Harbour Commission Contracts

Under the Fair Wages Order in Council it is provided that certain conditions, referred to therein as "A" conditions, shall, as far as practicable, be observed by the department or departments of Canada, in connection with all agreements made by the Government involving the grant of Dominion public funds in the form of subsidy, advance, loan, or guarantee for any of the purposes mentioned." Under this authority, fair wages conditions are prepared from time to time in the Department of Labour for insertion in contracts awarded by the Harbour Commissions throughout Canada. The labour conditions in question are similar to those which are applicable to contracts awarded by the several departments of the Dominion Government and take the form of either the General Fair Wages Clause or a fair wages schedule.

Returns have been received in the Department of Labour showing that the following construction contracts have been executed recently by Harbour Commissions to which fair wages conditions applied:—

Halifax Harbour Commissioners

Supplying and placing Ogden Turnover Doors in Shed No. 28 of the South Terminals, Halifax, N.S. Name of contractors, J. Edward Ogden Co., Ltd., 111 Saint Paul St. W., Montreal, P.Q. Date of contract, July 24, 1930. Amount of contract, $19,000. A fair wages schedule was inserted in the contract as follows:—

	per day
Driver, horse and cart	6 50
Driver, team and wagon	8 00
	per week
Motor truck drivers	20 00
	per hour
Divers	1 00
Helpers	0 65

(Divers and Helpers to be paid at above rates for the whole day, even if only diving for any part of that day.).

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases, the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given with other information of general interest.

Manufacturing: Printing and Publishing

MONTREAL, QUEBEC.—CERTAIN EMPLOYING PRINTERS AND THE INTERNATIONAL PHOTO ENGRAVERS UNION, LOCAL NO. 9.

This agreement came into effect May 1, 1923, and runs from year to year until either party gives notice of change sixty days before May 1, of any year.

Only union members will be employed, if available, but if unable to secure them, the joint committee of employers and union members will devise means of securing photo engravers without prejudice to either party. Foremen must also be union members.

Hours: 8 per day, 4 on Saturdays, a 44-hour week for day work and 40 hours per week for night work.

Overtime: first three hours, time and one half; after three hours and all work on Sundays and holidays, double time.

Wages for journeymen: $40 per week for day work and $45 per week for night work. Foremen to be paid $5 per week over journeymen's scale.

Those employed in a permanent position are not to be laid off temporarily owing to slackness of work. A permanent position to be considered such when an employee has been employed for a period of six consecutive weeks or more. This clause does not apply to those engaged as extra help for a definite period.

Apprentices to serve at least five years in one shop beginning at the age of sixteen or over. After medical examination of which the union pays the expense, all apprentices will be indentured to both parties to the agreement and be governed by the laws of the union. One apprentice allowed to every five journeymen employed.

Wages per week for apprentices; first year $8, first half of second year $10, last half of second year $12, first half of third year $16, last half of third year $20, first half of fourth year $24, last half of fourth year $28, first half of fifth year $34, last half of fifth year $40.

At least one week's notice will be given of resignation or of discharge.

Union members will not be required to do any work other than what has been done in its entirety by members of this union.

Any dispute not covered by this agreement will be submitted to an arbitration committee consisting of five members of each party, but if they fail to agree, then the president or secretary of the employing photo-engravers association and the president of the International Photo Engravers' Union will choose a disinterested party who will render his decision within three weeks from the date of appointment, such decision to be binding. No strikes or lockouts will occur during the course of arbitration.

Ottawa, Ontario.—Ottawa Newspaper Publishers and the International Printing Pressmen and Assistants' Union Local No. 5.

Agreement to be in effect from September 1, 1929, to August 31, 1931.

Hours: 48 per week for both day and night work.

Overtime: time and one half. Work on Sundays and holidays for evening newspapers, double time.

Wages: journeymen pressmen $43 per week. Wages for foremen and the flyboys will be arranged individually.

Apprentices are to serve five years.

Wages for apprentices: third year $17 per week, fourth year $20, fifth year $22.

Apprentices who have served five years and received their certificate and are unable to secure employment as journeymen may continue to work as apprentices until such employment is obtained.

The principle of interchanging of positions of men on the web machines will be adhered to so that the men may become qualified pressmen.

No strikes or lockouts to occur as long as the agreement is carried out. If any dispute occurs, it will be referred to an arbitration board consisting of one member from each party and a third chosen by them, the decision to be binding.

If at the termination of the agreement, the parties are unable to agree about a new one or a renewal, the matter will be referred to arbitration as provided above.

Manufacturing: Iron, Steel and Products

Montreal, Quebec.—Certain Ornamental and Architectural Iron Firms and the International Association of Bridge, Structural and Ornamental Ironworkers, Local No. 418 (Ornamental Iron Shopmen, Finishers and Helpers).

This agreement was also agreed to in an exchange of correspondence by the Montreal Builders' Exchange in so far as the terms concerned them.

Agreement to be in effect from May 1, 1929, to April 30, 1931. A strike to secure the terms of the agreement in one shop was reported in the Labour Gazette, July, 1929, page 725.

Only union members to be employed as mechanics and helpers.

Hours: 8 per day, 4 on Saturdays, a 44-hour week for outside erection work; for shop work 9 per day, Saturday 4½ hours, a 49½ hour week. When a night gang is employed, they shall work 7½ hours and be paid for 8 hours.

Overtime: time and one half; Sundays and holidays, double time.

Wages per hour: outside finishers 85 cents, outside helpers 60 cents; shopmen finishers—first class 80 cents, second class 70 cents; apprentices with two years' experience and helpers 55 cents.

One apprentice or helper allowed to work with each journeyman on outside work.

For work out of the city, fare and travelling time up to 8 hours per day will be paid.

No employee will be discriminated against for his union activities. Business agents or official representatives of the union may visit all jobs.

Union members do not bind themselves to work on any job where a labour trouble exists.

Construction: Buildings and Structures

Saint John, N.B.—Certain Contractors and the International Brotherhood of Electrical Workers, Local No. 502.

This agreement was in effect from December 1, 1929, to April 30, 1930. On its expiration, negotiations for a new agreement were not completed, but it is reported that the conditions covered by this agreement are still being observed.

Union members to be given the preference when seeking employment.

Hours: 8 per day from 8 a.m. to 5 p.m. Until the majority of the building trades have adopted the Saturday half holiday, straight time will be paid for work on Saturday afternoons from 1 p.m. to 5 p.m. except during the months of June, July, August and September. When special work has to be done at hours other than from 8 a.m. to 5 p.m., an arrangement will be made whereby men will work 8 hours per day and overtime rate will not prevail.

Overtime: time and one-half from 5 p.m. to 10 p.m.: after 10 p.m. and all work on Sundays and holidays, double time.

Wages per hour for journeymen electrical workers: 65 cents. Charge hands to be paid 10 cents per hour over the rate paid the men over whom they have charge. On certain contracts which were contracted for before September 1, 1929, the rates of wages formerly in effect were to prevail.

Wages for apprentices: first year 20 cents per hour, second year 28 cents, third year 36 cents, fourth year 50 cents.

For work out of town, fare, travelling time and board will be paid.

A union member will not be allowed to work after regular working hours without permission from his employer or the union.

Saint John, N.B.—Master Plumbers and the United Association of Plumbers and Steamfitters, Local No. 574.

At the expiration of the previous agreement on July 31, 1930, a dispute arose as to the terms of a new agreement and the matter was referred to a Board under the Industrial Disputes Investigation Act. The award of the Board was printed in the Labour Gazette, November, page 1249, both parties agreeing to accept the terms which are to be in effect to April 30, 1932.

Montreal, Quebec. — Montreal Builders' Exchange and the International Association of Bridge, Structural and Ornamental Ironworkers, Local No. 418 (Ornamental Iron Shopmen, Finishers and Helpers).

The agreement between this local union and certain ornamental and architectural iron firms is summarized above under the heading "Manufacturing: Iron, Steel and Products," and the terms were agreed to by the Montreal Builders' Exchange in an exchange of correspondence in so far as they are concerned in these terms.

TORONTO AND HAMILTON, ONTARIO, AND CERTAIN OTHER CITIES.—THREE ELEVATOR CONSTRUCTION AND MAINTENANCE COMPANIES AND THE INTERNATIONAL UNION OF ELEVATOR CONSTRUCTORS, LOCALS No. 50 (TORONTO), No. 90 (HAMILTON), No. 96 (OTTAWA), No. 89 (MONTREAL), No. 101 (QUEBEC), No. 102 (WINNIPEG) AND No. 82 (VANCOUVER).

The present standard international agreement which was adopted by the international union has been in effect since April, 1929, and is now in effect in the jurisdiction of the above local unions. The agreement is similar to the one previously in effect at Toronto which was summarized in the LABOUR GAZETTE for December, 1927, page 1343, and which was extended to other cities as noted in the LABOUR GAZETTE, June, 1928, page 673, with the following changes:

Hours to be 8 per day with 4 on Saturdays except where any five of the seven specified building trades (viz. bricklayers, plasterers, carpenters, electricians, sheet metal workers, plumbers and steamfitters and iron workers) have obtained the 5-day week, when in such cities there will be no work on Saturdays except for service and emergency work, in which case the time between 8 a.m. and 12 noon will not be classed as overtime. For men on "full maintenance" work, 52 hours per week will be worked with overtime pay only for Sunday work and they will have two weeks' vacation with pay and a limited amount of sick leave.

One apprentice allowed to each employer and one additional apprentice to every eight mechanics employed. Apprentices must be between the ages of 18 and 21 years when they are registered. Apprentices are to serve three years and will be paid as follows: first year 35 per cent of mechanics' rate, second year 50 per cent, third year 70 per cent. After the apprenticeship is completed, the apprentice will be admitted to the union and the employer will pay the initiation fee.

The wage rates in each city are on the same basis as in the previous agreement, that is the average rate of the five highest paid of the seven building trades mentioned above, with the wage for helpers at 70 per cent of the mechanic's rate.

Under this provision the wage rates for mechanics which were reported to be in effect in June, 1930, are as follows: Local No. 50—Toronto, $1.25 per hour; Local No. 90—Hamilton, $1.10, Windsor, $1.37, St. Catharines, $1.10, Kitchener, 91 cents, London, $1.03; Local No. 96—Ottawa, $1.04; Local No. 89—Montreal, $1.07; Local No. 101—Quebec, 84 cents, Halifax, 88 cents; Local No. 102—Winnipeg, $1.28; Local No. 82—Vancouver, $1.15 (increased to $1.25 on October 27).

TORONTO, ONTARIO.—CERTAIN CONTRACTORS AND THE INTERNATIONAL BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS, LOCAL No. 151.

This agreement which was summarized in the LABOUR GAZETTE, December, 1929, page 1414, and was to be in effect until May 1, 1931, was terminated at the end of April, 1930. The increase in wages from 90 cents to $1 per hour which was to be effective on May 1, 1930, under the terms of the agreement, was refused by the employers as the rate generally paid by other contractors was 85 cents per hour, and the agreement was therefore terminated.

VANCOUVER, B.C.—THE CONTRACTING PLASTERERS' ASSOCIATION AND THE OPERATIVE PLASTERERS INTERNATIONAL ASSOCIATION, LOCAL No. 89.

This agreement which was summarized in the LABOUR GAZETTE, November, 1929, page 1284, and which was to have been in effect until August 15, 1931, was terminated September 2, 1930, following 90 days' notice given by the employers.

Transportation and Public Utilities: Water Transportation

SAINT JOHN, N.B.—VARIOUS STEAMSHIP COMPANIES AND THE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL No. 273.

Agreement to be in effect from December 1, 1930, to October 31, 1931, and from year to year until either party serves thirty days' notice before October 31, of any year.

Orders for men to work at stated hours are to be given a certain time before the men are required and the union agrees to have their office open for a short time on Sundays to receive confirmatory orders for Monday requirements.

Hours: 9 per day or night. There will be a half holiday on Saturday from June 1, to September 30, but if a ship is within two hours of finishing, men will work through at double time.

If any gang is required to work through any meal hour, double time will be paid for such meal hour and until relieved. Double time for work on Sundays and holidays, but handling of mails, baggage and express carried by mail or passenger ships will be handled on Saturdays, Sundays and holidays at all times at the prevailing rate of wages, except on Labour Day, when double time will be paid.

Wages: 70 cents per hour for day or night work for handling general cargo and 80 cents per hour for day or night for handling bulk cargo; 10 cents per hour extra to be paid for handling wet hides in bundles and acid phosphate and tankage in bags.

The same men are not to be ordered back to work either day or night while other men are available, except when ship is within three hours of finishing or shifting from berth to berth, the same gangs are to carry on.

No gangs when ordered are subject to cancellation. Except for day work, when ship's representative considers weather conditions prevent working, all men ordered out to work for either day or night work will be paid a minimum of two hours.

No man shall stay in the hold of any ship or vessel while grain is running.

The number of men per gang on different kinds of cargo is specified.

Transportation and Public Utilities: Local Transportation

VANCOUVER, B.C.—GENERAL CARTAGE AND STORAGE ASSOCIATION OF B.C., DUMP TRUCK SECTION, AND THE INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS, LOCAL NO. 466.

Agreement to be in effect from August 1, 1930, to May 1, 1931, and thereafter until notice of change is given by either party 30 days before the expiration date in any year.

Only union members will be employed if available, but if necessary to employ others, they are to apply to join the union within a week. No discrimination will be shown workmen on account of union activity.

The employers reserve the right to discharge men in their employ where the work is not satisfactory.

Hours: 9 per day.

Overtime: first hour at straight time, all other overtime time and one half.

Wages: 2-yard and under Dump truck $4.50 per day or 50 cents per hour, True-Mix truck $5 per day or 55½ cents per hour, 4-yard and over Dump truck $5.40 per day or 60 cents per hour, road spray wagon $6.50 per day or 72½ cents per hour.

All employees are to sign a copy of this agreement and so authorize the employer to deduct from their pay all dues, fines or assessments levied by the union and to hand over such money to the union secretary each month. This clause to be optional for operators.

Should any trouble occur between any firm with which the employers in this agreement are doing business and such firms' employees, the union members parties to this agreement will perform their usual work as if such trouble did not exist, but they will not be asked to do any work that they do not ordinarily perform.

Any dispute occurring between the parties which cannot be adjusted by representatives of the parties will be referred to an arbitration board consisting of one representative of each party and a third chosen by them, whose decision will be final. No cessation of work will occur during the term of this agreement.

Transportation and Public Utilities: Electricity and Gas

HAMILTON, ONTARIO.—HYDRO ELECTRIC COMMISSION OF THE CITY OF HAMILTON AND THEIR EMPLOYEES, MEMBERS OF THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL NO. 138.

This agreement which is in effect from March 1, 1930, to February 28, 1932, and thereafter until 30 days' notice is given by either party, was printed with the report of the Board under the Industrial Disputes Investigation Act in the LABOUR GAZETTE, October, page 1130, the award being accepted by both parties.

Service: Public Administration

WINNIPEG, MANITOBA.—CITY OF WINNIPEG AND THE FEDERATION OF CIVIC EMPLOYEES.

This agreement which is in force for the year 1930 was effected through a Board under the Industrial Disputes Investigation Act and was printed in the LABOUR GAZETTE for June, pages 636 to 642 inclusive.

EDMONTON, ALBERTA.—THE CORPORATION OF THE CITY OF EDMONTON AND THE EDMONTON CIVIC EMPLOYEES' FEDERATION.

The agreement for the year 1930 is similar to that for 1929, which was summarized in the LABOUR GAZETTE, December, 1929, page 1418 (previous agreements having appeared in the LABOUR GAZETTES, November, 1925, and October, 1927) with the following changes:

Civic Employees' Federal Union No. 30

Agreement to be in effect from August 27, 1930, to December 31, 1930, and from year to year thereafter unless on or before January 31, of any year either party gives notice of change and any change agreed to will take effect February 1 of that year.

Wages per hour: casual labourers (less than 12 months) 50 cents, seasonal labourers (12 months and over) 52 cents, permanent labourers and teamsters 52 cents, sewer and water house service construction men 54 cents.

It is provided that a separate classification may be established for a reserve gang composed of men over 60 years of age who have a long service record, who will be paid at the rate of 40 cents per hour.

Policemen's Association, Local No. 74

Constables with over seven years' service $150 per month; nine sergeants received increases from $160 to $165 per month.

A considerable decrease was noted in the number of accidents reported to the Workmen's Compensation Board of Ontario during November; there being 4,708 accidents as compared with 5,758 during October, and 7,006 during November a year ago. The fatal accidents numbered 38, as against 44 last November. The total benefits awarded during November amounted to $592,582.96, $498,144.87 of which was for compensation and $94,438.09 for medical aid. To date this year there have been 64,573 accidents reported, as compared with 80,815 for the same period last year and the total awards for compensation and medical aid amount to $6,792,286.22, as against $7,343,434.69 for the corresponding period of 1929.

PRICES, RETAIL AND WHOLESALE, IN CANADA, NOVEMBER, 1930

Cost of Living, Price of Staple Articles and Index Numbers

THE movement in prices in November was again downward, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower than in October.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was $10.25 at the beginning of November, as compared with $10.32 for October; $11.75 for November, 1929; $11.28 for November, 1928; $11.07 for November, 1927; $11.01 for November, 1926; $11.23 for November, 1925; $10.46 for November, 1924; $10.69 for November, 1923; $10.29 for November, 1922; $11.08 for November, 1921; $15.32 for November, 1920; $16.92 for June, 1920 (the peak); $13.65 for November, 1918; and $7.96 for November, 1914. Of the twenty-nine items in the food budget twenty were lower in price, the most important of these declines being in beef, mutton, pork, cheese, bread, flour, rolled oats, beans, prunes and potatoes. Seasonal increases occurred in the prices of eggs, milk and butter. Including the cost of fuel and rent with that of foods the total budget averaged $20.60 at the beginning of November, as compared with $20.68 for October; $22.03 for November, 1929; $21.52 for November, 1928; $21.27 for November, 1927; $21.24 for November, 1926; $21.51 for November, 1925; $20.81 for November, 1924; $21.19 for November, 1923; $20.89 for November, 1922; $21.60 for November, 1921; $26.13 for November, 1920; $26.92 for July, 1920 (the peak); $21.61 for November, 1918; and $14.36 for November, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was again considerably lower at 79·8 for November, as compared with 81·4 for October; 95·7 for November, 1929; 94·9 for November, 1928; 96·9 for November, 1927; and 97·7 for November, 1926. Forty-seven prices quotations advanced, one hundred and twenty-three were lower and three hundred and thirty-two were unchanged.

In the grouping according to chief component materials five of the eight main groups were lower, two were higher and one was unchanged. The groups which declined were: the Vegetables and Vegetable Products group, due to lower prices for grains, flour, bran, shorts and bread, which more than offset higher prices for rubber, granulated sugar, coffee and hay; the Animals and their Products group, because of reduced quotations for canned salmon, hides, leather and hogs; the Iron and its Products group, due mainly to lower quotations for steel bars, black steel sheets, scrap steel and car axles; the Non-Metallic Minerals and their Products group, because of declines in the prices of brick, crude oil, gasoline, kerosene and asbestos; and the Chemicals and Allied Products group, due to lower prices for arsenious oxide, litharge, potassium iodide and camphor gum. The Wood, Wood Products and Paper group was slightly higher, mainly because of higher prices for ground wood pulp. The Non-Ferrous Metals and their Products group was also slightly higher, due to increased prices for copper, copper sheets, copper wire bars, brass sheets, lead, silver, tin and zinc. The Fibres, Textiles and Textile Products group was unchanged.

In the grouping according to purpose both consumers' goods and producers' goods were lower, the former due mainly to lower quotations for bread, flour, bran, shorts, canned salmon, butter, gasoline, kerosene and crude oil, which more than offset higher prices for milk, fresh eggs, coarse woollen cloth, coffee and granulated sugar. The decline in producers' goods was due mainly to lower prices for lumber, steel bars, cotton thread, raw wool, hides, scrap steel, steel bars, hogs, wheat, oats, flour and asbestos, which more than offset higher prices for raw cotton, raw rubber, raw silk, copper, tin, lead, silver, zinc and ground wood pulp.

In the grouping according to origin domestic farm products, articles of marine origin and articles of mineral origin were lower. Articles of forest origin were slightly higher. Raw and partly manufactured goods showed a substantial decline, due to lower prices for grains, hogs, raw wool, hides, scrap steel and asbestos. Fully and chiefly manufactured goods were slightly lower, due to declines in the prices of flour, bran, shorts, bread, butter, cheese, bricks, gasoline, kerosene and leather.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of November, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set

(Continued on page 1466)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

* Prior to 1926 number of commodities was 236.

(Continued from page 1458)

forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various

authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1928, and monthly since January, 1929. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141·4; 1905, 135·6; 1910, 118·1; 1911, 113·4; 1912, 109·1; 1913, 100·0; 1914, 96·5; 1915, 90·3; 1916, 86·3; 1917, 84·6; 1918, 82·9; 1919, 81·6; 1920, 81·1; 1921, 81·4; 1922, 80·1; 1923, 77·7; 1924, 76·5; 1925, 73·8; 1926, 73·2; 1927, 70·9; 1928, 69·3; 1929, 67·3; 1930, 65·5.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318), and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73·8; 1924, 72·2; 1925, 69·9; 1926, 68·7; 1927, 68·2; 1928, 67·1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98·3; 1915, 98·1; 1916, 96·3; 1917, 100·7; 1918, 107·4; 1919, 111·1; 1920, 125·4; 1921, 143·6; 1922, 140·6; 1923, 135·7; 1924, 134·6; 1925, 131·6; 1926, 131·1; 1927, 129·4; 1928, 127·8. Natural gas, 1913, 100; 1914, 107·0; 1915, 112·5; 1916, 112·5; 1917, 113·9; 1918, 114·0; 1919, 116·1; 1920, 125·1; 1921, 137·6; 1922, 163·2; 1923, 163·0; 1924, 162·2; 1925, 179·3; 1926, 172·4; 1927, 165·9; 1928, 158·6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125·8; 1901, 125·8; 1902, 125·8; 1903, 125·2; 1904, 123·9; 1905, 120·1; 1906,

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

107·5; 1907, 108·8; 1908, 196·9; 1909, 105·7; 1910, 103·8; 1911, 99·4; 1912, 106·6; 1913, 100·0.

Retail Prices

Beef prices continued toward lower levels, sirloin steak averaging 32·4 cents per pound in November, as compared with 34 cents in October; round steak 27·4 cents per pound in November, as compared with 28·9 cents in October; rib roast 25·6 cents per pound in November and 26·7 cents in October; and shoulder roast 19·3 cents per pound in November and 20·2 cents in October. Lower quotations were reported from most localities. Veal and mutton also declined, the former from an average of 22·8 cents per pound in October to 22·4 cents in November, and the latter from 28·2 cents per pound in October to 27·2 cents in November. Fresh leg roast pork was down from an average price of 29·8 cents per pound in October to 28·1 cents in November, while salt pork fell from 27·1 cents per pound in October to 26·8 cents in November.

Eggs showed a substantial seasonal advance, fresh being up in the average from 42·7 cents per dozen in October to 51·3 cents in November, and cooking from 38·0 cents per dozen in October to 43·1 cents in November. Higher prices were reported from practically all localities. Milk rose from an average of 12 cents per quart in October to 12·2 cents in November. Increases were reported from St. Hyacinthe, St. John's, Montreal, North Bay, Sault Ste. Marie and Lethbridge. Dairy butter was up from an average of 34·8 cents per pound in October to 35·5 cents in November, while creamery was slightly higher at 38·9 cents per pound, as compared with 38·7 cents in October. Cheese was down in the average from 30·7 cents per pound in October to 30·1 cents in November.

Bread was again slightly lower at an average price of 6·9 cents per pound in November, as compared with 7·1 cents in October. Decreases were reported from Amherst, Windsor (N.S.), Truro, Fredericton, Sherbrooke, St. John's, Thetford Mines, Ottawa, Belleville, Galt, Stratford, Chatham, Cobalt, Timmins, Brandon, Regina, Nelson, Trail and Nanaimo. Flour was down in the average to 4·1 cents per pound, as compared with 4·3 cents in October and 5·3 cents at the beginning of the year. Somewhat lower prices were reported from most localities. Rolled oats fell from an average price of 5·9 cents per pound in October to 5·6 cents in November. Canned vegetables also were lower, tomatoes being down from an average price of 16 cents per 2½ pound tin to 15·1 cents, peas from 14·6 cents per 2 pound tin

to 13·8 cents, and corn from 16 cents per 2 pound tin to 15·5 cents. Beans were down from an average of 9·2 cents per pound in October to 8·7 cents in November. Potatoes again showed a general decline, averaging $1.34 per ninety pounds in November, as compared with $1.48 in October. Prunes were down from an average price of 14·8 cents per pound in October to 13·9 cents in November. Granulated sugar was unchanged at an average price of 6·4 cents per pound. Anthracite coal showed a slight seasonal advance to $16.14 per ton, as compared with $16.10 in October. Higher quotations were reported from St. John (N.B.), St. Catharines, and Woodstock. A slight decrease in rent was reported from Thetford Mines.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices again moved to lower levels, wheat declining to the lowest point reached since organized trading began in Canada. No. 1 Manitoba Northern wheat averaged 72·5 cents per bushel in October but only 64·4 cents in November, which is slightly less than half the price prevailing at the beginning of the year, and which compares with an average price of 83·1 cents for November, 1913. Large shipments of Russian wheat, together with the uncertainty of conditions in the United States markets, were depressing influences on the market which had been declining for months. Western barley averaged 23·4 cents per bushel in November, as compared with 28·2 cents in October and 56·7 in January; flax averaged $1.05 per bushel in November, as compared with $1.29 in October and $2.52 in January; oats averaged 28·2 cents per bushel in November, as compared with 32·9 cents in October and 59·5 cents in January; and rye averaged 30·7 cents per bushel in November, as compared with 37·4 cents in October and 85·4 cents in January. Flour was down from $6.03 per barrel in October to $5.73 in November, the lowest price recorded since August, 1914. Bran and shorts at Montreal each declined 88 cents per ton, the former to $20.37 and the latter to $21.37. Lower bread prices were reported from Montreal and St. John. Raw sugar at New York advanced from an average price of $1.30 per cwt. to $1.46, while granulated at Montreal rose from $4.51 per cwt. to $4.65. Rubber at New York showed the first advance since February, Ceylon being up from an average price of 8·2 cents per pound in October to 9 cents in November. Coffee at Toronto was up from 16·5 cents per pound to 18 cents. In live stock good steers at Toronto advanced from $7.27 per hundred pounds to $7.37, and at Winnipeg from $5.57 per hundred pounds to $5.87. Lambs at Toronto advanced from $8.26 per hundred pounds to $8.28 and at Winnipeg from $7.24 to $7.66, while hogs at Toronto declined from $11.66 per hundred pounds to $11.22, and at Winnipeg from $10.45 per hundred pounds to $9.11. Good veal calves at Toronto were also lower at $12.11 per hundred pounds, as compared with $12.42. Creamery butter at Toronto was 1 cent per pound lower than in October at 34·1 cents per pound, while at Montreal the price dropped from 33·6 cents per pound to 33 cents. Fresh eggs at Montreal advanced from 52 cents per dozen to 64 cents, at Toronto from 48·3 cents per dozen to 61·3 cents, and at Winnipeg from 42·6 cents per dozen to 46·4 cents. Raw cotton at New York advanced from 10·64 cents per pound to 10·95 cents. The fact that the United States estimate of the 1930 crop indicated the lowest yield since 1924 was said to exert an upward influence on the price, in spite of an increase in the world visible supply. Raw silk was up from $2.80 per pound to $3, while raw wool was 1 cent per pound lower at 14-16 cents. Steel bars declined from $2.30 per hundred pounds to $2.25, and steel sheets from $3.28 per hundred pounds to $3.16. Electrolytic copper at Montreal advanced from $11.35 per hundred pounds to $12.22. This increase was said to coincide with the announcement of an agreement among producers to curtail output.

Mr. H. B. Hachey, officer in charge of a recent expedition sent to Hudson Bay by the Department of Fisheries to study the possibility of establishing fisheries in Hudson Bay, recently made a preliminary report.

It was found that no possibility existed of establishing a fishing industry in Hudson Bay. "A trawler of the type of the *Loubyrne* would operate about ten months of the year on the Atlantic coast. In order that the operation of such a trawler should be a paying proposition, the catch per week should be in the vicinity of one hundred thousand pounds. This catch is usually made in four or five days. The *Loubyrne* was engaged in actual fishing operations in Hudson Bay for twenty-two days. During that time two hundred miles of bottom, representative of the whole region, was efficiently dragged for commercial fish. Added to this, other methods of fishing were indulged in. Not a single commercial fish was taken. Hence it is quite easy to arrive at a definite conclusion that a deep water fishery of commercial importance does not exist in Hudson Bay."

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest quarterly table giving wholesale and retail prices index numbers for various countries appeared in the LABOUR GAZETTE for October.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1924=100, was 68·0 for October, a fall of 2·1 per cent from the September level, continuing the unbroken decline since November, 1929. There were small advances in coal and in foods other than cereals, meat and fish, but all other groups were included in the decline.

The *Statist* index number (in continuation of Sauerbeck's figures), on the base 1867-1877=100, was 90·4 at the end of October. This is a decrease of 0·4 per cent from the end of September. During the month there were declines in all groups except sugar, coffee and tea which advanced 8·9 per cent; this raised the index number for foodstuffs 0·2 per cent. Among industrial materials, minerals showed a fall of 2·0 per cent.

COST OF LIVING.—The Ministry of Labour index number, on the base July, 1914=100, was 157 at November 1, an advance of one point over October 1. The only change was in the food group which was one point higher than at October 1, due to a marked increase in the price of eggs which was partly offset by lower prices for bacon, flour, bread and butter.

France

WHOLESALE PRICES.—The index number of the General Statistical Office, on the base July, 1914=100, was 519 for October, a decline of 3 per cent from September. With the exception of sugar, coffee and cocoa which group was unchanged, all groups showed declines for the month.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 120·2 for October, a fall of 2·1 per cent for the month. Agricultural products fell 3·7 per cent due to substantial falls in vegetable foods and fodder. Among industrial materials, there were marked decreases in non-ferrous metals and textiles.

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 145·4 for October, a fall of 1·0 per cent from September. Declines in food, clothing and sundries were partly offset by small advances in rent and heat and light.

Italy

WHOLESALE PRICES.—The index number of the Milan Chamber of Commerce, on the base 1913=100, was 386·60 for October, a decline of 3 per cent from September. Apart from a small increase in animal foods, all groups contributed to the general decline.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 82·6 for October a fall of 1·9 per cent. All of the ten main groups were included in the general movement, hides and leather products and textile products showing the largest decreases.

The *Annalist* index number on the base 1913=100, was 118·7 for November, a fall of 2·5 per cent from October. Fuels were 6·2 per cent lower and farm products, food products, chemicals and miscellaneous commodities were also lower. There was a slight advance in metals, while textile products and building materials were unchanged.

Dun's index number, showing the estimated cost *per capita* of a year's supply of commodities in wholesale markets was $163·020 at December 1, as compared with $165·188 at November 1. Every group was lower than the month before, with the exception of a slight increase in meat.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 151·9 for October, a fall of 0·5 per cent from September. Food, housing and clothing were lower, while fuel and light and sundries advanced slightly. As compared with October, 1929, the cost of living index number has fallen 7 per cent, the greatest decreases being 10 per cent in food and in clothing.

The index number of the Department of Labour and Industries of Massachusetts, on the base 1913=100, was 153·4 for October as compared with 153·9 for September. There was a slight advance in fuel and light due to higher prices for anthracite coal, but food and clothing and sundries all were lower; shelter was unchanged.

COMPARATIVE PURCHASING POWER OF HOURLY WAGES IN TERMS OF FOOD, ETC., IN VARIOUS COUNTRIES

THE International Labour Office has maintained since 1924 a record of comparative real wages in various countries, originally compiled and published by the British Ministry of Labour in 1923. Summaries of these figures have been given from time to time in the LABOUR GAZETTE, May, 1930, page 594, and in various preceding issues. In 1929, the scope of the statistics was considerably increased by including figures for a larger number of cities in each country, and by increasing the number of commodities for which prices are secured as well as the number of occupations and industries for which wages are secured. From these data an index number of real wages, showing the comparative purchasing power of hourly wages in terms of food, fuel and light and soap have been calculated for each country, taking Great Britain as the standard and therefore represented by 100. The resulting figures for January, 1930, were summarized in the LABOUR GAZETTE for May, 1930.

An international budget of foods, fuel and light and soap was constructed, showing the average quantities of each article ordinarily consumed by the workers and their families in the various countries so far as information was available. The cost of this budget in each country was then calculated, using the average prices in the cities covered. The average hourly wage in each country was calculated from the figures for cities and occupations included, and the purchasing power of wages in each country was determined by dividing the cost of the budget into the average hourly wage. The index number of real wages for each country was determined by taking the figure representing the purchasing power of hourly wages in it and dividing it by the similar figure for Great Britain.

The international budget now used includes twenty-seven foods and fuel (coal or its equivalent), electricity, gas, paraffin oil and soap, there being a calculation for all these items and one for the food separately. The wage data secured include building trades, metal trades, furniture making, printing trades, electrical work, transportation, bakers and civic labourers. The International Labour Office secured the data for prices and wages for July, 1930, also, and published the results of the collection and compilation in the *International Labour Review* for October, 1930, including for each country a table of hourly wages in each city, for each occupation, and a table of the average retail prices of the various commodities, tables of the items in the international budget of foods, etc., its cost in each country, and a table of the index numbers of real wages calculated from such figures. The accompanying table gives index numbers of real wages for each country as published.

It is pointed out by the International Labour Office that the figures issued are subject to important reservations in that they are based on only certain items in the cost of living and on the wages for relatively few classes of labour in the large cities in each country. It is the intention, however, to increase the scope of the figures in both respects with the object of determining as accurately as possible the comparative levels of cost of living and wages, and consequently the relative purchasing power of wages, that is real wages, in each country.

In publishing these figures for July, 1930, the International Labour Office states that some changes have been made in the method of calculation used for January, 1930, so that the resulting index numbers for July, 1930, are not comparable with those for January, 1930.

INDEX NUMBERS OF THE RELATIVE LEVELS OF REAL WAGES IN THE LARGE TOWNS OF DIFFERENT COUNTRIES IN JULY, 1930

(Base: Great Britain=100)

Country	Number of towns	Index numbers based on food	Index numbers based on food, fuel, light and soap
Great Britain	7	100	100
Canada	6	157	155
Germany	6	74	73
Austria	3	50	48
Spain	4	43	40
United States	10	188	190
Irish Free State	3	95	93
Italy	6	45	39
Netherlands	4	84	82
[1]Denmark	1	115	113
Poland	4	66	61
[1]Sweden	3	109	109
Yugoslavia	3	49	45

([1]) Index numbers for these countries are calculated from actual earnings in each. It is stated the figures would be somewhat lower if based on actual earnings in Great Britain instead of on wage rates in Great Britain.

RECENT LEGAL DECISIONS AFFECTING LABOUR

No Contractual Liability Rests on Parties to Union Agreement

THE judgment of the Judicial Committee of the Privy Council in the case *Young versus Canadian Northern Railway Company,* in the appeal by the plaintiff from a decision of the Manitoba Court of Appeal, was delivered on November 25. The decision of the Canadian courts is affirmed, the appeal being dismissed with costs. The previous stages of this case were reported in the LABOUR GAZETTE, as follows:—leave to appeal to the Privy Council granted by Chief Justice Prendergast, in the issue of April, 1930, page 474; judgment of Manitoba Court of Appeal, delivered by Mr. Justice Fullerton, in the issue of March, 1930, page 355; judgment of Court of King's Bench (delivered by Mr. Justice Dysart), in the issue of July, 1929, page 832.

Present at the hearing before the Judicial Committee of the Privy Council were Viscount Dunedin, Lord Blanesburgh, Lord Tomlin, Lord Russell of Killowen and Chief Justice Anglin. The following judgment was delivered by Lord Russell of Killowen:—

Text of Judgment

In this case the appellant, who had been in the employ of the respondents (hereinafter called the railway company) as a machinist, sued the railway company for damages for wrongful dismissal and for other relief. His Action was tried in the Court of King's Bench for Manitoba by Dysart J. and was dismissed. An appeal from that judgment to the Court of Appeal for Manitoba was also dismissed. The appellant has now, with the leave of the Court of Appeal, appealed to His Majesty in Council.

The appellant entered the service of the railway company in June, 1920, having a few days before arrived in Canada from England. He left its employ on the 13th June, 1927, pursuant to a notice dated the 9th June, 1927, in the following terms:—"Your services will not be required after 5 p.m. on the 13th June, 1927, on account of reduction of staff."

The appellant's claim that this notice operated as a wrongful dismissal was founded upon the allegations: (1) that the railway company was bound contractually to him not to reduce staff by dismissing him while retaining in its service men junior to him; (2) that men junior to him had been retained; and (3) that his "seniority rights" had thereby been violated.

A considerable number of other points were raised, and some of them were argued before the Board; but all are, in their Lordship's view, subsidiary to the question, whether or not the railway company had bound itself to the appellant in the manner indicated. If in truth there was no such contractual obligation between the parties to this action, none of the other questions call for consideration or decision.

According to the evidence, all that passed when the appellant was engaged was this:—The appellant saw a Mr. Hough and signed a form of application for employment. He was told to start the following morning. He then asked what wages he was going to receive. "Hough's reply was I would receive the going rate, the machinist's rate." There was no written agreement between the appellant and the railway company.

It is evident that the suggested contractual obligation is not capable of being established merely from what happened on that occasion.

The appellant, however, in support of his claim relies on other matters, to which reference must now be made.

There was in existence a document dated the 12th November, 1919, called "Wage Agreement No. 4." The parties to it were, on the one hand the Canadian Railway War Board, on the other hand a body called "Division No. 4, Railway Employees' Department, American Federation of Labor." The document describes itself as an agreement "in respect to rates of pay, work hours, and conditions of service for employees in the locomotive and car department of the several railways as specified herein": it further states "This agreement shall be effective on the following railways": the railway company being included under "Canadian National Railways." Then follow "Rules" to the number 188.

At the date of this agreement, the Canadian War Board represented the railways of Canada, and when the War Board, in course of time, ceased to exist, the railways of Canada had as their representative in negotiations with representatives of the men, a voluntary association called the Railway Association of Canada.

Division No. 4, Railway Employees' Department, American Federation of Labor (hereinafter called Division No. 4), was a territorial division of a labour organization, whose headquarters were in the United States. Division No. 4 covered the whole of Canada.

At different times variations of the Wage Agreement No. 4 were agreed to between the Railway Association of Canada and Division

No. 4, but for the purposes of this appeal these variations are not material, and Wage Agreement No. 4 need alone be considered.

The appellant alleges that the railway company was contractually bound to him in the terms of Wage Agreement No. 4, and that his dismissal was made in such circumstances that it amounted to a breach by the railway company of certain provisions of Wage Agreement No. 4, more particularly Rules 27, 31, 35, 36 and 37, which he says secured to him his seniority rights and other rights. It does not appear to their Lordships necessary to discuss the question whether the railway company in dismissing the appellant did or did not act in violation of those provisions. For the purposes of this appeal they are prepared to assume this point in the appellant's favour, and to consider this appeal upon the footing that the railway company did, in dismissing the appellant, act in violation of the provisions of Wage Agreement No. 4, assuming them to apply.

The outstanding question for decision is whether the railway company was contractually bound to the appellant in the terms of Wage Agreement No. 4, i.e., whether the contract subsisting between the appellant and the railway company included provisions similar to the provisions of Wage Agreement No. 4. Unless that position can be established the appellant is not in a position to sue the railway company for any alleged breach of those provisions.

The trial judge dismissed the appellant's action upon the ground that, because he was not a member of Division No. 4, he could not claim the benefit of Wage Agreement No. 4.

In the Court of Appeal a variety of opinions combined to defeat the appellant.

Fullerton J. A. (with whom the Chief Justice of Manitoba and Dennistoun J. A., concurred) held that there was no evidence to show that the appellant agreed to work under the conditions fixed by Wage Agreement No. 4, and that any such agreement, if proved, would be unenforceable for want of mutuality.

Trueman J. A. held that the appellant was entitled to enforce against the railway company the provisions of Wage Agreement No. 4, but that under those provisions he had no right at the date of his writ to resort to the law Courts.

Robson J. A. assumed, without deciding the point, that the appellant could enforce against the railway company the provisions of Wage Agreement No. 4. Upon that assumption, he agreed with Trueman J. A. that the appellant had appealed to the wrong tribunal.

Their Lordships feel a doubt whether the true question has really been considered by all the learned judges in the Courts below—viz., whether the appellant has established that the contract for service which existed between himself and the railway company included terms by which the railway company either bound itself to the appellant to observe the provisions of Wage Agreement No. 4, or bound itself to the appellant to observe provisions similar to those contained therein.

If that question be answered in the affirmative, it is immaterial whether the appellant was or was not a member of Division No. 4 or of any other or of no labour organization. Further, if that question be answered in the affirmative, there can be no question of the contract being unenforceable for want of mutuality or otherwise. It is simply a contract of employment which embodies special terms.

On the other hand, if the question be answered in the negative, the action, so far as it depends upon the existence of that contractual obligation on the part of the railway company, must of necessity fail, and no further question can arise.

Before their Lordships' Board the appellant's counsel sought to establish the existence of the necessary contractual obligation from the following facts which, as he claimed, the evidence proved: That the railway company (whose shops were open shops) treated all its employees alike, whether members of Division No. 4 or not; that when the appellant was hired he was promised "the going rate" and was placed as regards salary under "schedule," which meant the Wage Agreement No. 4; that he was placed on the seniority list referred to in Rule 31; that when he was dismissed the railway company gave him the number of days' notice required by Rule 27; that when he complained to various officials of the railway company he was referred to the Committee as provided by Rule 35. From these facts their Lordships were invited to hold that the necessary contractual obligation had been established.

There can be no doubt upon the evidence that in fact, the provisions of Wage Agreement No. 4 were applied by the railway company to all its employees in its locomotive and car department. One extract from the evidence of the general manager (Mr. Tisdale) makes this clear:—

"A. I understand your question to be this: Is the agreement that was negotiated between the railway companies and Division 4 applicable to all the men in the shop?

"Q. Yes?

"A. The answer is Yes."

Their Lordships, however, are unable to treat these matters as establishing contractual liability by the railway company to the appellant. The fact that the railway company applied the agreement to the appellant, is equally consistent with the view that it did so, not because it was bound contractually to apply it to him, but because as a matter of policy it deemed it expedient to apply it to all.

If the conduct of the railway company in applying the provisions of the agreement to the appellant could only be explained by the existence of a contractual obligation to the appellant so to do, it would be not only permissible, but necessary to hold that the existence of the contractual obligation had been established. In the circumstances, however, of the present case, their Lordships find themselves unable so to decide.

But the matter does not quite rest there. When Wage Agreement No. 4 is examined, it does not appear to their Lordships to be a document adapted for conversion into or incorporation with a service agreement, so as to entitle master and servant to enforce *inter se* the terms thereof. It consists of some 188 "Rules," which the railway companies contract with Division No. 4 to observe. It appears to their Lordships to be intended merely to operate as an agreement between a body of employers and a labour organization by which the employers undertake that as regards their workmen, certain rules beneficial to the workmen shall be observed. By itself it constitutes no contract between any individual employee and the Company which employs him. If an employer refused to observe the rules, the effective sequel would be, not an action by an employee, not even an action by Division No. 4 against the employer for specific performance or damages, but the calling of a strike until the grievance was remedied.

If, in the present case, the appellant has suffered any injustice at the hands of the railway company, it was in the power of Division No. 4 to obtain justice for him had they chosen so to do. It is suggested that Division No. 4 chose not so to do, because the appellant was a member of a rival organization. Assuming the suggestion to be well founded, the moral thereby pointed would appear to be that in the case of an "open" shop, the protection which an agreement such as Wage Agreement No. 4 affords to a workman who is not a member of the contracting labour organization, is to be measured by the willingness of that body to enforce it on his behalf.

One more observation remains to be made. Their Lordships have dealt with the case as one in which the wrongfulness of the dismissal depended solely upon the alleged violation of provisions contained in Wage Agreement No. 4. No foundation was laid by the evidence for any claim for damages upon the footing that the length of notice given was insufficient under the actual contract of service which existed between the appellant and the railway company.

In the result their Lordships are of opinion that this appeal should fail and be dismissed with costs; as they have already humbly advised His Majesty.

Reasonable Notice Required of Termination of Contract of Hiring

A brewery Company in Saskatchewan engaged an agent to serve as their sole representative in the province and to perform certain other duties. After about three years they informed him by letter that his employment was to cease in three days, giving no specific reason for his dismissal except "the conditions then existing," but without other assigned cause, and without compensation in lieu of notice. The employee brought action for damges for breach of contract, and the trial judge found in his favour, declaring that there had been a contract of hiring, and fixing the damages at $6,000, with costs. On appeal by the defendant company the Saskatchewan Court of Appeal affirmed the judgment of the lower court. The company based their appeal upon three grounds: (1) that the trial judge erred in holding that the relationship between the plaintiff and defendants was that of master and servant and that he should have held that it was one of principal and agent; (2) that even if the contract between the parties was one of hiring and the relationship that of master and servant, the plaintiff was not entitled to notice of his dismissal; and (3) that in any event the damages were excessive.

Mr. Justice Martin, in the course of his judgment, said:—

"The plaintiff was engaged on December 1, 1927, and was dismissed on October 1, 1929, without notice and without cause; for it is admitted that his services were satisfactory. The plaintiff was entitled to reasonable notice. What is considered reasonable notice varies in different kinds of employment. It is a well-settled rule that menial or domestic servants are entitled to one month's notice, or one month's wages in lieu of notice. There appears, however, to be no settled rule of law as to the length of notice to which a person engaged on a general or yearly hiring in positions superior to that of

a domestic servant is entitled in the absence of some express agreement. The authorities show that the question depends upon the grade of employment. In the case of persons employed as clerks, three months' notice is usually required.

"A school mistress and a commercial traveller have been held entitled to three months' notice. Persons engaged in editorial or literary work have generally been held entitled to six months' notice. No rule however can be laid down which can apply to every case, and the matter is one for the jury, or the judge where there is no jury, to determine what is reasonable under all the circumstances.

"In the present case the plaintiff claims that six months' notice would have been reasonable, and asks for damages in the amount of $9,074. This sum is apparently based upon his earnings for the year 1928, although the earnings in 1929 to October 1 are proportionately higher. The defendant contends that, if the plaintiff was entitled to any notice, he should only be given damages in the amount of $3,200, which, according to the evidence, would have been his commission on the sales made by the defendant to the Liquor Board during the six months following the plaintiff's dismissal. The question of reasonable notice, however, and also assessment of damages, were matters for the consideration of the trial judge, and as I cannot say that the amount allowed is excessive, there appears to be no reason to justify this Court in reducing the amount awarded." *Bole versus Pelissier's Limited* (Saskatchewan), 1930, *Western Weekly Reports,* vol. 3, page 510.

Contractor has no Preferential Claim for Wages in Bankruptcy

Section 121, subsection 3, of the Bankruptcy Act of Ontario establishes a priority in regard to payments made by a trustee in bankruptcy for "all wages, salaries, commissions or compensation of any clerk, servant, travelling salesman, labourer or workman in respect of services rendered to the bankrupt or assignor during three months before the date of the receiving order or assignment." A truck driver who, with his truck, had been employed by George Sexton (who later became bankrupt), asserted a preferential lien in his favour under this provision, but the trustee disputed his right to any preference, alleging that the claimant had worked under a contract, and was not directly employed by Sexton. The opinion of the trustee was sustained by the registrar, whose conclusion, however, was reversed by Mr. Justice Raney, this judgment being in part affirmed on appeal by the Appellate Division of the Supreme Court of Ontario. The circumstances of this case are set forth in the judgment of the Appeal Court, which was delivered by Mr. Justice Masten in part as follows:—

"In his affidavit Gillingham (the claimant) swore that he was employed by Sexton as a truckdriver between the 15th and 29th August, 1929, within 3 months of the date of the receiving order; that he was to be paid $2.50 an hour and was to supply his truck and gas and oil for it; that he was under Sexton's orders at all times and submitted throughout to his supervision and direction; that he was under the immediate charge and direction of Sexton or his foreman, and was in no sense a contractor; that he was employed to haul gravel, and that Sexton or his foreman would direct him where to obtain the gravel and where to deposit it; that he was to do any other work with his truck that he was directed to do by Sexton or whoever was in charge; that he was entirely under the command of Sexton both as to the manner in which he did his work and where the work was to be done, and had no choice as to where he went or what he hauled, and was not at any time paid by the piece or by the job or by the ton; that never at any time was any one else driving his truck during the period mentioned; and that he was always on the job working. . . .

"While the contract is one and single, the obligation on the part of the claimant involves two distinct elements; first, a contract for the service of the claimant in operating his truck; and, second, a contract for the supply and use of his truck in operating condition.

"In the first aspect, the obligation of the claimant is one of service. He is employed to obey his master's orders and submit throughout to his supervision and direction; consequently, he is entitled as a labourer to compensation and to the preference in respect of such compensation as provided in the statute. He cannot be deprived of his right to a preference for his work as a servant because he contracts for the use of his truck. As to the contract for the use of his truck, he is an independent contractor, and the rental for such use does not fall within the provisions of the statute. It is the duty of the Court to divide and apportion the compensation which, under the contract, he is entitled to receive, having regard to the views above expressed. If the parties cannot agree on the proportion of the claim which is properly ascribable to wages, the division will be determined by the Registrar in Bankruptcy after hearing the evidence adduced by the parties.

"The claimant asserted a preference for the whole sum of $246.25—the trustee objected to any preference whatever. Success being divided, the claimant should bear his own costs here and below. The trustee's costs should be paid out of the estate."

Re Sexton (Ontario) 1930, *Ontario Weekly Notes,* vol. 39, page 192.

Employer not Liable for Unauthorized Wrongful Act of Employee

The driver of a motor truck was ordered to pay $3,000 and costs in an action brought in the Ontario Supreme Court in October by a passenger whom he had gratuitously taken for a ride and who was seriously injured in consequence. The action was dismissed as against the employer on the ground that the carrying of passengers was not within the scope of the driver's employment and that the driver had in fact been expressly forbidden to carry passengers. The truck was loaded with iron pipes, on which the passenger was seated, and the driver (in the words of the judgment) "took a corner at such a speed and in such a negligent manner that the chain parted and the pipe upon which the plaintiff was sitting crushed his leg against the cab, seriously injuring him." Mr. Justice Logie, in the course of his judgment, said:—

"A master is liable to third persons for his servant's tortious acts done in the course of his employment, or within the scope of his employment, and for the negligence or other tortious conduct of his servant in doing the class of acts which he was ordered or authorized to do, and it matters not what instructions were given the servant as to the manner in which he should do his duty. It matters not that a servant has abused his authority or exceeded or deviated from his instructions. It is no defence to an action against the master that the servant has done improperly that which he was ordered to do properly; and it is immaterial, except so far as it helps to define the servant's duties, that he received precise instructions, or that he was directed to be careful, or, except in considering what the scope of the servant's employment was, whether he was prohibited from doing the act complained of. But prohibition is relevant in determining whether the wrongful act was or was not a mode of exercising that employment. The maxim *'respondeat superior'* would be nullified if an employer could escape liability by merely enjoining care or caution, or by forbidding any particular act.

"If the unauthorized and wrongful act of the servant is not so connected with the authorized act as to be a mode of doing it, but is an independent act, the master is not responsible: for in such a case the servant is not acting in the course of his employment but has gone outside of it. He can no longer be said to be doing, although in a wrong and unauthorized way, what he was authorized to do; he is doing what he was not authorized to do at all.

"Even an emergency does not give any implied authority to a servant to do that which was not in the course of his employment, although that servant is of opinion that he is acting in his master's interests.

"The case at bar is that of an ordinary 'hitch-hiker' who got on the defendant Leonard's truck by what was a mere caprice of the servant (Johns).

"The master is not liable for the negligence of the servant while the latter is engaged in some act beyond the scope of his employment, for his own purpose, or at his mere caprice, though he may be using the instruments furnished by the master to perform his duties as a servant. The driver of a motor-vehicle sent on a particular mission by its owner is, as a general proposition, acting beyond the scope of his authority when, without the knowledge of his employer, he invites another person to ride with him. If that person is injured through the mere negligence of the driver of the vehicle, the owner will not be liable. The passenger is in the position of a trespasser, or at best a mere licensee, as to whom there is ordinarily no duty except to refrain from wilful or intentional wrong.

"In the case at bar there was an express prohibition by the master to the servant against taking a passenger in the truck, and this affords light on the scope of Johns' employment. Accordingly, the taking of the passenger was not within the scope of the servant's authority, and was not a mode of exercising the master's employment. The servant in taking the plaintiff into the truck was committing an unauthorized and wrongful act, not connected with the employment or with the authorized act of transporting the pipes to Hamilton, but an independent act for which the master was not responsible."

Croton versus Leonard and Johns (Ontario), 1930, *Ontario Weekly Notes,* vol. 39, page 177.

Municipality not Liable for Cost of Unauthorized Medical Treatment

A workman employed by a farmer in Saskatchewan sustained a broken leg, and was brought by his employer to a hospital where he was treated by a doctor for several weeks. The doctor applied to the municipality for the payment of his professional fees under

section 198 of the Rural Municipality Act, which reads:—

"The Council of every municipality shall make due provision for the care and treatment of any person who has been a resident of the municipality for at least thirty days, who falls ill and who is financially incapable of procuring the necessary medical attention and treatment."

The District Court Judge dismissed the claim with costs, and on appeal by the plaintiff the Court of Appeal affirmed this judgment. The evidence showed that the doctor while he was rendering treatment had never communicated with the municipality nor had the municipality authorized him to give such treatment. Mr. Justice Martin, in giving judgment, said: "Section 198 imposes upon a municipality the duty of providing care and treatment; what the indigent's remedy is when the municipality fails in its duty, is not stated, and there is nothing in the section which provides that a physician, without the authority of the municipality, may attend and treat a patient and hold the municipality responsible for his account. Had the legislature intended that medical care could be given indigents without the authority of the municipality and the municipality held responsible for the expense of such care, such intention would have been stated in unmistakable terms. Provision enabling hospitals to collect, under certain conditions and within certain limits, is made by section 199, and this fact furnishes some indication that it was the intention to place hospitals in a different position from that of the medical profession. In my opinion the plaintiff cannot succeed in his claim, on the short ground that no contractual relationship exists between him and the defendant municipality."

Black versus Edenwold Rural Municipality (Saskatchewan) 1930, *Western Weekly Reports*, vol. 3, page 530.

Compensation to be Continued to Workmen Partially Recovered

A bill was introduced in the British Parliament in November to meet the situation arising out of a recent decision of the House of Lords in the case *Bevan versus Nixon Navigation Company*. The judgment found that the plaintiff, a workman who had sustained injuries in the course of his employment, was not entitled to full compensation under the Workmen's Compensation Act because he was fit for lighter and other employment than his usual work, though as a matter of fact he had not been able to find such lighter and other employment.

The bill, which received its second reading on November 15, is to amend the Workmen's Compensation Act, 1925, by providing that if a workman who has so far recovered from the injury as to be fit for employment of a certain kind has failed to obtain such employment, he shall be deemed not to be able to earn wages, and the judge shall order that his incapacity shall, for the purposes of the Act, be treated as total incapacity resulting from the injury for such period as may be provided by the order.

In the course of the debate it was pointed out that in many cases certificates had been given by medical referees that injured men were no longer entitled to full compensation because they were fit for light work: the referees acted in compliance with the law as it stood formerly, but that law, it was declared, was morally wrong; a man with an amputated leg or arm often found it impossible to get work except from a charitable employer.
